Question Set 17

1 Copper oxide can be reduced to copper by reaction with hydrogen.

A reaction mixture contains 1.59 g of copper oxide and 0.20 g of hydrogen.

1.27 g of copper and 0.36 g of water are made.

Calculate the number of moles of each substance to determine the **limiting reactant** in this reaction.

Explain your choice.

The relative atomic mass of Cu is 63.5, of O is 16 and of H is 1.

Number of moles of CuO =

Number of moles of H₂ =

Number of moles of Cu =

Number of moles of H₂O =

The limiting reactant is because
