Edexcel Maths M3

Topic Questions from Papers

Kinematics

| 1. | A particle P moves along the x -axis. At time $t = 0$, P passes through the origin O , moin the positive x -direction. At time t seconds, the velocity of P is v m s ⁻¹ and O metres. The acceleration of P is $\frac{1}{12}(30-x)$ m s ⁻² , measured in the positive x -direction | P = x | dian |
|----|---|-------|------|
| | (a) Give a reason why the maximum speed of P occurs when $x = 30$. | | |
| | (a) Give a reason why the maximum speed of r occurs when we so. | (1) | |
| | Given that the maximum speed of P is 10 m s^{-1} , | | |
| | (b) find an expression for v^2 in terms of x. | | |
| | | (5) | |

6. A particle P of mass 0.5 kg moves along the positive x-axis. It moves away from the origin O under the action of a single force directed away from O. When OP = x metres,

the magnitude of the force is $\frac{3}{(x+1)^3}$ N and the speed of P is v m s⁻¹.

Initially *P* is at rest at *O*.

- (a) Show that $v^2 = 6\left(1 \frac{1}{(x+1)^2}\right)$. (6)
- (b) Show that the speed of P never reaches $\sqrt{6}$ m s⁻¹.

(1)

(c) Find x when P has been moving for 2 seconds.

(7)

- 6. A cyclist and her bicycle have a combined mass of $100 \,\mathrm{kg}$. She is working at a constant rate of $80 \,\mathrm{W}$ and is moving in a straight line on a horizontal road. The resistance to motion is proportional to the square of her speed. Her initial speed is $4 \,\mathrm{m \ s^{-1}}$ and her maximum possible speed under these conditions is $20 \,\mathrm{m \ s^{-1}}$. When she is at a distance $x \,\mathrm{m}$ from a fixed point O on the road, she is moving with speed $v \,\mathrm{m \ s^{-1}}$ away from O.
 - (a) Show that

$$v \frac{dv}{dx} = \frac{8000 - v^3}{10000v} \ .$$

(5)

(b) Find the distance she travels as her speed increases from $4 \, \text{m s}^{-1}$ to $8 \, \text{m s}^{-1}$.

(5)

| (c) | Use the trapezium rule, | with 2 intervals, | to estimate | how lo | ng it takes | for her | speed |
|-----|--------------------------------------|------------------------------|-------------|--------|-------------|---------|-------|
| | to increase from 4 m s ⁻¹ | to $8 \mathrm{m \ s^{-1}}$. | | | | | |

At time t = 0, a particle P is at the origin O moving with speed 2 m s^{-1} along the x-axis in the positive x-direction. At time t seconds (t > 0), the acceleration of P has magnitude

 $\frac{3}{(t+1)^2}$ m s⁻² and is directed towards O.

(a) Show that at time t seconds the velocity of P is $\left(\frac{3}{t+1}-1\right)$ m s⁻¹. **(5)**

(b) Find, to 3 significant figures, the distance of P from O when P is instantaneously at rest.

3. A particle P of mass 0.6 kg is moving along the x-axis in the positive direction. At time t = 0, P passes through the origin O with speed 15 m s⁻¹. At time t seconds the distance OP is t metres, the speed of t is t m s⁻¹ and the resultant force acting on t has magnitude t newtons. The resultant force is directed towards t or t newtons. The resultant force is directed towards t or t newtons.

(a) Show that $v = 5\left(\frac{4}{t+2} + 1\right)$. (5)

(b) Find the value of x when t = 5
