Question Set 28

1

A ball is projected horizontally twice with different velocities from 44 m above the base of a vertical cliff as shown in **Fig.1**.

Fig.1

The first throw path **F** has initial horizontal velocity of 8.0 ms^{-1} .

(a)

Calculate the horizontal range R for this path. You may ignore the effects of air resistance.

Gravitational acceleration, $g = 9.8 \text{ ms}^{-2}$.

$R = \dots\dots\dots \text{m}$ [3]

b)

The second path **S** is also from a horizontal projection and achieves a range that is three times larger ($3R$) than the first path **F**.

State the initial horizontal projection velocity for path **S**. Make your reasoning clear.

initial projection velocity = $\dots\dots\dots \text{ms}^{-1}$ [2]
