## A-level PHYSICS

## Paper 3

## Section B Medical physics

Monday 3 June 2019 Afternoon

## Materials

For this paper you must have:

- a pencil and a ruler
- a scientific calculator
- a Data and Formulae Booklet.

Time allowed: The total time for both sections of this paper is 2 hours. You are advised to spend approximately 50 minutes on this section.

## Instructions

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer all questions.
- You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Do all rough work in this book. Cross through any work you do not want to be marked.
- Show all your working.

| 4 |  |
| TOTAL |  |

## Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 35 .
- You are expected to use a scientific calculator where appropriate.
- A Data and Formulae Booklet is provided as a loose insert.

## Section B

Answer all questions in this section.

| 0 | 1 | Car drivers must be able to |
| :--- | :--- | :--- |

- read a speedometer from a distance of 50 cm
- read a number plate from a distance of 20.5 m .

A driver has an unaided far point of 55 cm and an unaided near point of 25 cm .

| $\mathbf{0}$ | $\mathbf{1}$ | $\mathbf{1}$ |
| :--- | :--- | :--- |

Tick ( $\checkmark$ ) one box.

| Astigmatism |  |
| :---: | :--- |
| Hypermetropia |  |
| Myopia |  |

| $\mathbf{0}$ | $\mathbf{1}$ | $\mathbf{2}$ Figure 1 shows the position of a number plate at a distance of 20.5 m in front of the |
| :--- | :--- | :--- | :--- | driver's unaided eye.

Figure 2 shows the same situation and the position of a corrective lens.
Complete both ray diagrams to show how and where the image of the number plate is formed in each case.
Add a suitable lens to Figure 2.

Figure 1
Without corrective lens

Figure 2
With corrective lens

position of lens not to scale

## Question 1 continues on the next page

| $\mathbf{0}$ | $\mathbf{1}$ | $\mathbf{3}$ An optician considers the use of three different lenses, $\mathbf{A}, \mathbf{B}$ and $\mathbf{C}$, for use by the |
| :--- | :--- | :--- | :--- | driver when driving.

Power of $\mathbf{A}=-2.18 \mathrm{D}$
Power of $\mathbf{B}=-1.77 \mathrm{D}$
Power of $\mathbf{C}=+1.95 \mathrm{D}$
Deduce which lens is suitable.
Support your answer with calculations.

| $\mathbf{0}$ | $\mathbf{2}$ Three customers, $\mathbf{P}, \mathbf{Q}$ and $\mathbf{R}$, are sitting in a café listening to music from a |
| :--- | :--- | loudspeaker.

Customer $\mathbf{P}$ is 11 m from the loudspeaker. At the position of customer $\mathbf{P}$, the sound intensity is $3.4 \times 10^{-8} \mathrm{~W} \mathrm{~m}^{-2}$.

Calculate the sound intensity at the new position of customer $\mathbf{P}$. Assume that the loudspeaker is a point source.
 position of customer $\mathbf{R}$.

Calculate the ratio $\frac{\text { sound intensity at the position of } \mathbf{Q}}{\text { sound intensity at the position of } \mathbf{R}}$.
$\qquad$

| $\mathbf{0}$ | $\mathbf{2}$ | $\mathbf{3}$ Customer $\mathbf{Q}$ perceives the loudness of the sound differently to customer $\mathbf{R}$....$~$ |
| :--- | :--- | :--- | :--- |

Discuss whether the use of intensity level or intensity is more appropriate to compare the perceived loudness.
$\qquad$
$\qquad$
$\qquad$
$\qquad$

Customer $\mathbf{P}$ is 80 years old and has hearing loss due to her age.
Customer $\mathbf{Q}$ is 35 years old and has hearing loss due to working in an extremely noisy environment.
Customer $\mathbf{R}$ is 35 years old and has no hearing loss.
The hearing defects of $\mathbf{P}$ and $\mathbf{Q}$ affect their perception of the music being played.
Describe how their perceptions are different from that of $\mathbf{R}$.

| 0 | 4 |
| :--- | :--- | Ultrasound is commonly used in medical procedures.

| 0 | $\mathbf{4}$ | -1 An ultrasound A-scan is used to find the length $l$ of an eye as shown in Figure 6. |
| :--- | :--- | :--- |

Figure 7 shows the simplified A-scan for the eye. A short pulse of ultrasound is transmitted at time $t=0$

The average speed of ultrasound in the eye $=1560 \mathrm{~m} \mathrm{~s}^{-1}$.
Figure 6

Figure 7

Calculate $l$.

| 0 | 4 | .2 |
| :--- | :--- | :--- | Amniocentesis is a procedure where a tube is inserted into a uterus to remove some cells and fluid from around a foetus. For the procedure to be carried out safely the positions of the needle, foetus and placenta must be determined accurately.

Discuss whether an A-scan or a B-scan should be used for amniocentesis.
In your answer, you should:

- outline the differences between an A-scan and a B-scan
- describe the advantages and disadvantages of each type of scan
- explain why your chosen scan should be used for this procedure.

END OF QUESTIONS
