Earthquake magnitude and deaths for selected events since 2001

Ecosystems and environments under threat**Fig. 2****An extract from a 2010 newspaper article about exploitation of a natural resource****Decline in fish stocks even worse than predicted**

The UK's modern fishing fleet must work harder for the same catch as their sail-powered Victorian counterparts. In England and Wales, 19th century fishermen were landing four times as much as today. In 1937, at the peak of the UK's fishing industry, the catch was 14 times what it is now, said a study by the University of York and the Marine Conservation Society. The results, say researchers, indicate that technological developments and the exploitation of new fishing grounds have served to mask the decline of fish in British waters. The availability of certain bottom-living fish [like halibut, turbot, haddock and plaice] has dropped by 94% since the late 1930s.
