

## **A level Physics B**

**H557/03** Practical skills in physics

### **Question Set 3**

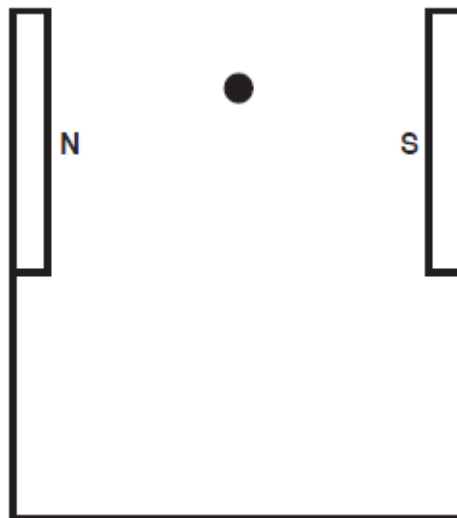

- 1 (a) (i) This question is about the measurement of the **B**-field between a pair of slab magnets.

**Fig. 1.1** shows the arrangement of the apparatus used in the experiment. It consists of a pair of slab magnets, with opposite poles facing one another, fixed onto a piece of U-shaped soft iron. The magnet assembly sits on top of an electronic balance. A rigidly fixed wire is shaped to carry a current  $I$  between the magnetic poles. The force created alters the balance reading.

**Fig.1.1**

**Fig. 1.2** shows a section through the magnet assembly. The dot in the centre represents the wire.

**Fig.1.2**

Draw, on **Fig. 1.2**, at least **three** lines to represent the magnetic field in the region between the magnetic poles when the current in the wire is zero.

[2]

- (ii) Explain why the balance reading changes to a new value when the wire carries a current.

[2]

- (b) (i) The longest length of wire that could be used is 5.0 cm. The current  $I$  is varied and the change in the balance reading is recorded as shown in **Fig. 1.3**.

$I/A$	Change in balance reading /g			Mean change/g	$F/\times 10^{-3}$ N
	Trial 1	Trial 2	Trial 3		
0.5	0.08	0.05	0.06	0.06	0.59
1.0	0.14	0.16	0.16	0.15	1.5
1.5	0.22	0.20	0.23	0.22	2.2
2.0	0.31	0.29	0.31	0.30	2.9
2.5	0.38	0.39	0.35		
3.0	0.44	0.48	0.48		

**Fig. 1.3**

Complete the table by calculating the mean change in balance reading and the corresponding values of force  $F$  for the last two current values.  
 $g = 9.8 \text{ Nkg}^{-1}$

[2]

- (ii) Use the table to determine the uncertainty in  $F$ . Explain your reasoning.

[2]

- (iii) Plot the last two points from the table, **Fig. 1.3**, on the graph **Fig. 1.4**. Draw a line of best fit.

**Fig. 1.4**

[2]

- (iv) Use the graph to estimate the value of the **B**- field between the faces of the slab magnets.

$B = \dots\dots\dots$  mT

[3]

**Total Marks for Question Set 3: 13**
