Answer booklet (8 pages)

Graph paper

MEI Examination Formulae and Tables (MF2)

INSTRUCTIONS TO CANDIDATES

- Write your name, centre number and candidate number in the spaces provided on the answer booklet.
- Answer **all** the questions.
- You are permitted to use a graphical calculator in this paper.
- Final answers should be given to a degree of accuracy appropriate to the context.

INFORMATION FOR CANDIDATES

- The number of marks is given in brackets [] at the end of each question or part question.
- The total number of marks for this paper is 72.

ADVICE TO CANDIDATES

- Read each question carefully and make sure you know what you have to do before starting your answer.
- You are advised that an answer may receive **no marks** unless you show sufficient detail of the working to indicate that a correct method is being used.

This document consists of **6** printed pages and **2** blank pages.

2

Section A (36 marks)

- 1 Fig.1 shows the graphs of $y = |x|$ and $y = |x - 2| + 1$. The point P is the minimum point of $y = |x - 2| + 1$, and Q is the point of intersection of the two graphs.

Fig. 1

- (i) Write down the coordinates of P. [1]
- (ii) Verify that the y-coordinate of Q is $1\frac{1}{2}$. [4]
- 2 Evaluate $\int_1^2 x^2 \ln x \, dx$, giving your answer in an exact form. [5]
- 3 The value £V of a car is modelled by the equation $V = Ae^{-kt}$, where t is the age of the car in years and A and k are constants. Its value when new is £10 000, and after 3 years its value is £6000.
- (i) Find the values of A and k . [5]
- (ii) Find the age of the car when its value is £2000. [2]
- 4 Use the method of exhaustion to prove the following result.
- No 1- or 2-digit perfect square ends in 2, 3, 7 or 8
- State a generalisation of this result. [3]
- 5 The equation of a curve is $y = \frac{x^2}{2x + 1}$.
- (i) Show that $\frac{dy}{dx} = \frac{2x(x + 1)}{(2x + 1)^2}$. [4]
- (ii) Find the coordinates of the stationary points of the curve. You need not determine their nature. [4]

3

- 6 Fig. 6 shows the triangle OAP, where O is the origin and A is the point $(0, 3)$. The point $P(x, 0)$ moves on the positive x -axis. The point $Q(0, y)$ moves between O and A in such a way that $AQ + AP = 6$.

Fig. 6

- (i) Write down the length AQ in terms of y . Hence find AP in terms of y , and show that

$$(y + 3)^2 = x^2 + 9. \quad [3]$$

- (ii) Use this result to show that $\frac{dy}{dx} = \frac{x}{y + 3}$. [2]

- (iii) When $x = 4$ and $y = 2$, $\frac{dx}{dt} = 2$. Calculate $\frac{dy}{dt}$ at this time. [3]

4

Section B (36 marks)

- 7 Fig. 7 shows part of the curve $y = f(x)$, where $f(x) = x\sqrt{1+x}$. The curve meets the x -axis at the origin and at the point P.

Fig. 7

- (i) Verify that the point P has coordinates $(-1, 0)$. Hence state the domain of the function $f(x)$. [2]
- (ii) Show that $\frac{dy}{dx} = \frac{2+3x}{2\sqrt{1+x}}$. [4]
- (iii) Find the exact coordinates of the turning point of the curve. Hence write down the range of the function. [4]
- (iv) Use the substitution $u = 1 + x$ to show that

$$\int_{-1}^0 x\sqrt{1+x} \, dx = \int_0^1 \left(u^{\frac{3}{2}} - u^{\frac{1}{2}}\right) du.$$

Hence find the area of the region enclosed by the curve and the x -axis. [8]

5

8 Fig. 8 shows part of the curve $y = f(x)$, where

$$f(x) = (e^x - 1)^2 \text{ for } x \geq 0.$$

Fig. 8

- (i) Find $f'(x)$, and hence calculate the gradient of the curve $y = f(x)$ at the origin and at the point $(\ln 2, 1)$. [5]

The function $g(x)$ is defined by $g(x) = \ln(1 + \sqrt{x})$ for $x \geq 0$.

- (ii) Show that $f(x)$ and $g(x)$ are inverse functions. Hence sketch the graph of $y = g(x)$.

Write down the gradient of the curve $y = g(x)$ at the point $(1, \ln 2)$. [5]

- (iii) Show that $\int (e^x - 1)^2 dx = \frac{1}{2}e^{2x} - 2e^x + x + c$.

Hence evaluate $\int_0^{\ln 2} (e^x - 1)^2 dx$, giving your answer in an exact form. [5]

- (iv) Using your answer to part (iii), calculate the area of the region enclosed by the curve $y = g(x)$, the x -axis and the line $x = 1$. [3]
