## Mark Scheme for June 2019

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of candidates of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, Cambridge Nationals, Cambridge Technicals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support, which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by examiners. It does not indicate the details of the discussions which took place at an examiners' meeting before marking commenced.

All examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the report on the examination.

Annotations available in RM Assessor

| Annotation | Meaning |
| :--- | :--- |
|  | Correct response |
| A | Incorrect response |
| BOD | Omission mark |
| CON | Benefit of doubt given |
| RE | Contradiction |
| SF | Rounding error |
| ECF | Error in number of significant figures |
| L1 | Error carried forward |
| L2 | Level 1 |
| L3 | Level 2 |
| NBOD | Level 3 |
| SEEN | Benefit of doubt not given |
|  | Noted but no credit given |
| I | Ignore |
|  |  |

Abbreviations, annotations and conventions used in the detailed Mark Scheme (to include abbreviations and subject-specific conventions).

| Annotation | Meaning |
| :---: | :---: |
| DO NOT ALLOW | Answers which are not worthy of credit |
| IGNORE | Statements which are irrelevant |
| ALLOW | Answers that can be accepted |
| () | Words which are not essential to gain credit |
| - | Underlined words must be present in answer to score a mark |
| ECF | Error carried forward |
| AW | Olternative wording |
| ORA | Or reverse argument |

## Subject-specific Marking Instructions

## INTRODUCTION

Your first task as an Examiner is to become thoroughly familiar with the material on which the examination depends. This material includes:

- the specification, especially the assessment objectives
- the question paper
- the mark scheme.

You should ensure that you have copies of these materials.
You should ensure also that you are familiar with the administrative procedures related to the marking process. These are set out in the OCR booklet Instructions for Examiners. If you are examining for the first time, please read carefully Appendix 5 Introduction to Script Marking: Notes for New Examiners.

Please ask for help or guidance whenever you need it. Your first point of contact is your Team Leader.

| Question |  |  | Answer | Marks | AO | Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | (a) |  | A: (di)acyl chloride $\checkmark$ <br> B: (di)amine | 2 | $1.1 \times 2$ | IGNORE arene/benzene/aromatic ring/secondary/ DO NOT ALLOW phenyl/amide/acyl on its own |
| 1 | (b) |  | Angle $120^{\circ}$ <br> three groups/sets of electrons/ 3 areas of electron density (around C) $\sqrt{ }$ <br> repel and get as far away as possible/minimise repulsion $\checkmark$ | 3 | $\begin{aligned} & 2.1 \\ & 2.1 \\ & 1.1 \end{aligned}$ | ALLOW 117-122 Mark separately (i.e. no ecf) IGNORE three (bonding) pairs |
| 1 | (c) |  | FIRST CHECK THE ANSWER ON ANSWER LINE If answer = $\mathbf{2 6}$ ( $\mathbf{g}$ ) award 2 marks <br> Amount benzene-1,4-dicarboxylic acid $=32 / 166=0.19 \mathrm{~mol} \checkmark$ <br> Mass compound $\mathbf{A}=0.19 \times 0.67 \times 203=26(\mathrm{~g})$ (nearest whole number) | 2 | $2.4 \times 2$ | ALLOW ecf from incorrect number of moles |
| 1 | (d) |  | step 1: (conc) ammonia/ $\mathrm{NH}_{3}$ <br> step 2: $\mathrm{Sn}+\underline{\text { conc }} \mathrm{HCl} /$ names $\checkmark$ | 2 | $\begin{aligned} & 2.3 \\ & 2.3 \end{aligned}$ | IGNORE heat/reflux/ethanolic but any other additional reagents is CON |
| 1 | (e) | (i) | hydrogen (bonds) $\checkmark$ | 1 | 1.1 |  |
| 1 | (e) | (ii) |  | 1 | 1.1 | BOTH dotted lines required but not lone pairs or partial charges |
| 1 | (f) | (i) | Heat/ reflux with $\mathrm{HCl} / \mathrm{H}_{2} \mathrm{SO}_{4} / \mathrm{NaOH} /$ acid / alkali / names $\checkmark$ | 1 | 1.2 | DO NOT ALLOW conc. $\mathrm{H}_{2} \mathrm{SO}_{4}$ |
| 1 | (f) | (ii) | Answer depends on catalysts chosen in (f)(i): alkaline hydrolysis: | 2 | $1.2 \times 2$ | ALLOW salts rather than cation/ anion ALLOW any unambiguous representation |
