Question Set 14

- 1 (a) A student is investigating an unidentified component found in the laboratory. The table shows the results from the lab book of the student.

V/V	I/mA
- 5.0	- 5.0
+ 5.0	+ 5.0
+ 10.0	+ 30.0

The potential difference across the component is V and the current through it is I .

- (i) Calculate the power dissipated by the component when V is +10.0 V.

power = _____ W [1]

- (ii) Analyse the data in the table and hence identify the component.

[3]

- (b) Fig. 24 shows a circuit with a battery and two resistors.

Fig. 24

The resistor **X** has length 8.0×10^{-3} m, cross-sectional area 1.2 mm^2 and is made of a material of resistivity $1.5 \times 10^{-2} \Omega \text{ m}$. The battery has e.m.f. 3.0 V and negligible internal resistance. The resistor **Y** has resistance 68Ω .

Calculate the current I in the circuit.

$I =$ _____ A [3]

Total Marks for Question Set 14: 7
