

GCSE Physics B (Twenty First Century Science)
J259/01 Breadth in Physics (Foundation Tier)

Question Set 25

1

Amir investigates melting ice.

He puts ice cubes on different materials. He then measures the time taken for each ice cube to completely melt.

Amir's results are shown in the table.

Material	Time (min)
Metal foil	86
Paper	105
Carpet	162

(a) Calculate the thermal energy needed to melt 20g of ice.

The specific latent heat of melting for ice is 334 000 J/kg.

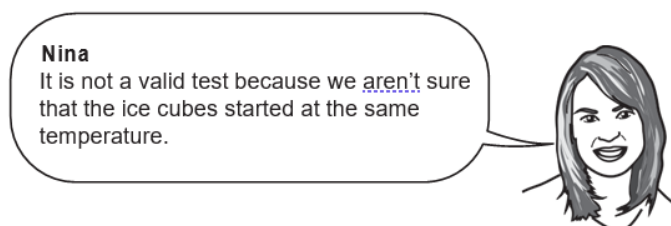

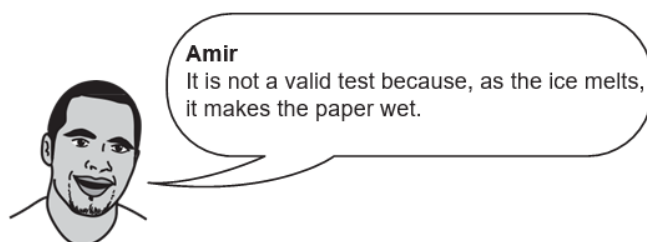

Thermal energy =J

[3]

(b) Explain why the ice cubes take different times to melt on different materials.

[2]

(c) Amir discusses the experiment with Nina, another student.

(i) Suggest improvements to the experiment to solve each of these problems.

[2]

(ii) Amir wants to speed up the experiment so it can be repeated more quickly.

Suggest **one** way he can change the experiment so that the ice melts more quickly, without making the experiment invalid.

[1]

Total Marks for Question Set 25: 8

Resource Materials

Question Set No: 25

Equations in Physics

change in internal energy = mass \times specific heat capacity \times change in temperature

energy to cause a change in state = mass \times specific latent heat

for gases: pressure \times volume = constant
(for a given mass of gas and at a constant temperature)

$(\text{final speed})^2 - (\text{initial speed})^2 = 2 \times \text{acceleration} \times \text{distance}$

energy stored in a stretched spring = $\frac{1}{2} \times \text{spring constant} \times (\text{extension})^2$

potential difference across primary coil \times current in primary coil =
potential difference across secondary coil \times current in secondary coil
