

## **GCSE Physics B (Twenty First Century Science)**

J259/02 Depth in physics (Foundation Tier)

**Question Set 14** 

**1** Americium is a radioactive material that emits alpha radiation.

Americium-241, an isotope, is used in many domestic smoke alarms. The radioactive source in the smoke alarm is under a **plastic** case.

radioactive source is under this plastic case

- (a) Suggest why the alpha radiation from the source cannot do any harm when you are close to the smoke alarm.
- (b) Explain how you could use a radiation measuring device in the laboratory to show that the smoke alarm is safe. [2]
- (c) Ling makes the following comment.

## Ling

You can use a gamma source instead of an alpha source in the smoke alarm.

This will be safe and do us no harm.

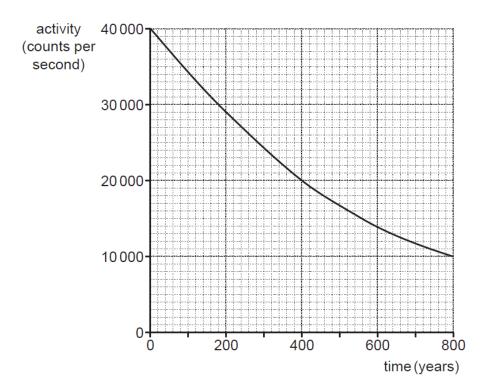

Discuss why Ling's suggestion is **not** sensible.

[2]

[1]

(d) Ling finds the activity against time graph for a different radioactive alpha source from the Internet.

(i) Use the graph to determine the half-life of the alpha source.

Show your working on the graph.

(ii) The initial activity of the source is 40 000 counts per second.

What is the activity of the source after a time equal to 2 half-lives?

(iii) On the graph axes above, sketch a graph for another sample of the alpha source that has an initial activity of 30 000 counts per second. [3]
