

GCSE Chemistry A (Gateway Science) J248/03 C1-C3 and C7 Higher (Higher Tier)

Question Set 16

1 Anhydrous copper sulfate reacts with water to make hydrated copper sulfate.

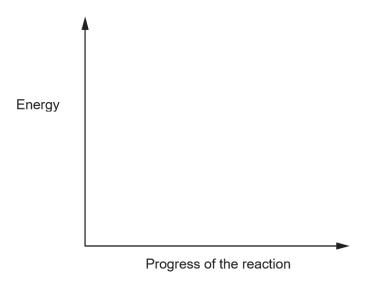

$$CuSO_4 + 5H_2O \longrightarrow CuSO_4.5H_2O$$

Anhydrous copper sulfate

Anhydrous copper sulfate

The reaction is **exothermic**.

(a) Draw and label a reaction profile for this reaction.

(b) Two students investigate the burning of methane in oxygen.

Look at the table of bond energies.

Bond	Bond energy (kJ/mol)
O–H	459
C=O	799
O=O	494
C–H	

The reaction is exothermic and 802 kJ of energy are given out when 1 mole of methane burns.

The students have looked up the bond energies. They have different values for the C–H bond energy.

Student A thinks the C–H bond energy is 432 kJ/mol. Student B thinks the C–H bond energy is 411 kJ/mol.

Who is correct?

Use the bond energies and the energy given out in the reaction to calculate the C–H bond energy.

Total Marks for Question Set 16: 6
