Question Set 3

1 Find the value of $\sum_{r=1}^5 2^r (r-1)$. [2]

2 The graph of $y = |1-x| - 2$ is shown in Fig. 2.

Fig. 2

Determine the set of values of x for which $|1-x| > 2$. [4]

3 A particular phone battery will last 10 hours when it is first used. Every time it is recharged, it will only last 98% of its previous time.

Find the maximum total length of use for the battery. [3]

4 Fig. 4 shows the regular octagon ABCDEFGH.

Fig. 4

$\vec{AB} = \mathbf{i}$, $\vec{CD} = \mathbf{j}$, where \mathbf{i} is a unit vector parallel to the x -axis and \mathbf{j} is a unit vector parallel to the y -axis.

Find an exact expression for \vec{BC} in terms of \mathbf{i} and \mathbf{j} . [3]

- 5 Fig. 5 shows part of the curve $y = \operatorname{cosec} x$ together with the x - and y -axes.

Fig. 5

- (a) For the section of the curve which is shown in Fig. 5, write down
- (i) the equations of the two vertical asymptotes, [2]
 - (ii) the coordinates of the minimum point. [1]
- (b) Show that the equation $x = \operatorname{cosec} x$ has a root which lies between $x = 1$ and $x = 2$. [2]
- (c) Use the iteration $x_{n+1} = \operatorname{cosec}(x_n)$, with $x_0 = 1$, to find
- (i) the values of x_1 and x_2 , correct to 5 decimal places, [1]
 - (ii) this root of the equation, correct to 3 decimal places. [1]
- (d) There is another root of $x = \operatorname{cosec} x$ which lies between $x = 2$ and $x = 3$.
- Determine whether the iteration $x_{n+1} = \operatorname{cosec}(x_n)$ with $x_0 = 2.5$ converges to this root. [1]
- (e) Sketch the staircase or cobweb diagram for the iteration, starting with $x_0 = 2.5$, on the diagram in the Resource Material. [3]

6 (a) (i) Write down the derivative of e^{kx} , where k is a constant. [1]

(ii) A business has been running since 2009. They sell maths revision resources online.

Give a reason why an exponential growth model might be suitable for the annual profits for the business. [1]

Fig. 6 shows the relationship between the annual profits of the business in thousands of pounds (y) and the time in years after 2009 (x). The graph of $\ln y$ plotted against x is approximately a straight line.

Fig. 6

(b) Show that the straight line is consistent with a model of the form $y = Ae^{kx}$, where A and k are constants. [2]

(c) Estimate the values of A and k . [4]

(d) Use the model to predict the profit in the year 2020. [3]

(e) How reliable do you expect the prediction in part (d) to be? Justify your answer. [1]

- 7 (a) Express $\frac{1}{x} + \frac{1}{A-x}$ as a single fraction. [1]

The population of fish in a lake is modelled by the differential equation

$$\frac{dx}{dt} = \frac{x(400-x)}{400}$$

where x is the number of fish and t is the time in years.

When $t = 0$, $x = 100$.

- (b) In this question you must show detailed reasoning.

Find the number of fish in the lake when $t = 10$, as predicted by the model. [8]

- 8 (a) The curve $y = \frac{1}{(1+x^2)^2}$ is shown in Fig. 8.

Fig. 8

- (i) Show that $\frac{d^2y}{dx^2} = \frac{20x^2 - 4}{(1+x^2)^4}$. [5]

- (ii) In this question you must show detailed reasoning.

Find the set of values of x for which the curve is concave downwards. [3]

- (b) Use the substitution $x = \tan\theta$ to find the exact value of $\int_{-1}^1 \frac{1}{(1+x^2)^2} dx$. [8]
