Unit C1: Chemistry in Our World	
Higher Tier	
Thursday 15 May 2014 – Morning Time: 1 hour	Paper Reference 5CH1H/01
You must have: Calculator, ruler	Total Marks

Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided
– *there may be more space than you need.*

Information

- The total mark for this paper is 60.
- The marks for **each** question are shown in brackets
– *use this as a guide as to how much time to spend on each question.*
- Questions labelled with an **asterisk** (*) are ones where the quality of your written communication will be assessed
– *you should take particular care with your spelling, punctuation and grammar, as well as the clarity of expression, on these questions.*

Advice

- Read each question carefully before you start to answer it.
- Keep an eye on the time.
- Try to answer every question.
- Check your answers if you have time at the end.

The Periodic Table of the Elements

1	2	3	4	5	6	7	0	
7 Li lithium 3	9 Be beryllium 4	<div style="border: 1px solid black; padding: 2px; margin: 2px;"> <p>1 H hydrogen 1</p> </div>					19 F fluorine 9	4 He helium 2
23 Na sodium 11	24 Mg magnesium 12	<div style="border: 1px solid black; padding: 2px; margin: 2px;"> <p>relative atomic mass atomic symbol name atomic (proton) number</p> </div>					16 O oxygen 8	20 Ne neon 10
39 K potassium 19	40 Ca calcium 20	56 Fe iron 26	55 Mn manganese 25	59 Co cobalt 27	59 Ni nickel 28	63.5 Cu copper 29	35.5 Cl chlorine 17	
85 Rb rubidium 37	88 Sr strontium 38	101 Ru ruthenium 44	[98] Tc technetium 43	103 Rh rhodium 45	106 Pd palladium 46	108 Ag silver 47	40 Ar argon 18	
133 Cs caesium 55	137 Ba barium 56	178 Hf hafnium 72	181 Ta tantalum 73	192 Ir iridium 77	195 Pt platinum 78	197 Au gold 79	84 Kr krypton 36	
[223] Fr francium 87	[226] Ra radium 88	[261] Rf rutherfordium 104	[262] Db dubnium 105	[268] Mt meitnerium 109	[271] Ds darmstadtium 110	[272] Rg roentgenium 111	127 I iodine 53	
							131 Xe xenon 54	
							[222] Rn radon 86	
Elements with atomic numbers 112-116 have been reported but not fully authenticated								

* The lanthanoids (atomic numbers 58-71) and the actinoids (atomic numbers 90-103) have been omitted.

The relative atomic masses of copper and chlorine have not been rounded to the nearest whole number.

BLANK PAGE

Questions begin on next page.

Answer ALL questions

Some questions must be answered with a cross in a box ☒. If you change your mind about an answer, put a line through the box ~~☒~~ and then mark your new answer with a cross ☒.

The Earth's atmosphere

1 The Earth's atmosphere today contains a mixture of different gases.

(a) The pie chart shows the percentages of nitrogen, oxygen and other gases in the atmosphere.

Which row of the table identifies X, Y and Z correctly?

Put a cross (☒) in the box next to your answer.

(1)

	X	Y	Z
<input checked="" type="checkbox"/> A	oxygen	nitrogen	other gases
<input checked="" type="checkbox"/> B	other gases	oxygen	nitrogen
<input checked="" type="checkbox"/> C	oxygen	other gases	nitrogen
<input checked="" type="checkbox"/> D	nitrogen	other gases	oxygen

- (b) (i) The percentage of oxygen in the atmosphere has increased since the Earth's earliest atmosphere.

Describe the process that has caused this change.

(2)

- (ii) Describe a test to show a gas is oxygen.

(2)

- (c) This apparatus is used to find the volume of oxygen in 100 cm³ of air.

When heated, copper reacts with oxygen in the air to form copper oxide.

Syringe A contains 100 cm³ of air, syringe B contains no air.

The hard glass tube contains excess copper.

The copper is heated strongly and the air is passed backwards and forwards over the copper until no more copper reacts.

The apparatus is then left to cool.

- (i) State why an excess of copper must be used.

(1)

(ii) Explain how this experiment can be used to find the volume of oxygen in 100 cm^3 of air.

(2)

.....

.....

.....

.....

(Total for Question 1 = 8 marks)

Materials from the Earth

2 (a) Limestone and marble are naturally occurring forms of calcium carbonate.

(i) Which of the following is the formula of calcium carbonate?

Put a cross (☒) in the box to show your answer.

(1)

A CaCO

B CaCO_2

C CaCO_3

D CaCO_4

(ii) Give a large scale use of limestone.

(1)

(iii) Marble is an example of a metamorphic rock.

Explain how marble is formed from limestone.

(2)

(b) The diagram shows a cross-section through an extinct volcano.

Millions of years ago, molten magma pushed up to the Earth's surface.

The magma cooled and solidified to form rock.

The rock at A and the rock at B differ in appearance.

(i) Describe the appearance of the rock at A and the rock at B.

(1)

(ii) Describe how the magma cooled in different ways to form the rock at A and the rock at B.

(1)

(c) When calcium carbonate is heated calcium oxide is formed.

Calcium oxide reacts with water to form calcium hydroxide.

Write the balanced equation for the reaction of calcium oxide with water to form calcium hydroxide.

(2)

(Total for Question 2 = 8 marks)

Fuels

3 Crude oil is a mixture of hydrocarbons.

(a) Crude oil is separated into fractions by fractional distillation.

The diagram shows a fractional distillation column and the fractions.

There are trends in the properties of the fractions from the top of the column to the bottom of the column.

Which of the following describes a correct trend from top of the column to the bottom?

Put a cross (☒) in the box to show your answer.

- (1)
- A** the boiling points decrease
 - B** the ease of ignition decreases
 - C** the viscosity decreases
 - D** the number of carbon atoms in a molecule decreases

(b) Describe problems caused by one product of the incomplete combustion of a hydrocarbon fuel.

(2)

.....

.....

.....

.....

- (c) (i) When fuel oil is burnt, carbon dioxide is produced and released into the atmosphere.

Explain why some people are concerned about the release of large quantities of carbon dioxide into the atmosphere.

(2)

- (ii) Fuel oil can contain sulfur as an impurity.

Explain how burning this impurity can cause problems in the environment.

(3)

- (d) Crude oil is a source of many fuels.

These fuels are known as fossil fuels.

Describe advantages of replacing fossil fuels with biofuels.

(2)

(Total for Question 3 = 10 marks)

Fuels

- 4 (a) Petrol is obtained by the fractional distillation of crude oil.

One substance present in petrol is octane, C_8H_{18} .

The structure of a molecule of octane is shown.

- (i) Octane is a saturated hydrocarbon.

Explain what is meant by **saturated hydrocarbon**.

(3)

.....

.....

.....

.....

.....

.....

- (ii) Octane is mixed with bromine water and shaken.

Complete the sentence by putting a cross (☒) in the box next to your answer.

On shaking, the colour of the mixture

(1)

- A remains orange
- B remains colourless
- C changes from clear to orange
- D changes from orange to colourless

(b) In the oil industry some fuel oil fraction is converted into petrol.

This is done by heating the fuel oil fraction to thermally decompose it and produce smaller molecules.

(i) State the name given to this process.

(1)

(ii) Give **two** reasons why it is necessary to carry out this process to make more petrol.

(2)

reason 1

reason 2

(c) Methane can be burned in excess oxygen to form carbon dioxide and water.

Write the balanced equation for this reaction.

(3)

(Total for Question 4 = 10 marks)

Acids

- 5 (a) Magnesium carbonate reacts with dilute nitric acid.

Give the names of the products formed in this reaction.

(2)

- (b) Zinc oxide, ZnO , reacts with dilute hydrochloric acid to form zinc chloride, ZnCl_2 , and water.

- (i) Complete the sentence by putting a cross (☒) in the box next to your answer.

This reaction is an example of

(1)

- A** combustion
- B** thermal decomposition
- C** neutralisation
- D** oxidation

- (ii) Write the balanced equation for the reaction between zinc oxide and dilute hydrochloric acid.

(3)

*(c) Electrolysis of hydrochloric acid can produce hydrogen and chlorine.

The apparatus for the electrolysis is

- hydrochloric acid
- two carbon rods
- a suitable container for the electrolysis reaction
- a suitable source of electricity
- test tubes

Describe how the apparatus can be used to electrolyse hydrochloric acid and how the gases produced can be tested to show that they are hydrogen and chlorine.

You may use a diagram to help your answer.

(6)

(Total for Question 5 = 12 marks)

Metals

- 6 (a) In the extraction of tin from tin oxide, tin oxide is heated with carbon.

Complete the sentence by putting a cross (☒) in the box next to your answer.

When the tin oxide reacts with carbon to form the products

(1)

- A** tin is oxidised
- B** tin oxide is reduced
- C** carbon is reduced
- D** carbon dioxide is oxidised

- (b) Pure gold is too soft to be used for some jewellery.

- (i) Gold alloys contain other metals such as copper and silver.

In terms of the arrangement of metal atoms, explain why gold alloys are stronger than pure gold.

(2)

.....

.....

.....

.....

(ii) The purity of gold is often measured in carats.

The data shows how the number of carats is related to the percentage of gold.

number of carats	percentage of gold
24	100
22	92
18	75
9	38

On the grid provided, draw a graph of the percentage of gold against the number of carats.

(2)

(iii) A gold ring is 14 carat gold.

Use the graph to determine the percentage of gold in the ring.

(1)

*(c) Metals are obtained from the Earth's crust by different methods.

Some metals are found uncombined but others have to be extracted from their ores by electrolysis or by heating the ore with carbon.

Explain, using aluminum, gold and iron as examples, how the method used to obtain the metal is related to its position in the reactivity series and to the cost of the extraction process.

(6)

(Total for Question 6 = 12 marks)
