

Additional Assessment Materials
Summer 2021

Pearson Edexcel GCSE in Biology (1BI0)
Foundation

Resource Set Topic 8: Exchange and
Transport in Animals

Questions

(Public release version)

Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

General guidance to Additional Assessment Materials for use in 2021

Context

- Additional Assessment Materials are being produced for GCSE, AS and A levels (with the exception of Art and Design).
- The Additional Assessment Materials presented in this booklet are an **optional** part of the range of evidence teachers may use when deciding on a candidate's grade.
- 2021 Additional Assessment Materials have been drawn from previous examination materials, namely past papers.
- Additional Assessment Materials have come from past papers both published (those materials available publicly) and unpublished (those currently under padlock to our centres) presented in a different format to allow teachers to adapt them for use with candidate.

Purpose

- The purpose of this resource to provide qualification-specific sets/groups of questions covering the knowledge, skills and understanding relevant to this Pearson qualification.
- This document should be used in conjunction with the mapping guidance which will map content and/or skills covered within each set of questions.
- These materials are only intended to support the summer 2021 series.

2 (a) Figure 2 shows alveoli from a healthy lung.

Figure 2

Smoking can cause a condition called emphysema.

Figure 3 shows alveoli from a person with emphysema.

Figure 3

Use words from the box to complete the following sentences.

(2)

breathing	diffusion	larger
osmosis	smaller	thicker

The alveoli from the person with emphysema have a
surface area than the alveoli from a healthy lung.

The surface area of the alveoli will affect how much oxygen moves into the blood
by the process of

(b) The graph in Figure 4 shows the volume of oxygen an athlete absorbs at different running speeds.

Figure 4

(i) Describe the trend shown in Figure 4.

(2)

(ii) Which uses more oxygen when the running speed of the athlete changes from 4 to 6 km per hour?

(1)

- A** increasing aerobic respiration
- B** increasing anaerobic respiration
- C** decreasing aerobic respiration
- D** decreasing anaerobic respiration

(iii) Explain why the athlete produces lactic acid when running at 14 km per hour.

(2)

- 8 (a) Figure 19 shows a diagram of a red blood cell from a turtle and a diagram of a red blood cell from a human.

Figure 19

- (i) These cells are animal cells.

Animal cells do not have

(1)

- A** cytoplasm
- B** a cell membrane
- C** a cell wall
- D** mitochondria

- (ii) The actual length of the red blood cell from a turtle is $20.5\ \mu\text{m}$.

Calculate the length of the magnified image of the red blood cell of the turtle when magnified $400\times$.

(2)

..... μm

- (iii) The width of the human red blood cell, when magnified $400\times$, is $3.08\ \text{mm}$.

Calculate the actual width of the cell and show your answer in standard form.

(2)

..... mm

(b) Red blood cells are carried in veins and arteries.

Figure 20 shows the equipment used to measure the elasticity of an artery.

Figure 20

(i) Describe a method you could use to see how much the ring of tissue from an artery could stretch before it no longer returned to its original size.

(3)

.....

.....

.....

.....

.....

.....

(ii) Give **one** safety precaution you need to take when handling animal tissue such as blood vessels.

(1)

.....

.....

4 (a) Figure 6 shows a cross section of an artery and a vein.

(Source: © The University of Kansas Medical Center)

Figure 6

(i) Measure the length of line A and the length of line B in mm.

(1)

line A mm

line B mm

(ii) State the ratio of the thickness of the artery wall to the thickness of the vein wall.

(1)

.....

(b) (i) Give a reason why veins have valves.

(1)

.....
.....

(ii) Name the artery that transports oxygenated blood from the heart to the body.

(1)

.....

- (c) A scientist investigated the relationship between exercise and the ability to run at 3 metres per second for 20 minutes.

The scientist collected data from six groups of people.

Each group exercised for a different number of hours per week for six months.

There were 100 people in each group.

Figure 7 shows their results.

group	number of hours of exercise per week	number of people who could run at 3 metres per second for 20 minutes
A	0	9
B	2	20
C	4	33
D	6	52
E	8	61
F	10	62

Figure 7

- (i) Describe the relationship shown by this data.

(2)

.....

.....

.....

.....

.....

.....

.....

(ii) Explain why some people's leg muscles tired quickly and developed cramp when they were running.

(3)

.....

.....

.....

.....

.....

.....

.....

9 (a) A student investigated respiration in three different organisms.

Red hydrogencarbonate indicator was placed in each of three test tubes.

Gauze was placed in each test tube to hold the organisms.

In test tube 1 the student placed four germinating peas.

In test tube 2 the student placed four dried peas.

In test tube 3 the student placed four mealworms.

Bungs were added to each of the test tubes.

The three test tubes were left for one hour.

The equipment used is shown in Figure 16.

Figure 16

(i) State **two** ways this method could be improved to make the results for these three organisms more comparable.

(2)

1.....

.....

2.....

.....

(ii) Describe a suitable control for this investigation.

(2)

.....

.....

.....

.....

(b) Hydrogencarbonate indicator changes from red to yellow when more carbon dioxide is present.

The results for this investigation are shown in Figure 17.

organisms	colour of hydrogencarbonate indicator
germinating peas	yellow
dried peas	red
mealworms	yellow

Figure 17

(i) Explain why the result for the germinating peas is different from the result for the dried peas.

(2)

.....

.....

.....

.....

.....

(ii) How was the carbon dioxide produced in this investigation?

(1)

- A** by photosynthesis
- B** when glucose is broken down in the presence of oxygen
- C** when glucose is broken down in the absence of oxygen
- D** by the reaction between oxygen and water

1 Figure 1 shows a diagram of the heart.

Figure 1

(a) (i) Draw arrows on Figure 1 to show how oxygenated blood moves through the heart. (1)

(ii) What happens when the right ventricle contracts? (1)

- A** valve T opens
- B** valve T closes
- C** blood is forced into the left atrium
- D** blood is forced into the pulmonary vein

(iii) Draw **one** straight line from each structure to its function.

(2)

structure	function
pulmonary vein	carries deoxygenated blood
	forces blood towards body organs
	carries blood from the lungs to the heart
left ventricle	takes blood to the right side of the heart
	forces blood towards the lungs

(b) Figure 2 shows a dissected vein.

Figure 2

- (i) Explain how the valves in veins help the blood, at low pressure, flow towards the heart.

(2)

- (ii) The equipment used to dissect the vein was cleaned and put into disinfectant.

State why this equipment was put into disinfectant.

(1)

5.

- (c) (i) Which row of the table shows the type or types of respiration that use glucose?

(1)

	aerobic respiration	anaerobic respiration
<input type="checkbox"/> A	yes	yes
<input type="checkbox"/> B	yes	no
<input type="checkbox"/> C	no	yes
<input type="checkbox"/> D	no	no

- (ii) A scientist measured the rate of respiration in a person when sleeping and then running at different speeds.

Figure 12 shows the results.

activity	speed in km per hour	respiration rate in kJ per minute
sleeping	0	3
running slowly	8	90
running quickly	12	130

Figure 12
