## General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

# PEARSON EDEXCEL IAL MATHEMATICS

## General Instructions for Marking

1. The total number of marks for the paper is 75
2. The Edexcel Mathematics mark schemes use the following types of marks:

- **M** marks: Method marks are awarded for 'knowing a method and attempting to apply it', unless otherwise indicated.
- **A** marks: Accuracy marks can only be awarded if the relevant method (M) marks have been earned.
- **B** marks are unconditional accuracy marks (independent of M marks)
- Marks should not be subdivided.

3. Abbreviations

These are some of the traditional marking abbreviations that will appear in the mark schemes.

- bod – benefit of doubt
- ft – follow through
- the symbol $\sqrt{}$ will be used for correct ft
- cao – correct answer only
- cso - correct solution only. There must be no errors in this part of the question to obtain this mark
- isw – ignore subsequent working
- awrt – answers which round to
- SC: special case
- oe – or equivalent (and appropriate)
- d… or dep – dependent
- indep – independent
- dp decimal places
- sf significant figures
- * The answer is printed on the paper or ag- answer given
- ∟ or d… The second mark is dependent on gaining the first mark

4. All A marks are 'correct answer only' (cao.), unless shown, for example, as A1 ft to indicate that previous wrong working is to be followed through. After a misread however, the subsequent A marks affected are treated as A ft.

5. For misreading which does not alter the character of a question or materially simplify it, deduct two from any A or B marks gained, in that part of the question affected.

6. If a candidate makes more than one attempt at any question:
    - If all but one attempt is crossed out, mark the attempt which is NOT crossed out.
    - If either all attempts are crossed out or none are crossed out, mark all the attempts and score the highest single attempt.

7. Ignore wrong working or incorrect statements following a correct answer.

# General Principles for Further Pure Mathematics Marking

*(But note that specific mark schemes may sometimes override these general principles).*

## Method mark for solving 3 term quadratic:

### 1. Factorisation

$(x^2+bx+c)=(x+p)(x+q),\ \text{where}\left|pq\right|=\left|c\right|$, leading to x = ...

$(ax^2+bx+c)=(mx+p)(nx+q),\ \text{where}\left|pq\right|=\left|c\right|\ \text{and}\ \left|mn\right|=\left|a\right|$ , leading to x = ...

### 2. Formula

Attempt to use the correct formula (with values for a, b and c).

### 3. Completing the square

Solving $x^2+bx+c=0$ : $\left(x\pm\frac{b}{2}\right)^2\pm q\pm c=0,\ \ q\neq 0$ , leading to x = ...

## Method marks for differentiation and integration:

### 1. Differentiation

Power of at least one term decreased by 1. ( $x^n \rightarrow x^{n-1}$ )

### 2. Integration

Power of at least one term increased by 1. ( $x^n \rightarrow x^{n+1}$ )

## Use of a formula

Where a method involves using a formula that has been learnt, the advice given in recent examiners' reports is that the formula should be quoted first.

Normal marking procedure is as follows:

Method mark for quoting a correct formula and attempting to use it, even if there are small errors in the substitution of values.

Where the formula is not quoted, the method mark can be gained by implication from correct working with values, but may be lost if there is any mistake in the working.

## Exact answers

Examiners' reports have emphasised that where, for example, an exact answer is asked for, or working with surds is clearly required, marks will normally be lost if the candidate resorts to using rounded decimals.

| | **Question 1 Notes** | |
| **1.** | **Note** | Applying eg. $n=1, n=2, n=3$ to the printed equation without applying the standard formulae to give $a=1, b=3, c=-2$ or another combination of these numbers is M0A0M0A0. |
| | **Alt** | **<u>Alternative Method</u>**: Obtains $\sum_{r=1}^{n} r(r^2-3) \equiv \frac{1}{4}n(n+1)\left[n(n+1)-6\right] \equiv \frac{1}{4}n(n+a)(n+b)(n+c)$<br>So $a=1$. $n=1 \Rightarrow -2 = \frac{1}{4}(1)(2)(1+b)(1+c)$ and $n=2 \Rightarrow 0 = \frac{1}{4}(2)(3)(2+b)(2+c)$<br>leading to either $b=-2, c=3$ or $b=3, c=-2$ |
| | **dM1** | **dependent on the previous M mark.**<br>Substitutes in values of $n$ and solves to find $b=...$ and $c=...$ |
| | **A1** | Finds $a=1, b=3, c=-2$ or another combination of these numbers. |
| | **Note** | Using **only** a method of “proof by induction” scores 0 marks unless there is use of the standard formulae when the first M1 may be scored. |
| | **Note** | Allow final dM1A1 for $\frac{1}{4}n^4 + \frac{1}{2}n^3 - \frac{5}{4}n^2 - \frac{3}{2}n$ or $\frac{1}{4}n(n^3+2n^2-5n-6)$<br>or $\frac{1}{4}(n^4+2n^3-5n^2-6n) \rightarrow \frac{1}{4}n(n+1)(n+3)(n-2)$, from no incorrect working. |
| | **Note** | Give final A0 for eg. $\frac{1}{4}n(n+1)\left[n^2+n-6\right] \rightarrow = \frac{1}{4}n(n+1)(x+3)(x-2)$ unless recovered. |

| | Question 2 Notes | |
|---|---|---|
| **2.** (a) | **Note** | You can give B1 for part (a) for correct relevant work seen in either part (a) or part (b) |
| (b) | 1st M1 | Allow a slip when candidates find the $x$ coordinate of their midpoint as long as $0 <$ their midpoint $<$ their $a$ |
| | **Note** | Give 1st M0 if a candidate finds and uses $y = 98$ |
| | 1st A1 | Allow any **exact value** of either $7\sqrt{2}, -7\sqrt{2}, \sqrt{98}, -\sqrt{98}, 14\sqrt{0.5}$, awrt 9.9 or awrt $-9.9$ |
| | **2nd dM1** | Either $\frac{1}{2}\left(2 \times \text{their } "7\sqrt{2}"\right)\left(\text{their } x_{\text{midpoint}}\right)$ or $\frac{1}{2}\left(2 \times \text{their } "7\sqrt{2}"\right)\left(\text{their } "7" - x_{\text{midpoint}}\right)$ |
| | **Note** | Condone area triangle $ABS = \left(7\sqrt{2}\right)\left(\frac{7}{2}\right)$, i.e. $\left(\text{their } "7\sqrt{2}"\right)\left(\frac{\text{their } "7"}{2}\right)$ |
| | 2nd A1 | Allow exact answers such as $\frac{49}{2}\sqrt{2}, \frac{49}{\sqrt{2}}, 24.5\sqrt{2}, \frac{\sqrt{4802}}{2}, \sqrt{\frac{4802}{4}}, 3.5\sqrt{2}, 49\sqrt{\frac{1}{2}}$<br>or $\frac{7}{2}\sqrt{98}$ but do not allow $\frac{1}{2}(3.5)\left(2\sqrt{98}\right)$ seen by itself |
| | **Note** | Give final A0 for finding 34.64823228… without reference to a correct exact value. |

|---|---|---|---|
| **3.** | $f(x)=x^2+\frac{3}{x}-1, \quad x<0$ | | |
| (a) | $f'(x)=2x-3x^{-2}$ | At one of either $x^2 \to \pm Ax$ or $\frac{3}{x} \to \pm Bx^{-2}$ where *A* and *B* are non-zero constants. | M1 |
| | | Correct differentiation | A1 |
| | $f(-1.5)=-0.75$, $f'(-1.5)=-\frac{13}{3}$ | Either $f(-1.5)=-0.75$ or $f'(-1.5)=-\frac{13}{3}$ or awrt $-4.33$ **or a correct numerical expression** for either $f(-1.5)$ or $f'(-1.5)$ **Can be implied by later working** | B1 |
| | $\left\{\alpha \simeq -1.5-\frac{f(-1.5)}{f'(-1.5)}\right\} \Rightarrow \alpha \simeq -1.5-\frac{-0.75}{-4.333333...}$ | **dependent on the previous M mark** Valid attempt at Newton-Raphson using their values of $f(-1.5)$ and $f'(-1.5)$ | dM1 |
| | $\left\{\alpha=-1.67307692... \text{ or } -\frac{87}{52}\right\} \Rightarrow \alpha=-1.67$ | **dependent on all 4 previous marks** $-1.67$ on their first iteration (Ignore any subsequent iterations) | A1 **cso cao** |
| | **Correct differentiation followed by a correct answer scores full marks in (a)**<br>**Correct answer with no working scores no marks in (a)** | | |
| | | | **(5)** |
| (b)<br>**Way 1** | $f(-1.675)= \quad 0.01458022...$<br>$f(-1.665)=-0.0295768...$ | Chooses a suitable interval for *x*, which is within $\pm 0.005$ of their answer to (a) and at least one attempt to evaluate $f(x)$. | M1 |
| | Sign change (positive, negative) (and $f(x)$ is continuous) therefore (a root) $\alpha=-1.67$ (2 dp) | Both values correct awrt (or truncated) 1 sf, sign change and conclusion. | A1 **cso** |
| | | | **(2)** |
| (b)<br>**Way 2** | **Alt 1: Applying Newton-Raphson again** Eg. Using $\alpha=-1.67, -1.673$ or $-\frac{87}{52}$ | | |
| | - $\alpha \simeq -1.67-\frac{-0.007507185629...}{-4.415692926...} \{=-1.671700115...\}$<br>- $\alpha \simeq -1.673-\frac{0.005743106396...}{-4.41783855...} \{=-1.671700019...\}$<br>- $\alpha \simeq -\frac{87}{52}-\frac{0.006082942257...}{-4.417893838...} \{=-1.67170036...\}$ | Evidence of applying Newton-Raphson for a second time on their answer to part (a) | M1 |
| | So $\alpha=-1.67$ (2 dp) | $\alpha=-1.67$ | A1 |
| | | | **(2)** |
| | | | **7** |

| | **Question 3 Notes** | |
|---|---|---|
| **3.** (a) | **Note** | Incorrect differentiation followed by their estimate of $\alpha$ with no evidence of applying the NR formula is final dM0A0. |
| | **B1** | B1 can be given for a correct numerical expression for either $\mathrm{f}(-1.5)$ or $\mathrm{f}'(-1.5)$<br>Eg. either $(-1.5)^2 + \dfrac{3}{(-1.5)} - 1$ or $2(-1.5) - \dfrac{3}{(-1.5)^2}$ are fine for B1. |
| | **Final dM1** | This mark can be implied by applying at least one correct value of either $\mathrm{f}(-1.5)$ or $\mathrm{f}'(-1.5)$ in $-1.5 - \dfrac{\mathrm{f}(-1.5)}{\mathrm{f}'(-1.5)}$. So just $-1.5 - \dfrac{\mathrm{f}(-1.5)}{\mathrm{f}'(-1.5)}$ with an incorrect answer and no other evidence scores final dM0A0. |
| | **Note** | Give final dM0 for applying $1.5 - \dfrac{\mathrm{f}(-1.5)}{\mathrm{f}'(-1.5)}$ without first quoting the correct N-R formula. |
| **3.** (b) | **A1** | **Way 1: correct solution only**<br>Candidate needs to state **both** of their values for $\mathrm{f}(x)$ to awrt (or truncated) 1 sf along with **a reason and conclusion.** Reference to change of sign **or** eg. $\mathrm{f}(-1.675) \times \mathrm{f}(-1.665) < 0$ **or** a diagram **or** $< 0$ and $> 0$ **or** one positive, one negative are sufficient reasons. There must be a (minimal, not incorrect) conclusion, eg. $\alpha = -1.67$, root (or $\alpha$ or part (a)) is correct, QED and a square are all acceptable. Ignore the presence or absence of any reference to continuity.<br>A minimal acceptable reason and conclusion is "change of sign, hence root".<br>No explicit reference to 2 decimal places is required. |
| | **Note** | Stating "root is in between $-1.675$ and $-1.665$" without some reference to $\alpha = -1.67$ is not sufficient for A1 |
| | **Note** | Accept $0.015$ as a correct evaluation of $\mathrm{f}(-1.675)$ |
| | **A1** | **Way 2:** correct solution only<br>Their conclusion in Way 2 needs to convey that they understand that $\alpha = -1.67$ to 2 decimal places. Eg. "therefore my answer to part (a) [which must be $-1.67$] is correct" is fine for A1. |
| | **Note** | $-1.67 - \dfrac{\mathrm{f}(-1.67)}{\mathrm{f}'(1.67)} = -1.67\,(2\text{ dp})$ is sufficient for M1A1 in part (b). |
| | **Note** | The root of $\mathrm{f}(x) = 0$ is $-1.67169988...$, so candidates can also choose $x_1$ which is less than $-1.67169988...$ and choose $x_2$ which is greater than $-1.67169988...$ with both $x_1$ and $x_2$ lying in the interval $\left[-1.675, -1.665\right]$ and evaluate $\mathrm{f}(x_1)$ and $\mathrm{f}(x_2)$. |
| **3.** (b) | **Note** | **Helpful Table** |

| $x$ | $\mathrm{f}(x)$ |
|---|---|
| $-1.675$ | $0.014580224$ |
| $-1.674$ | $0.010161305$ |
| $-1.673$ | $0.005743106$ |

| | | Correct answer in terms of $k$ | A1 |
| | | | **(2)** |
| | | | 5 |

| | | |
|---|---|---|
| | | **Question 4 Notes** |
| **4.** (a) | **B1** | Also allow $k(k+2) - -3$ |
| | **Note** | **Way 2:** Proving $b^2 - 4ac = -8 < 0$ by itself could mean that $\det(\mathbf{A}) > 0$ or $\det(\mathbf{A}) < 0$. |
| | **Note** | To gain the final A1 mark for Way 2, candidates need to show $b^2 - 4ac = -8 < 0$ **and** make some reference to $k^2 + 2k + 3$ being above the $x$-axis (eg. states that coefficient of $k^2$ is positive **or** evaluates $\det(\mathbf{A})$ for any value of $k$ to give a positive result **or** sketches a quadratic curve that is above the $x$-axis) before then stating that $\det(\mathbf{A}) > 0$. |
| | **Note** | Attempting to solve $\det(\mathbf{A}) = 0$ by applying the quadratic formula or finding $-1 \pm \sqrt{2}\mathrm{i}$ is enough to score the M1 mark for Way 2. To gain A1 these candidates need to make some reference to $k^2 + 2k + 3$ being above the $x$-axis (eg. states that coefficient of $k^2$ is positive **or** evaluates $\det(\mathbf{A})$ for any value of $k$ to give a positive result **or** sketches a quadratic curve that is above the $x$-axis) before then stating that $\det(\mathbf{A}) > 0$. |
| (b) | **A1** | Allow either $\dfrac{1}{(k+1)^2+2}\begin{pmatrix} k+2 & -3 \\ 1 & k \end{pmatrix}$ or $\begin{pmatrix} \dfrac{k+2}{k^2+2k+3} & \dfrac{-3}{k^2+2k+3} \\ \dfrac{1}{k^2+2k+3} & \dfrac{k}{k^2+2k+3} \end{pmatrix}$ or equivalent. |
