

## Particle Physics MS

1. B [1]
2. D [1]
3. B [1]
4. B [1]
5. C [1]
6. (a) (Total / sum of) Kinetic energy conserved 1
- (b) These diagrams could appear in part c and should be credited in (b) 1
- 

- 1
- [allow first mark for any triangle or parallelogram ie do not insist on right angle]  
right angle labelled or approximately by eye / diagonal should be labelled "before" or "initial" or appropriately recognisable as incoming particle
- (c) KE as formula eg  $\frac{1}{2} mu^2 = \frac{1}{2} mv^2 + \frac{1}{2} ms^2 / p^2 / 2m = p^2 / 2m + p^2 / 2m$  1  
Recognition of "Pythagoras" 1
- (d) (i) Electric field 1  
Does work on proton/applies a force /repel/attract 1  
 $qV / Fd / Eq$  1

- (ii) Mass of incoming proton larger (than rest mass) (1)  
 Due to moving near speed of light/high  
 speed/high energy/relativistic (1)

Alt answer : image not in plane of two protons after the event (2) Max 2

- (e) Out of the plane of paper 1

[11]

7. (a)  $2/3$  that of a proton /  $2/3 \times 1.6 \times 10^{-19}$  (C) 1

- (b) Mass =  $80 \text{ MeV}/c^2$  1  
 charge =  $+1/3$  1

- (c) Recognition M means  $10^6$  1  
 Convert eV to J or divide by  $c^2$  1  
 eg  $4 \times 10^6 \times 1.6 \times 10^{-19}$  or  $/9 \times 10^{16}$   
 Answer  $7.1 \times 10^{-30}$  (kg) 1

- (d) (i) Kaon Meson 1  
 Omega baryon 1

- (ii)  $K^- + p$  1  
 $= K^+ + K^0 + \Omega^-$   
 [accept p or  $p^+$  ;do not accept K for  $K^0$  ;signs must be top right] 1

- (iii) Kaon plus =  $u \bar{s}$  1  
 Kaon neutral =  $d \bar{s}$  or  $s \bar{d}$  1  
 [both marks can be inferred if equation in d(ii) is fully written in  
 quark combinations)

- (iv) QWC i and iii – Spelling of technical terms must be correct and the answer must be organised in a logical sequence

Momentum conserved (1)

Charge conserved (1)

Energy / mass conserved (1)

$E = mc^2$  (1)

Kinetic Energy (of kaon minus) is responsible (1)

Momentum of three particles after = momentum of kaon before (1)

Total charge 0 / charge before and after is 0 (1)

Conservation of Baryon no, quark no, strangeness (1)

Max 5

*allow only 1 mark max from these 3*

[17]

8. C

[1]

9. C

[1]

10. D

[1]

11. QWC

QWC i and iii – Spelling of technical terms must be correct and the answer must be organised in a logical sequence

Observations:

Most alpha went straight through (1)

Some deflected (1)

(Very) few came straight back/large angle (1)

Conclusions:

Atom mainly (empty) space (1)

Nucleus contains most of the mass (1)

(Nucleus) very small/tiny (1)

(Nucleus) charged /positive (1)

[5]

12. (a)  $u\bar{d}$  identified (1)

1

- (b) Conversion of G (1)  
 Conversion of either eV or divided by  $c^2$  (1)  
 $2.5 \times 10^{-28}$  (kg) (1)  
 eg  
 $m = 0.14 \times 10^9 \times 1.6 \times 10^{-19} / 9 \times 10^{16}$  3

- (c) **QWC**  
 QWC i and iii – Spelling of technical terms must be correct and the answer must be organised in a logical sequence  
 Electric fields:  
 Electric field provides force on the charge/proton (1)  
 gives energy to /work done /  $E = qV$ / accelerate protons (1)  
 Magnetic fields:  
 Force on moving charge/proton (1)  
 Produces circular path/centripetal force (1) 4

labelled diagram showing Dees  
 with E field indicated across gap OR B field through Dees (1)  
 E field is reversed/alternates (1) Max 1

- (d) **QWC**  
 QWC i and iii – Spelling of technical terms must be correct and the answer must be organised in a logical sequence  
 momentum (1)  
 Zero / negligible momentum before (1)  
 To conserve momentum (fragments go in all directions) (1) 3

[12]

13. (a) (i) measured thickness of lead 4-5 mm (1)  
 measured radius 32 - 38 mm (1)  
 Value between 38 – 57 mm (1)  
 Eg actual radius =  $35 \text{ mm} \times 6 \text{ mm} / 4.5 \text{ mm}$  3
- (ii) Use of  $p = Bqr$  [ any two values sub] (1)  
 Answer range  $9.1 \times 10^{-21}$  -  $1.4 \times 10^{-20}$  N s or  $\text{kg m s}^{-1}$   
 [allow ecf](1) 2

- (b) Track gets more curved above lead / r smaller above lead **(1)**  
 Must be slowing down / less momentum / loses energy **(1)**  
 Up [dependent on either answer above] **(1)** 3
- (c) Into page **(1)**  
 [ecf out of page if down in b] 1
- (d) (i) Division by  $9.11 \times 10^{-31}$  kg **(1)**  
 Answer range  $1.0 - 1.6 \times 10^{10}$  m s<sup>-1</sup> **(1)** 2
- (ii) greater than speed of light **(1)**  
 (impossible) so mass must have increased **(1)** 2
- [13]**
- 14. C** [1]
- 15. C** [1]
- 16. (a)** A baryon is a (sub-atomic) particle made up of 3 quarks**(1)** 1
- (b) n (ddu) → **(1)**  
 p (duu) **(1)** 2
- [3]**
- 17. (a)** High frequency or high voltage**(1)**  
 Alternating **or** square wave voltage**(1)** 2
- (b) No electric field inside cylinders (due to shielding) **(1)**  
 so no force (on electrons) **(1)** 2

- (c) As speed increases (along the accelerator), (1)  
cylinders are made longer so that time in each stays the same(1) 2

[6]

18. The answer must be clear, use an appropriate style and be organised in a logical sequence (QWC)  
 $\alpha$ -particles fired at (named) metal (film) (1)  
in a vacuum (1)  
Most went straight through **or** suffered small deflections. (1)  
A few were reflected through large angles **or** some were reflected along their original path (1)  
suggesting the mass **or** charge of the atom was concentrated in a very small volume (1) 5

[5]

[6]

19. (a)  ${}_3\text{Li}^7 + {}_1\text{p}^1 = {}_2\text{He}^4 + {}_2\text{He}^4$   
completing LHS (1)  
completing RHS(1) 2

- (b) (i) Charge (1)  
(mass/) energy (1) 2

- (ii) Mass of Li + p = 7.0143 u + 1.0073 u = 8.0216 u (1)  
Mass of 2  $\alpha$ -particles = 2  $\times$  4.0015 u = 8.0030 u (1)  
 $\Delta m = 8.0216 \text{ u} - 8.0030 \text{ u} = 0.0186 \text{ u}$   
 $= 0.0186 \times 1.66 \times 10^{-27} \text{ kg} = 3.09 \times 10^{-29} \text{ kg}$  (1)  
 $\Delta E = c^2 \Delta m = (3.00 \times 10^8 \text{ m s}^{-1})^2 \times 3.09 \times 10^{-29} \text{ kg} = 2.78 \times 10^{-12} \text{ J}$  (1)  
[Allow ecf from equation] 4

$$(iii) = \frac{2.78 \times 10^{-12} \text{ J}}{1.60 \times 10^{-19} \text{ J eV}^{-1}} = 1.74 \times 10^7 \text{ eV} = 17.4 \text{ MeV (1)}$$

The incoming proton has an energy of 300 keV = 0.30 MeV (1)

So total energy = 17.4 MeV + 0.3 MeV = 17.7 MeV (1)

The calculated energy differs by

$$\frac{17.7 \text{ MeV} - 17.2 \text{ MeV}}{\frac{1}{2}(17.7 + 17.2) \text{ MeV}} \times 100\% \approx 3\% \text{ (1)}$$

The experiment therefore provides strong evidence for Einstein's prediction (1)

5

[13]

20. (a) Paths of alpha particles

Path A drawn less deflected than B (1)

Path A drawn as a straight line (1)

2

(b) (i) Why alpha source inside container

Alpha would be absorbed by [accept would not get through] container (material) (1)

1

(ii) Why the same kinetic energy?

**Either**

To restrict observation to two variables / closeness of approach and deflection

or so that speed / velocity / (kinetic) energy does not have an effect (on the observation / deflection / results / contact time)

1

(iii) Why an evacuated container?

**Either**

so that alphas do not get absorbed by / collide with / get deflected by / stopped by / scattered by / get in the way of / ionise / lose energy to atoms / molecules (of air) [Do not accept 'particles' of the air]

or so that all alphas reach the foil with the same (kinetic) energy

1

[5]

21. **Particle classification**

Neutron: baryon and hadron (1)

Neutrino: lepton (1)

Muon: lepton (1)

3

[3]

22. (i) **Conservation laws**

First reaction, Q:  $0 + 0 \neq 1 + 1$  (1)

Second reaction B:  $1 = 1 + 0$  AND Q:  $-1 = -1 + 0$  (1)

Hence only  $\Omega^-$  decay possible [based on B and Q conservation for this decay, accept simple ticks and crosses] (1)

3

(ii) **Quark charges**

Use of  $sss = -1$  to show  $s = -\frac{1}{3}$  (1)

Hence correct working (from baryons) to show  $u = \frac{2}{3}$  and  $d = -\frac{1}{3}$  (1)

2

[5]

23. (a) (i)  $1.2 \text{ keV} = 1.2 \times 10^3 \times 1.6 \times 10^{-19} \text{ J}$

**OR**

Use of  $e\Delta V$  with  $e$  as  $1.6 \times 10^{-19} \text{ C}$  and  $V$  as  $1200 \text{ V}$  (1)

Use of  $\Delta(\frac{1}{2}m_e v^2)$  with  $m_e$  as  $9.1(1) \times 10^{-31} \text{ kg}$ . (1)

Correct answer  $2.0 - 2.1 \times 10^7 \text{ m s}^{-1}$  (1)

3

(ii)  $1200 \times 8/100 = 96$  (eV delivered per electron) (1)

$96/2.4 = 40$  (1)

**Or**

$2.4 \times 100/8 = 30$  (incident eV needed per photon) (1)

$1200/30 = 40$  (1)

**Or**

$1200 / 2.4 = 500$  (photons per electron, ideally) (1)

$500 \times (8/100) = 40$  (1)

2

(b) Electrons on screen repel electrons in beam / force opposes electron motion/decelerating force (1)

Electrons (in beam) decelerated /slowed / velocity reduced/ work done by electrons (against force) (1)

Electron (kinetic) energy reduced (not 'shared') (1)

Fewer photons (per electron, stated or implied) (1)

Trace less bright (1)

QoWC (1)

Max 4

[9]

24. (a) pair of values of k.e. and  $v^2$  read from graph / gradient (1)

$$v^2 > 5 \times 10^{16} \text{ m s}^{-2} \text{ (1)}$$

$$\Rightarrow m_p = 1.62 - 1.69 \times 10^{-27} \text{ (kg) to 3 s.f. (1)}$$

3

(b) (i) (values 1.3 – 1.7, 3.1 – 3.5, 6.0 – 6.5) any **two** correct (1)(1)

$$(ii) \Delta E = c^2 \Delta m / E = mc^2 \text{ (1)}$$

$\Rightarrow$  one value for  $\Delta m$  ( $\times 10^{-28}$  kg) (1)

use of  $m_p$  from (i) [no mark]

$\Rightarrow$  one value of  $\Delta m/m_p$  : about 10%, 20%, 40% (1)

5

[8]

25. (a) Show sum of quark charges in proton = +1

$$+2/3 + 2/3 - 1/3 = (+) 1 \text{ (1)}$$

Show sum of quark charges in neutron = 0

$$+2/3 - 1/3 - 1/3 = 0 \text{ (1)}$$

[ignore references to e]

2

(b) (i) • baryon (1)

• meson (1)

2

(ii) baryon: 3 quarks (1)

meson: quark/antiquark (1)

[1 for answers reversed or baryon/meson not specified]

2

- (c) any 4 marks from the following examples:  
 high speed means high energy/momentum (1)  
 may need to overcome (electrostatic) repulsion (1)  
 more energy available for creating particles (1)  
 higher energy/momentum/speed means shorter wavelength (1)  
 reference to  $\lambda = h/mv$  or  $\lambda = h/p$  (1)  
 for diffraction/scattering (1)  
 need  $\lambda$  approx equal to particle spacing/internal structure (1) max 4

- (d) Speeds near the speed of light (1)

[11]

26. Recall speed =  $s/t$  (1)  
 Use of  $s = \pi D$  (1)  
 Answer for speed (1)  
 Conclusion (1)

OR

- Use of  $v = r\omega$   
 Use of  $\omega = 2\pi \times 20\,000$   
 Answer for speed  
 Conclusion

$$v = s/t$$

$$s = \pi \times 8000 \text{ (m)}$$

$$v = \pi \times 8000 \times 20\,000 \text{ (m/s)}$$

$$v = 5 \times 10^8 \text{ m/s}$$

inaccurate/not possible since speed  $> c$

[4]

27. (a)  $\begin{matrix} 18 & & 1 & & 18 & & 1 \\ \text{O} & + & \text{p/H} & \text{equals} & \text{F} & + & \text{n} \\ 8 & & 1 & & 9 & & 0 \end{matrix}$  (1)  
 (1)  
 [omitting the n with everything else correct = 1] 3

- (b) Accelerated through  $19 \times 10^6 \text{ V / MV}$   
 Using linear accelerator / cyclotron / particle accelerator / (1)  
 recognisable description (1) 2

- (c) Time taken for half the original quantity/ nuclei /activity to decay (1)  
 Long enough for (cancer/tumour/body to absorb) and still be  
 active/detected (1)  
 Will not be in body for too long (1) 3

- (d) Use of  $E = mc^2$  (1)  
 Use of  $E = hf$  (1)  
 Use of  $v = f\lambda$  (1)  
 $\lambda = 2.4 \times 10^{-12}$  m (1)

eg  $9.11 \times 10^{-31} \times 9 \times 10^{16}$  ( $\times 2$ )  
 $f = 8.2 \times 10^{-14} / 6.6 \times 10^{-34}$  ecf  
 $\lambda = 3 \times 10^8 / 1.2 \times 10^{20}$  ecf

4

- (e) Conservation of momentum (1)

Before momentum = 0 (1)

so + for one photon and – for other (1)

2 max

[14]

28. (a) Calculate the ratio the densities of the atom and the nucleus

Density equation [In symbols or numbers] (1)

Show the relationship between density and radius. (1)

[Candidates who start by stating that density is inversely proportional to the radius cubed would get both these marks.

Candidates who show an expression where the mass is

divided by  $\frac{4}{3}\pi r^3$  would set both these marks. Candidates who

write Ratio =  $(1/10^5)^3$  would get both of these marks.]

Factor  $10^{-15}$  established. [Some working must be shown for this mark] (1)

$$\text{Eg } (\text{Density})_{\text{atom}} = \frac{m}{\frac{4}{3}\pi r_{\text{atom}}^3} \text{ or Density } \propto \frac{1}{r^3}$$

$$(\text{Density})_{\text{nucleus}} = \frac{m}{\frac{4}{3}\pi r_{\text{nucleus}}^3}$$

$$\frac{(\text{Density})_{\text{atom}}}{(\text{Density})_{\text{nucleus}}} = \left(\frac{r_{\text{nucleus}}}{r_{\text{atom}}}\right)^3$$

$$= (10^{-5})^3$$

Assumption – (entire) mass of the atom is concentrated in the nucleus [there must be a reference to the nucleus] (1)

[eg mass of the atom =/approx – mass of the nucleus; most / majority of the atom's mass is in the nucleus. The following would not be awarded marks; The atom is mostly empty space; mass of the electrons is negligible; the nucleus is a very dense.]

4

(b) Observation

A very small percentage of particles [accept 'very few' not just 'a few'. Do not accept 'some'] are deflected through angles greater than  $90^\circ$  / are back-scattered / deflected back. (1)

[Allow; nearly all / most (alpha) particles pass through (the atom) without being deflected (showing the atom is virtually empty space).]

[Accept 'nearly all', not 'many' for the word 'most'.]

1

[5]

29. (a) energy (of proton) converts to mass (1)

7 TeV > 251 GeV, (so enough energy present to create Higgs particle) (1)

2

(b) (i) calculate rest-mass energy of proton in J (1)  
comparison with 7 TeV (1)

$$\text{rest mass energy of proton} - E = mc^2 = 1.67 \times 10^{-27} \times c \times c \\ = 1.5 \times 10^{-10} \text{ J}$$

$$= 1.5 \times 10^{-10} / 1.6 \times 10^{-19} \text{ (eV)} = 9.4 \times 10^8 \text{ (eV)}$$

much less than 7 TeV.

$$\text{OR } 7 \text{ TeV} = 7 \times 10^{12} \times 1.6 \times 10^{-19} \text{ (J)}$$

$$= 1.12 \times 10^{-6} \text{ (J)}$$

$$\gg 1.5 \times 10^{-10} \text{ J}$$

2

(ii) Appropriate use of  $1.6 \times 10^{-19}$  OR energy from above in J (1)  
Answer (1)

$$\text{momentum} = \text{energy}/c = 7 \times 10^{12} \times 1.6 \times 10^{-19} \text{ (J)} / (3 \times 10^8 \text{ (m/s)}) = \\ 3.73 \times 10^{-15} \text{ (kg m s}^{-1}\text{)}$$

2

(iii) Attempt to use  $r = p/Bq$  (1)  
two correct subs into formula OR rearrangement (1)  
circumference => radius (1)  
answer (1)

$$r = p/Bq$$

$$B = p/rQ$$

$$= 3.73 \times 10^{-15} / [(27000/2) \times 1.6 \times 10^{-19}] \text{ (T)}$$

$$= 5.4 \text{ T}$$

4

(iv) Yes (stated or clearly implied) (1)  
because motion and force both horizontal OR motion/force/B must all be perpendicular (1)

2

[12]

30. (i) Add to diagram.  
 Arrows at A and B, both pointing directly away from the nucleus. (1)  
 [Arrow end (head or tail) need not touch A /B, but direction must be correct.  
 Gauge by eye, accept dotted construction lines as indication of intent] 1

(ii) Calculation of force

$$\text{Use of } F = \frac{Q_1 Q_2}{4\pi\epsilon_0 r^2} \text{ or } F = \frac{kQ_1 Q_2}{r^2} \text{ (1)}$$

[ignore error/omission of '2' and/or '79' or 'e' or '1.6 × 10<sup>-19</sup>', for this first mark, providing numerator clearly has a product of charges and denominator a distance value squared. Ignore power of 10 errors in values of Q or r]

2 × 1.6 × 10<sup>-19</sup> C and 79 × 1.6 × 10<sup>-19</sup> C seen (**consequential** mark, dependent upon correct use of equation previously) (1)

Correct answer = 1.6 – 1.7 N (1)

Example of answer:

$$F = \frac{Q_1 Q_2}{4\pi\epsilon_0 r^2} = \frac{(79 \times 16 \times 10^{-19} \text{ C}) \times (2 \times 1.6 \times 10^{-19} \text{ C})}{4\pi \times 8.85 \times 10^{-12} \text{ F m}^{-1} \times (1.5 \times 10^{-13} \text{ m})^2}$$

= 1.62 N 3

(iii) Effect on motion of α

Slows down [decelerates] and then speeds up again [accelerates].  
 (both needed)

[accept 'slows down at A and speeds up at B] (1) 1

[5]

31. (a) (i) Not matter/antimatter pair [stated or implied] (1)  
 particle/antiparticle have same mass OR electron/proton not same mass OR other correct reason (eg electron is fundamental, proton is quarks) (1)  
 antiparticle to proton is antiproton OR antiparticle to electron is positron/antielectron (1) 3

(ii) Not matter/antimatter pair [stated or implied] (1)  
 anti to up is anti-up OR anti to down is anti-down (1)  
 up and down have different charge (1) any 5

(b) particles/antiparticles carry opposite charge (1)  
 (component of) field perpendicular to travel (1)  
 (magnetic/LH rule) forces act in opposite directions (1)  
 some pairs uncharged so no separation/deflection (1)  
 [not annihilation] any 2

(c) number =  $5000 \times 10^{-12} \text{ kg} / 9.11 \times 10^{-31} \text{ kg} = 5.5 (5.488) \times 10^{21}$  (1) 1

- (d) (i) correct use of  $E = mc^2$  [subs] (1)  
 correct use of  $E = hf$  and  $c = f\lambda$  [rearranged or subbed] (1)  
 correct answer [ue] (1)

$$E = mc^2 = 9.11 \times 10^{-31} \times (3 \times 10^8)^2 \text{ J} (= 8.199 \times 10^{-14} \text{ J}) (1)$$

$$E = hf = hc/\lambda \Rightarrow \lambda = hc/E (1)$$

$$= 6.63 \times 10^{-34} \times 3 \times 10^8 / 8.199 \times 10^{-14} \text{ m}$$

$$= 2.4 (2.426 \text{ or } 2.42 \text{ or } 2.43) \times 10^{-12} \text{ m} \text{ [ignore omission of both factors of 2]} (1)$$

[factor of 2 wrong is a.e. = -1]

[use of  $\lambda = h/p$  scores 0]

3

- (ii) this wavelength is not visible light  
 OR this is x-ray or gamma or high energy photon so need shielding (1) 1

[12]

**32. B in accelerators:**

changes direction of motion of charged particles OR

force/B perpendicular to motion of charged particles

OR ref to LHR

(1)1

(moving) charged particles stored in circles/circular  
 path/spirals

(1)2

$$Bqv = mv^2/r$$

(1)3

$$\text{cyclotron: } T = 2\pi m/Bq$$

(1)4

fixed frequency voltage for acceleration

(1)5

diag/construction detail [probably on diag]

(1)6

synchrotron:  $r$  fixed,  $B$  adjusted as needed

(1)7

(up to 4)

$B$  in detectors:

charged particles  $\Rightarrow$  (detectable) curved paths

(1)8

find sign of charge from sense of curvature

(1)9

find momentum/speed/energy/mass from  $r (= p/Bq)$

(1)10

[5]

**33. Deductions**

- (a) (i) The atom is mainly empty space (1)  
 [The atom must be referred to. The words 'empty' and 'space' must be qualified eg 'there is a large amount of space in the atom' is not sufficient]
- (ii) Within the atom there is an area / the nucleus which is positive / charged or more massive than the alpha particle  
 [If they choose to describe only the mass it must be a comparison ie 'the nucleus is (much) more massive than the alpha'. 'The atom has a dense centre,' 'the nucleus has a large mass' are both insufficient.]  (1) 2

- (b) Explain  
 (Deflection could have been) repulsion from positive nucleus (1)  
 (Deflection could have been) attraction towards negative nucleus (1)  
 [The words repulsion and attraction can be described eg ' $\alpha$  deflected away from positive nucleus', ' $\alpha$  is deflected towards a negative nucleus'] [Diagrams showing the path of an alpha deflected by both a negatively and a positively charged nucleus would get both marks]  2

- (c) Value of  $n$   
 (4 – 6) (1)  
 [Allow minus values] 1

[5]

- 34.** (a) Any 2 from:  
 momentum conserved (1)  
 initial momentum zero (1) (Any 2)  
 $\Rightarrow$  final momentum zero (1)  
 [opposite charges repel  $\Rightarrow$  xx] 2

- (b) 0.140 GeV/c<sup>2</sup> (1)  
 – 1.6 × 10<sup>-19</sup> C (1)  
 anti-u, d (1) 3

- (c) Meson (1) 1

- (d) [(1) for 0.14 (alone) **or** correct use of 10<sup>9</sup>] (1)  
 Minimum energy = 1.4 × 10<sup>8</sup> (eV) **or** 0.14 × 10<sup>9</sup> (eV) (1)   
 [0.14 G is (1)x] 2

- (e) Particles have K.E. (as well as mass) (1)  1

- (f) Use of  $\Delta E = c^2 \Delta m$  [rearrangement OR one correct line subbed] (1)   
 correct value (1)

eg  $\Delta m = \Delta E / c^2 = 0.14 \times 10^9 \times 1.6 \times 10^{-19} \text{ J} / (3 \times 10^8 \text{ m s}^{-1})^2$

Mass loss =  $2.5 \times 10^{-28} \text{ kg}$

[ecf from (d)]

2

[11]

35.  $\beta$  – decay equations

- (i) n = udd and p = uud (1)

$\beta^-$  and  $\bar{\nu}$  have no quarks / are leptons / are fundamental (1)

2

- (ii)  $p \rightarrow n$  (1)

$\beta^+$  and  $\nu$  [on RHS, allow  $e^+$ ] (1)

2

[4]

36. Antihydrogen

- (i) Antiproton [or anti–up quark, anti–down quark] and positron (1)

1

- (ii)  $\bar{p} = -1$  and  $e^+ = +1$  [accept correct  $\bar{u}$ ,  $\bar{d}$  charges for  $\bar{p}$ ] (1)

$\bar{u} \bar{u} \bar{d}$  ( $e^+$  fundamental / no quarks) [ecf from (b), credit if in (i)] (1)

2

- (iii) zero / neutral (1)

1

Antimatter storage

- (iv) Annihilates (1)

(On contact) with matter / container / protons / H

OR Not charged: not affected by magnetic fields (1)

2

[6]

37. (a) Quality of written communication (1)

Protons drift/move uniformly inside tubes (1)

Accelerate **between** the tubes/in the **gaps** (1)

Alternating p.d. reverses while p is **in** tube (1)

The tubes must get longer as p speeds up (1)

For time inside tube to be constant or to synchronise

movement with the pd (1)

Max 5

- (b) (i) Multiply by 419 or 420 (1)  
 Multiply by  $1.6 \times 10^{-19}$  (1)  
 Correct answer to at least 2 sf (1)  
 $[5.36/5.38/5.4 \times 10^{-11} \text{ (J)}]$  [no ue]  
 $\Delta m = \text{energy} \div (9.0 \times 10^{16} \text{ m}^2 \text{ s}^{-2})$  (1)  
 $[\text{ecf their energy or } 5 \times 10^{-11}]$  (1)  
 $\Delta m \div 1.01 \times 1.66 \times 10^{-27} \text{ kg}$  [ecf their  $\Delta m$ ] (1)  
 Correct answer (1)  
 $[0.36 \text{ or } 36\%]$  [Use of  $5 \times 10^{-11}$  gives 33%] (1) 6  
 [Accept routes via  $\Delta m$  in u and  $m_p$  in J]
- (ii) Use of  $1/f$  (1)  
 $\therefore \text{time down linac} = 420 \div 3.9 \times 10^8 \text{ s}^{-1}$   
 or  $210 \div 3.9 \times 10^8 \text{ s}^{-1}$  (1)  
 $[t = 1.07/1.08/1.1 \times 10^{-6} \text{ (s) or } 0.54 \times 10^{-6} \text{ (s)}]$  2
- (c) (i) Fixed target:  
 Large(r) number of /more collisions **or** more likely to get collisions  
**[not easier to get collisions]** (1)  
 Other particle beams produced (1)
- (ii) Colliding beams:  
 More energy available for **new particles** (1)  
 $p = 0$  so all energy available (1) Max 2

[15]

38. “The standard model”

Everyday matter/atoms: p,n, e [maybe in two places] (1)

Protons / neutrons are made from quarks (1)

p: uud and n:udd (1)

show charge of either [p:  $u(+2/3) u(+2/3) d(-1/3) \Rightarrow +1$  OR n:  $u$

$(+2/3) d(-1/3) d(-1/3) \Rightarrow 0]$  (1)

All baryons have three quarks (1)

Hadrons contain quarks (1)

Electron is fundamental/leptons are fundamental (1)

Electron-neutrino created during  $\beta$ -decay (1)

Max 6

[6]

**39. Calculation of voltage**

Use of  $\Delta E = c^2 \Delta m$  (1)

Use of eV (1)

Correct answer [ $4.1 \times 10^9$  (V)] [no ue] (1)

Example of calculation:

$$\Delta E = c^2 \Delta m = eV$$

$$\Rightarrow V = c^2 \Delta m / e = 9 \times 10^{16} \times 8000 \times 9.1 \times 10^{-31} / 1.6 \times 10^{-19} \text{ V}$$

$$= 4.1 \times 10^9 \text{ V}$$

3

Role of magnets

Field deflects/bends/curves the path (1)

Field is at curved parts / field at AD and BC / no field on straight parts (1)

Field perpendicular to page / velocity (1)

Force perpendicular to velocity or field (1)

Force is centripetal / towards centre (1)

Max 4

Calculation of field strength:

$$r = p / Bq \text{ rearranged to } B = p/rq \text{ (1)}$$

correct substitution of either  $p$  OR of  $r$  and  $q$  (1)

Correct answer [0.124(T), no ue] (1)

Example of calculation:

$$r = P / Bq \Rightarrow B = P / qr$$

$$= 8000 \times 9.1 \times 10^{-31} \times 3.0 \times 10^8 / 110 \times 1.6 \times 10^{-19} \text{ T}$$

$$= 0.124 \text{ T}$$

7

[10]

40. Conservation laws

Baryon (1)

- 1 (1)

Q:  $(-1) + (+1) = (0) + (+1) + (X)$  (1)

B:  $(0) + (+1) = (0) + (0) + (X)$  (1)

4

Quark content

uud (1)

$u\bar{s}$  (1)

2

[6]

41. Conserved quantities

Momentum, charge, (mass-)energy, lepton number (1) (1)

2

[2 right gets 1 mark; all 3 right get 2 marks]

[Do not credit kinetic energy]

Charge of the pentaquark

$$2 \times \frac{+2}{3} + 2 \times \frac{-1}{3} + \frac{1}{3}$$

= (+) 1(e) (1)

1

Charge on X

Positive since pentaquark was positive, neutron neutral [ecf] (1)

1

[Reasoning needed]

Possible quark composition for X with explanation

$u\bar{s}$  (1)

Left behind (after removing neutron/udd) (1)

2

Mass of pentaquark

Conversion from GeV to J or substitution of  $c^2$  (1)

answer [no ue] (1)

$$1.54 \times 10^9 \times 1.6 \times 10^{-19} / (3 \times 10^8)^2$$

2

$$= 2.7 \times 10^{-27} \text{ kg}$$

[8]

42. Approximate energy of alpha particle in MeV

1.  $r = 0.09$  (m) [accept in range 0.07 – 0.12] (1)  
[must have unit if given in cm]
2.  $q = 2 \times 1.6 \times 10^{-19}$  (C) (1)
3.  $m = 4 \times 1.7 \times 10^{-27}$  (kg) (1)
4.  $r = p/Bq \Rightarrow p = rBq$  or  $v = rBq/m$  (1)  
[see equation or substitution]  
 $[p = 0.09 \times 3.7 \times 3.2 \times 10^{-19}$  N s]
5.  $= 1.07 \times 10^{-19}$  (Ns) **OR**  $v = 1.6 \times 10^7$  (m s<sup>-1</sup>) (1)
6.  $E = p^2/2m$  or use of  $\frac{1}{2}mv^2$  (1)  
 $[E = (1.07 \times 10^{-19})^2 / (2 \times 4 \times 1.67 \times 10^{-27})]$  J]
7.  $8.6 \times 10^{-13}$  J (1)

(5.4 MeV/5.4 × 10<sup>6</sup> eV)

7

[7]

43. Base units of eV

- (i) Reference to joule (1)

Useful energy equation / units shown [e.g.  $\frac{1}{2}mv^2$ ,  $mgh$ ,  $mc^2$ ,  $Fd$ , *not* (1)  
 $QV$  or  $Pt$ ]

Algebra to  $J = \text{kg m}^2 \text{ s}^{-2}$  shown (e.g.  $\text{kg (m s}^{-1})^2$  or  $\text{kg m s}^{-2} \text{ m}$ ) (1)

3

- (ii) Energy released

146 shown or used (1)

$\Delta m$  calculation [1.9415, ecf] (1)

Multiply by 930 [allow  $E = mc^2$  with mass in kg] (1)

1800 MeV [no ue] (1)

4

[7]

44. (i) Decay numbers

${}^1_1\text{p}$  and  ${}^1_0\text{n}$  (1)

${}^0_1\beta^+$  and  ${}^0_0\nu$  (1)

2

(ii) Tick the boxes

Proton: baryon and hadron only (1)

neutron: baryon and hadron only (1)

$\beta^+$ : lepton and antimatter only (1)

$\nu$ : lepton only (1)

4

[only penalise once for including meson] [if both baryon correct but no hadrons 1 mark out of 2 and vice versa]

[6]

45. Explanation

energy gained by electron accelerated through 1 V/ $W = QV$  (1)

$$W = 1.6 \times 10^{-19} \text{ C} \times 1 \text{ V} = 1.6 \times 10^{-19} \text{ J} \text{ (1)}$$

2

Unit of mass

$$\Delta E = c^2 \Delta m \text{ so } \Delta m = \Delta E / c^2 \text{ (1)}$$

GeV is energy  $\Rightarrow$  GeV/ $c^2$  is mass (1)

2

Mass of Higgs boson

$$m = 115 \times [10^9] \times 1.6 \times 10^{-19} / (3 \times 10^8)^2 \text{ (1)}$$

$$= 2.04 \times 10^{-25} \text{ kg} \text{ (1)}$$

2

Antiparticle

Same mass and opposite charge (1)

[Accept Particle and its antiparticle annihilate ( $\rightarrow$  photons)]

1

Explanation of need for a magnetic field and why it can be small

Force deflects particles/force produces circular motion (1)

Force is perpendicular to motion/force provides centripetal force (1)

$r$  is large or curvature is small/gentle (1)

reference to  $B = p/rQ$  to show why small  $B$  is needed (1)

4

Shaded boxes show answers: *circled* terms count as one.

Proton is **uud** 1

antiproton or  $\bar{p}$  is **uud** [allow  $\bar{p}$  or p-bar] 1

$\pi^+$  1

Anti  $K^0$  is  $\bar{K}^0$  [allow  $\bar{K}^0$ -bar] 1

Quark composition is **ud and sd** 1

[5]

57. Outline of evidence from Geiger's and Marsden's scattering experiment  
 Most alpha particles went (almost) straight through (1)  
 Some or a few deflected at larger angles/ $>90^\circ$ /rebounded (1)  
 A tiny minority [e.g. 1 in 8000] were deflected at angles  $> 90^\circ$  OR rebounded (1) 3

Suggestion

No large deflections/all go (almost) straight through (1)

Explanation

No concentrated charge/mass OR no massive object (to hit) no dense object to hit [consequent] (1) 2

[5]

58. Fundamental particle  
 A particle which cannot be further divided/which has no "parts" inside it/one of the 12 particles of which all matter is made (1)  
 [Not "one which cannot decay to another particle"]

Circled fundamental particles in list (2)

Positron and muon

[If more than two circled, -1 for each extra one] 3

Explanation

Any three from:

Quality of written communication (1)

Mesons are composed of a q and an  $\bar{q}$  (1)

These have charges  $\pm 2/3$  and  $\pm 1/3$  (1)

Shows all possibilities (+1, 0, -1) OR other convincing arithmetic to show max +1 (1) Max 3

[6]

59. Cathode Ray Tube

Electron emission

- Heating effect (due to current) (1)
- (Surface) electrons (break free) because of energy gain (1) 2

[Thermionic emission scores both marks]

Electron motion towards anode

The electrons are attracted to/accelerated by the positive anode (1) 1

Energy

$$\text{Electron energy} = (10 \times 10^3 \text{ V}) (1.6 \times 10^{-19} \text{ C})$$

$$= 1.6 \times 10^{-15} \text{ J}$$

Correct use of  $1.6 \times 10^{-19}$  OR use of  $10 \times 10^3$  (1)  
Answer (1) 2

Number of electrons per second

$$\text{Number each second} = \frac{1.5 \times 10^{-3} \text{ A}}{1.6 \times 10^{-19} \text{ J}}$$

$$9.4 \times 10^{15} \text{ s}^{-1}$$

Correct conversion mA  $\rightarrow$  A  
Answer (1) 2

Rate

Energy each second =  $(9.4 \times 10^{15} \text{ s}^{-1}) (1.6 \times 10^{-15} \text{ J})$  (1)  
 $= 15 \text{ Js}^{-1} \text{ (W)} / 14.4 \text{ Js}^{-1}$  (1) 2  
[ecf their energy]

[9]

60. (i) Tracks (of alphas) are the same length/alphas travel same or equal distance (1)

(ii)  $\text{H/p} + \text{Li} \rightarrow 2\alpha/2\text{He}$  (1)

${}^1_1\text{p}$  and  ${}^4_2\text{He}$  correctly labelled (1)

${}^7_3\text{Li}$  (1) 4

(iii) Mass defect = 0.01865u (1)

Either

Use of  $\times 1.66 \times 10^{-27}$

Use of  $\times 9.0 \times 10^{16}$

$\Rightarrow 2.79 \times 10^{-12}$  J

Assume: proton has zero/very little k.e. (1)

Or

Use of  $\times 930$  (1)

Use of  $\times 1.6 \times 10^{-13}$  (1)

$\Rightarrow 2.78 \times 10^{-12}$  J (1)

Max 4

[8]

61. How diagram confirms pion is negatively charged

Any two from:

- bends opposite way to proton
- reference to magnetic interaction/Fleming's left-hand rule
- proton +  $\Rightarrow$  pion - (1) (1)

2

Charge carried by lambda particle

Neutral (1)

because charge conserved OR  $+1 - 1 \Rightarrow 0$  OR  $\lambda$  not ionising/no track (1)

2

Deduction

$r_{\text{pion}} < r_{\text{proton}}$  / straighter / less curved (1)

$\Rightarrow$  since  $r = p / BQ$  ( $P_{\text{pion}} < P_{\text{proton}}$ ) (1)

2

Scale drawing

2 straight lines  $l_{\text{pr}} > l_{\text{pi}}$  (1)

Orientation of lines ( $49^\circ$ ) joined correct way (1)

Answer  $10 \pm 1$  kg m s<sup>-1</sup> (1)

3

Classification of particles

	baryon	meson
pion		✓ (1)
lambda	✓ (1)

[12]

**62. Topic C – Nuclear and Particle Physics**

Similarly

Same mass

Difference

Charge OR baryon number OR uud quarks  $\rightarrow \overline{u}\overline{u}\overline{d}$  (1) 2

Any two lepton pairs from the following:

$e^- e^+$  (   
 $\mu^- \mu^+$  ( NOT e.g. muon and antimuon/ $\mu \bar{\mu}$    
 $\tau^- \tau^+$  )   
 $\nu_e \bar{\nu}_e$  }   
 $\nu_\mu \bar{\nu}_\mu$  } OR just  $\nu \bar{\nu}$  (2) 2   
 $\nu_\tau \bar{\nu}_\tau$  }

Collision

Particle and antiparticle annihilate/produce a burst of energy/of photons /of gamma rays (1) 1

[5]

**63. Speed of electron**

Selection of  $\lambda = h/p$  and  $p = m v$  (1)

$m = 9.11 \times 10^{-31}$  (1)

$7.2 - 7.3 \times 10^6 \text{ m s}^{-1}$  (1)

Kinetic energy

Use of  $E_k = 1/2 m v^2$  (1)

147 – 152 [ecf] (1) 5

High energy electron

Nucleus tiny/a lot smaller so  $\lambda$  very small (1)

$v$  or  $p$  very large [consequent] (1) 2

[7]

**64. Quarks: What is meant by “charge = + 2/3”**

sign: +/positive/sign same as proton/sign opposite to electron (1)

size: 2/3 charge on a proton / electron (1) 2

Mass of strange quark in kilograms

$m = 0.2 \text{ GeV}/c^2$

$= 0.2 \times 10^9 \times 1.6 \times 10^{-19} \text{ (1)}$

$/ 9 \times 10^{16}$

$= 3.6 \times 10^{-28} \text{ kg (1)}$

2

Charge and mass of anti-particle to the charmed quark

Charge:  $-\frac{2}{3} \text{ (1)}$

Mass:  $1.3 \text{ GeV}/c^2$  [No unit penalty for omitting  $\text{GeV}/c^2$ ] (1)

2

Prediction of top quark

Symmetry of the model / 3<sup>rd</sup> generation partner / other valid statement

1

Reason for length of time to find experimental evidence for top quark

High energy needed (to create it) / needs a big accelerator/other valid reason

1

Use of conservation law to explain prediction

Momentum (in context)

Total momentum = 0 OR  $m_t v_t = m_b v_b$  OR in words

$m_t \gg m_b \rightarrow v_t \ll v_b$  / greater mass ( $\rightarrow$  lower velocity)

3

[11]

65. Atom is neutral (1)

Quark composition is  $\bar{u}\bar{u}\bar{d}$  (1)

Antiproton is  $(-2/3) + (-2/3) + (+1/3) (= -1)$  (1)

3

Explanation:

As soon as it touches the container/matter (1)

(Matter and antimatter) annihilate (1)

[Not “cancel”; not “react”]

2

Completion of table:

Quarks			Charge
up	charm	<b>TOP</b>	+2/3
down	strange	<b>BOTTOM</b>	-1/3

1

[OR TRUTH & BEAUTY]

[Both needed for 1 mark]

- (i) Neutral strange meson:  $s\bar{d}$  OR  $d\bar{s}$  (1)
- (ii) Positive charmed meson:  $c\bar{d}$  OR  $c\bar{s}$  (1)
- (iii) Neutral strange baryon:  $uss/css/uds/cds$  OR any of their antiparticles, e.g.  $\bar{u}\bar{s}\bar{s}$  (1)

3

[9]

**66.** Conservation laws:

- (i) Charge:  $(-1) + (+1) = (0) + (-1) + (+1) + (0)$  (1)  
Baryon number:  $(0) + (+1) = (+1) + (0) + (0) + (0)$  (1)  
[So possible, no mark]
- (ii) Charge:  $(+1) + (+1) = (+1) + (+1) + (+1) + (-1)$  (1)  
Baryon number:  $(+1) + (+1) = (+1) + (+1) + (+1) + (-1)$  (1)  
[So possible, no mark]

4

[4]

**67.** Isotope of lead:

1

Other particles:

(82)  
ons

electr  
1

How appropriate number of quarks can combine:

3 quarks involved (1)

$$2 \times +2/3 + 1 \times -1/3 = +1 \text{ (1)}$$

2

Explanation:

High energy is needed/high temperature/high speed (1)

Mention of  $E \rightarrow m$  OR  $E = mc^2$  (1)

2

Description:

Relates to electron (1)

e.g. charge +1/antiparticle/annihilates with (1)

2

[8]

68. Charge on strange quark =  $-1/3$  (1) 1

Conservation law:

Charge  $-(-1) + (+1) \rightarrow (0) + X$ /by charge conservation (1)

X is neutral (1) 2

Particle X is a meson (1)

Baryon number conservation  $(0) + (+1) \rightarrow (+1) + (0)$  (1) 2

OR discussion in terms of total number of  $q + \bar{q} = 5$  OR  $\Sigma q - \bar{q} = 3$

Composition of X is  $s\bar{d}$  [0/3 if not  $q\bar{q}$ ] (1)

Justify S quark:

This is not a weak interaction/only a weak interaction can change quark type/this is a strong interaction/strangeness is conserved/ quark flavour cannot change (1)

Justify  $\bar{d}$  quark:

X neutral;  $s = -1/3$ ;  $\bar{d} = +1/3$ . [e.c.f. if  $s = -1/3$  in first line.]

For the third mark accept any  $q\bar{q}$  pair that creates a meson of the charge deduced for X above. (1) 3

[The justification for both  $q$  and  $\bar{q}$  can be done also by tracking individual quarks]

[8]

69. Velocity of protons:

$$p = Bqr \quad \Rightarrow \quad v = \frac{Bqr}{m} \quad (1)$$

$$v = \frac{0.2 \times 1.60 \times 10^{-19} \times 1.5}{1.67 \times 10^{-27}} = 2.9 \times 10^7 \text{ ms}^{-1} \quad (1)$$

[must have 2.9]

$$\approx \frac{3 \times 10^8}{10} \text{ (ms}^{-1}\text{)} \quad (1) \quad 3$$

Time for last semi-circle of orbit:

$$t = \frac{d}{v} = \frac{\pi \times 1.5}{2.87 \times 10^7} \text{ (1)}$$

$$1.6(4) \times 10^{-7} \text{ s (1)}$$

2

Frequency of accelerating p.d.

$$f = \frac{1}{t} = 3.0 \text{ MHz [allow ecf] (1)}$$

1

[6]

70. Wavelength of photon:

$$2E \text{ (1)}$$

$$= 135 \times 10^6 \times 1.6 \times 10^{-19} \text{ (1)}$$

$$\Rightarrow E = 1.08 \times 10^{-11} \text{ J (1)}$$

$$E = hf = \frac{hc}{\lambda} \text{ (1)}$$

$$\Rightarrow \lambda = \frac{hc}{E}$$

$$\lambda = 1.84 \times 10^{-14} \text{ m (1)}$$

5

[5]

71. Completion of nuclear equation:

One mark for top line all correct (1)

One mark for bottom line all correct

2

Calculation of energy transfer

$$P = V \times I = 2.8 \times 10^6 \text{ V} \times 2.0 \times 10^{-3} \text{ A} = 5.6 \times 10^3 \text{ W OR } 5.6 \text{ kW}$$

One mark for value (1)

One mark for power of ten and unit (1)

2

Demonstration that energy is absorbed at rate of 17 GW per cubic metre:

$$\frac{\text{Power}}{\text{Volume}} = \frac{5.6 \times 10^3 \text{ W}}{280 \times 10^{-6} \text{ m} \times 1.2 \times 10^{-3} \text{ m}^2} = 1.66 \times 10^{10} \text{ W m}^{-3}$$
$$= 17 \text{ GW m}^{-3}$$

Substitution (1)  
Calculation (1)

2

Suggested problem:

Very hot/target overheats/vaporises/difficult to cool OR other good relevant physics (1)

1

[7]

72. Explanation of how it can be deduced that magnetic field acts out of the plane:

Current flow in opposite direction to  $e^-$  movement/same as  $e^+$  movement (1)  
(Force acts into spiral) hence Fleming's left-hand rule (gives field out of paper) (1)

2

Explanation of which  $e^-$  moves faster:

(the "atomic" electron) since path is straighter so  $r$  larger and

$$r = \frac{mv}{BQ} \text{ (1)}$$

1

Calculation of momentum:

$$p = BQr = 5.4 \times 10^{-3} \text{ T} \times 1.6 \times 10^{-19} \text{ C} \times 0.048 \text{ m} \text{ (1)}$$
$$= 4.1 \times 10^{-23} \text{ N s} \text{ (1)}$$

2

Explanation of why path of the positron is a spiral:

Positron continually losing speed/energy (by ionising)

1

Discussion of conservation of *two* properties:

Charge:

$e^+$  and  $e^-$  (1)

recoiling electron and stationary positive ion (1)

Energy:

$e^+$  and  $e^-$  creation (1)

since  $E = mc^2$  (1)

$E_K$  of recoiling electron (1)

$E_K$  of  $e^+$  and  $e^-$  pair (1)

Ionisation energy (1)

Momentum:

Incoming photon momentum goes to recoil electron (mostly) (1)

After collision:

Momentum up = momentum down (1)

2 go up (one slightly) and only one goes down so down one is faster (1)

Max 5

[11]

73. In this experiment **alpha particles** were **scattered** by thin films of metals such as gold.

The experiment led to the conclusion that the atom had a **positively charged** nucleus of diameter approximately  $10^{-15}$  m and containing

**most of the mass** of the atom

[5]
