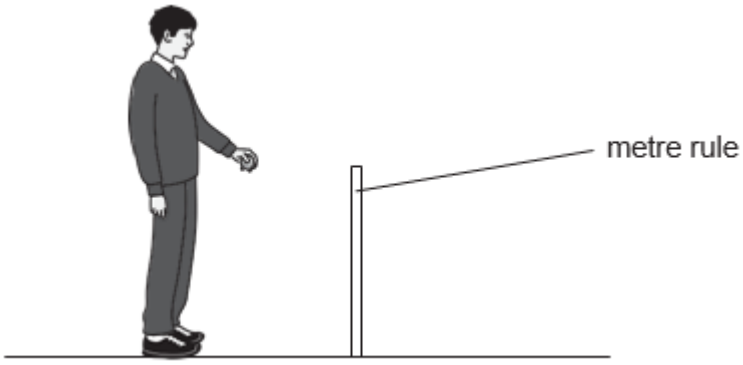
Question Set 10

1 A student wants to investigate how a ball bounces.

He drops the ball from different heights and measures the bounce height each time.



He calculates the ratio bounce height / drop height.

The table shows his results.

Drop height (cm)	Bounce height (cm)	Bounce height / drop height
100	70	0.70
80	64	0.80
60	54	0.90
40	40	1.00
20		

(a) The student predicts the ratio bounce height / drop height to be 1.10 when the drop height is 20 cm.

(i) Suggest why he has made this prediction.

[1]

(ii) Use ideas about energy to explain why this prediction cannot be correct.

[1]

(b) Suggest **two** improvements to his experiment.

[2]

(c) The mass of the ball is 60 grams.

(i) Calculate the mass of the ball in kg.

Mass = ... kg

[1]

(ii) Calculate the potential energy of the ball when it is 0.80 m above the ground.

Use your answer to **(c)(i)** and the equation:
potential energy = mass × height × gravitational field strength

Gravitational field strength = 10 N / kg

Potential energy = ... J

[2]
