H557/01 Fundamentals of physics

Question Set 4 (Module 6 MCQs)

1. Which of the following changes doubles the flux in a magnetic circuit?

- 1 doubling the permeance
- 2 doubling the current-turns
- 3 halving the circuit length

- A 1, 2 and 3 are correct
- B only 1 and 2 are correct
- C only 2 and 3 are correct
- D only 1 is correct

[1]

2. An aluminium ring is free to move on a steel rod. When the power supply is on, the ring floats.

Which of the following is correct?

- A An a.c. or d.c. power supply can be used.
- B The induced current in the ring is in the same direction as the current in the coil.
- C The only purpose of the steel rod is to support the ring.
- D When the ring is pushed down towards the coil more flux links it and the induced current increases.

[1]

3

A 6 V a.c. supply is connected to the 100 turn primary coil of an ideal transformer. The 200 turn secondary coil runs a lamp which dissipates 24 W.

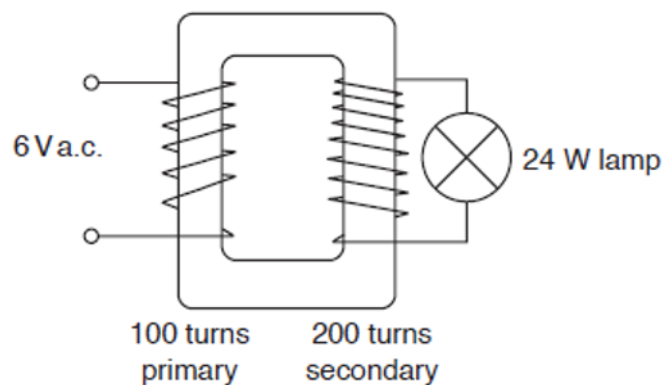

Which is the best estimate of the current in the secondary coil?

- A $\frac{1}{4}$ A
- B $\frac{1}{2}$ A
- C 2 A
- D 4 A

[1]

4

A 6 V a.c. supply is connected to the 100 turn primary coil of an ideal transformer. The 200 turn secondary coil runs a lamp which dissipates 24 W.

Which is the best estimate of the current in the primary coil?

- A $\frac{1}{4}$ A
- B $\frac{1}{2}$ A
- C 2 A
- D 4 A

[1]

5

An oil drop of mass m charged by one electron is balanced between two parallel horizontal metal plates. A potential difference V is applied between the plates as shown.

Which expression shows the balanced electrical and gravitational forces acting?

- A $eVd = mg$
- B $\frac{eV}{d} = mg$
- C $\frac{V}{ed} = mg$
- D $\frac{dV}{e} = mg$

[1]

6

The graph shows how the binding energy per nucleon varies with the nucleon number for stable nuclei.

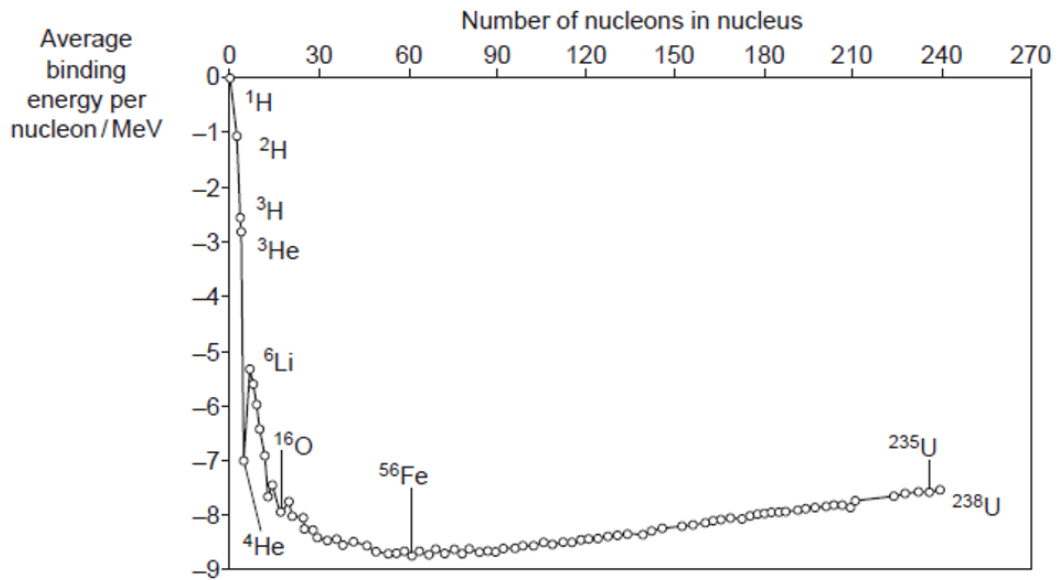

Which **one** of the following statements is correct?

- A All unstable nuclei have less binding energy than stable nuclei.
- B ^{56}Fe requires less energy per nucleon than other stable nuclei to pull it apart into individual nucleons.
- C Binding energy can be released in the fission of some heavy elements
- D Binding energy is the energy released when a nucleus breaks down into individual nucleons.

[1]

7

The graph shows how the binding energy per nucleon varies with the nucleon number for stable nuclei.

Which is the best estimate for the total binding energy for a nucleus of $^{16}_8\text{O}$ (Oxygen)?

- A - 10 pJ
- B - 20 pJ
- C - 64 pJ
- D - 128 pJ

[1]

8

Isotopes of a given element all have the same

- A proton number.
- B charge / mass ratio.
- C neutron number.
- D nucleon number.

[1]

9

${}_{82}^{214}\text{Pb}$ decays by a series of transformations to a final stable product.

The particles emitted are: β , β , α , β , β , α .

Which one of the isotopes below is the final product?

[1]

10

An electron is travelling at a speed of $3.1 \times 10^5 \text{ ms}^{-1}$.

What is its kinetic energy in electronvolts?

A $4.4 \times 10^{-20} \text{ eV}$

B $8.8 \times 10^{-7} \text{ eV}$

C 0.27 eV

D 500 eV

[1]

11

The diagram shows the beta energy spectrum for emissions from a radioactive isotope.

Which statement is correct?

- A The maximum energy of beta emissions is about 0.1 MeV.
- B More than half the beta particles are emitted with less than half the maximum energy.
- C The “missing energy” in beta emissions is taken by the recoiling nucleus.
- D The most frequent energy of beta emission is about 1.16 MeV.

[1]

12

A transformer runs a 36.0W lamp from a 24.0V a.c. supply.

What is the current in the secondary coil?

- A 1.5A
- B 3.0A
- C 4.0A
- D 6.0A

[1]

13

A transformer runs a 36.0 W lamp from a 24.0 V a.c. supply.

What is the best estimate for the rate of change of flux in the transformer core?

- A 0.12 Wbs^{-1}
- B $0.12 \text{ Tm}^{-2} \text{ s}^{-1}$
- C 12 Wbs^{-1}
- D $12 \text{ Tm}^{-2} \text{ s}^{-1}$

[1]

14

- 1 An α particle approaches an atomic nucleus and is scattered through angle θ . The path of the particle is offset as shown.

Which change on its own would cause the scattering angle θ to increase?

- A Use an α particle with higher kinetic energy.
- B Have a smaller offset distance for the initial trajectory.
- C Use a target nucleus with a smaller charge.
- D Use a target nucleus with a smaller mass.

[1]

15

A particle of charge q and mass m travels in a vacuum in a region of constant magnetic flux density B .
It moves at a constant speed v in a circle of radius r .

Which expression gives the time for the particle to complete one circle of its path?

A $\frac{2\pi m}{Bqr}$

B $\frac{2\pi mr}{Bq}$

C $\frac{2\pi m}{Bq}$

D $\frac{Bq}{2\pi m}$

[1]

16

A particle of charge q and mass m travels in a vacuum in a region of constant magnetic flux density B .
It moves at a constant speed v in a circle of radius r .

A proton and an α particle, with the same velocity, enter the region of constant magnetic flux density.

What is the ratio of the radii of their paths, $\frac{r_{\alpha}}{r_{\text{proton}}}$?

A $\frac{1}{4}$

B $\frac{1}{2}$

C 2

D 4

[1]

17

The graph shows neutron number N plotted against proton number Z for stable nuclei.

N = neutron number

Which statement about stable nuclei is correct?

Which statement about stable nuclei is correct?

- A For elements up to about $Z = 50$ $N \approx Z$.
- B Elements with $Z \approx 80$ have more protons than neutrons.
- C Greater $\frac{N}{Z}$ ratio is needed to hold larger nuclei together, because only neutrons take part in the strong nuclear force of attraction to balance electrostatic repulsion.
- D Greater $\frac{N}{Z}$ ratio is needed to hold larger nuclei together because only nearest neighbour nucleons take part in the strong nuclear force of attraction to balance electrostatic repulsion.

[1]

18

The electric potential at a distance r from a positive point charge Q is 450V.
The potential increases to 500V when the distance from the point charge decreases by 1.5m.

What is the value of r ?

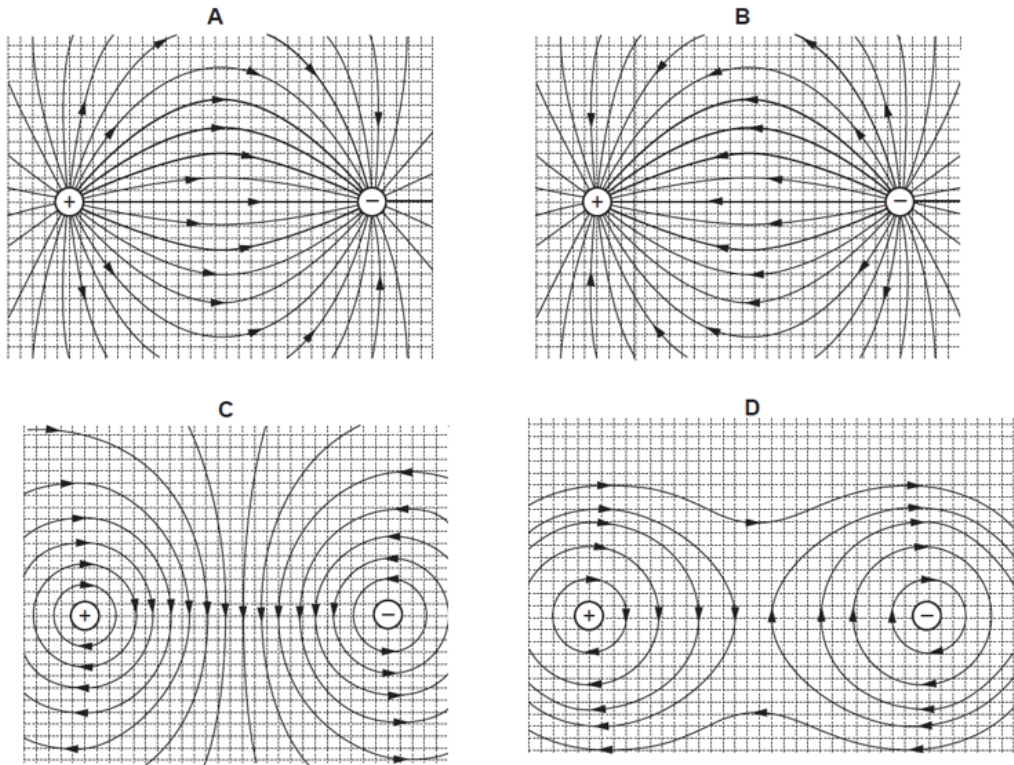

- A 1.5m
- B 7.9m
- C 15m
- D 29m

[1]

19

A positive and a negative charge of equal magnitude are placed near each other.

Which diagram best represents the electric field of the two charges?

[1]

20

Two horizontal metal plates are 5.0 mm apart.
The plates are at potentials of +120V and +40V.

What is the force experienced by an electron in the electric field between the plates?

- A $2.6 \times 10^{-18} \text{ N}$
- B $5.1 \times 10^{-18} \text{ N}$
- C $2.6 \times 10^{-15} \text{ N}$
- D $5.1 \times 10^{-15} \text{ N}$

[1]

21

Protons consist of quarks.

The 'up' anti-quark has a charge of $-\frac{2e}{3}$ and the 'down' anti-quark has a charge of $+\frac{1e}{3}$, where e is the charge on an electron.

What does an **anti-proton** contain?

	Up anti-quarks	Down anti-quarks
A	0	3
B	1	1
C	1	2
D	2	1

[1]

22

A radioactive nucleus is formed by β -decay. This nucleus then decays by α -emission.

Which graph of nucleon number N plotted against proton number Z shows the β -decay followed by the α -emission?

[1]

23

The graph shows how the flux linkage $N\Phi$ through a coil changes with time when the coil is moved into a magnetic field.

Which of the following graphs shows the magnitude of the induced e.m.f. \mathcal{E} in the coil over the same time period?

[1]

24

The graph shows neutron number N plotted against proton number Z for stable nuclei.

Which statements about stable nuclei are correct?

- 1 Nuclei of elements with $Z > 20$ have more protons than neutrons.
- 2 For the nuclei of lighter elements $N \approx Z$.
- 3 Greater $\frac{N}{Z}$ ratio is needed to hold larger nuclei together, because only nearest neighbour nucleons take part in the strong nuclear force of attraction to balance electrostatic repulsion.

- A 1, 2 and 3 are correct
- B only 1 and 2 are correct
- C only 2 and 3 are correct
- D only 1 is correct
