## Information

- The marks for the questions are shown in brackets.
- The maximum mark for this paper is 91 .
- You must answer the questions in the spaces provided. Do not write You must answer the questions in the spaces provided outside the box around each page or on blank pages.
- Show all your working.
- Do all rough work in this book. Cross through any work you do not want to be marked.
- a ruler with millimetre measurements
- a scientific calculator.

## Instructions

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer all questions.

| 0 | 1 |
| :--- | :--- | :--- |\(. \begin{aligned} \& 1 <br>

\& Describe how a non-competitive inhibitor can reduce the rate of an\end{aligned}\) enzyme-controlled reaction.

Pectin is a substance found in some fruit and vegetables.
A scientist investigated the effect of pectin on the hydrolysis of lipids by a lipase enzyme.

His results are shown in Figure 1.
Figure 1

Use Figure 1 to explain why the scientist concluded that pectin is a non-competitive inhibitor.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

Question 1 continues on the next page

The scientist also found that pectin stops the action of bile salts. He prepared two suspensions:

- suspension $\mathbf{A}$ - lipid and bile salts
- suspension B - lipid, bile salts and pectin.

He did not add lipase to either suspension.
He observed samples from the suspensions using an optical microscope. Figure 2 shows what he saw in a typical sample from each suspension.

Figure 2

| $\mathbf{0}$ | $\mathbf{1}$ | $\mathbf{3}$ Calculate the maximum length of the large lipid droplet marked $\mathbf{X}$ in Figure 2. |
| :--- | :--- | :--- | :--- |

Using a ruler with millimetre intervals always includes an uncertainty in the measurement. Use the uncertainty in your measurement to determine the uncertainty of your calculated maximum length.

You can assume there is no uncertainty in the magnification.
$\qquad$ $\mu \mathrm{m}$

Uncertainty of your calculated maximum length = $\qquad$ $\mu \mathrm{m}$

| $\mathbf{0}$ | $\mathbf{1}$ | .4 | No large lipid droplets are visible with the optical microscope in the samples from |
| :--- | :--- | :--- | :--- | suspension A.

Explain why.

## Turn over for the next question

Complete Table 1 by putting a tick $(\checkmark)$ where a cell wall component is present.
[3 marks]
Table 1

| Cell wall <br> component | Plants | Algae | Fungi | Prokaryotes |
| :--- | :--- | :--- | :--- | :--- |
| Cellulose |  |  |  |  |
| Murein |  |  |  |  |
| Chitin |  |  |  |  |

Cell walls make up much of the fibre that people eat.
Scientists investigated the relationship between the mass of fibre people ate each day and their risk of cardiovascular disease (CVD).

They gathered data from a large sample of people and used this to calculate a relative risk.

- A relative risk of 1 means there is no difference in risk between the sample and the whole population.
- A relative risk of $<1$ means CVD is less likely to occur in the sample than in the whole population.
- A relative risk of > 1 means CVD is more likely to occur in the sample than in the whole population.

Their results are shown in Figure 3. A value of $\pm 2$ standard deviations from the mean includes over $95 \%$ of the data.

Figure 3

| $\mathbf{0}$ | $\mathbf{2} .2$ | $\mathbf{2}$ A student concluded from Figure $\mathbf{3}$ that eating an extra 10 g of fibre per day would |
| :--- | :--- | :--- | significantly lower his risk of cardiovascular disease.

Evaluate his conclusion.

Question 4 continues on the next page

| 0 | $\mathbf{4}$ | $\mathbf{2}$ The scientists studied the effect of one form, KIR2DS1, of the human KIR gene on |
| :--- | :--- | :--- | mass at birth.

In the following passage the numbered spaces can be filled with biological terms.
KIR2DS1 is an (1) of the KIR gene, found at a on
chromosome 19. KIR2DS1 is 14021 bases long and is $\qquad$ into mRNA that is 1101 bases long. This mRNA is then $\qquad$ into a polypeptide 304 amino acids long. The polypeptide is then modified in the organelle, $\qquad$ (5) before forming its functional (6)__ protein structure.

Write the correct biological term beside each number below, that matches the space in the passage.
(1)
(2)
(3) $\qquad$
(4) $\qquad$
(5) $\qquad$
(6) $\qquad$

| $\mathbf{0}$ | $\mathbf{4}$ | $\mathbf{3}$ The scientists studied 1500 more births. They recorded the mass at birth of each |
| :--- | :--- | :--- | baby and the nature of the KIR gene in the mother's genome.

Some of their results are shown in Table 2.

Table 2

| Presence or absence of <br> KIR2DS1 in mother's <br> genome | Number of babies with mass at birth: |  |
| :--- | :---: | :---: |
|  | between $\mathbf{2 5 0 0} \mathbf{~ g}$ and <br> $\mathbf{4 5 0 0} \mathbf{~ g}$ | above $\mathbf{4 5 0 0 \mathbf { ~ g }}$ |
| Present | 389 | 148 |
| Absent | 606 | 173 |

The scientists used a statistical test to test the following null hypothesis:
'The presence of KIR2DS1 in the mother's genome does not affect the frequency of births above 4500 g '

Tick $(\checkmark)$ one box that gives the name of the statistical test that the scientists should use with the data in Table 2 to test this null hypothesis.

Chi-squared

Correlation coefficient

Student's t-test

Question 4 continues on the next page

| $\mathbf{0}$ | $\mathbf{4}$ | $\mathbf{4}$ The scientists calculated a $P$ value of 0.03 when testing their null hypothesis. |
| :--- | :--- | :--- | What can you conclude from this result? Explain your answer.

| :--- | :--- |

Scientists grew sunflower plants. They supplied different plants with different volumes of water.

After two days, they determined the water potential in the leaf cells by using an instrument that gave a voltage reading.

The scientists generated a calibration curve to convert the voltage readings to water potential.

Figure 8 shows their calibration curve.
Figure 8

| $\mathbf{0}$ | $\mathbf{8}$ | $\mathbf{1}$ |
| :--- | :--- | :--- | The scientists needed solutions of known water potential to generate their calibration curve.

Table 5 shows how to make a sodium chloride solution with a water potential of $-1.95 \mathrm{MPa}$

Complete Table 5 by giving all headings, units and volumes required to make $20 \mathrm{~cm}^{3}$ of this sodium chloride solution.
[2 marks]
Table 5

| Water <br> potential <br> I MPa | Concentration of <br> sodium chloride <br> solution / <br> mol dm |  |  |
| :---: | :---: | :---: | :--- |
| -1.95 | 0.04 | Volume of <br> $\mathbf{1 ~ \text { mol dm } ^ { - 3 } \text { sodium }}$ <br> chloride solution / | - |

Table 6 shows some of the concentrations of sodium chloride solution the scientists used and the water potential of each solution.

## Table 6

| Concentration of <br> sodium chloride <br> solution $/ \mathbf{~ m o l ~ d m}^{\mathbf{3}}$ | Water potential <br> / $\mathbf{~ M P a}$ |
| :---: | :---: |
| 0.04 | -1.95 |
| 0.10 | -4.87 |
| 0.12 | -5.84 |

| $\mathbf{0}$ | $\mathbf{8}$ | .2 |
| :--- | :--- | :--- | There is a linear relationship between the water potential and the concentration of sodium chloride solution.

Use the data in Table 6 to calculate the concentration of sodium chloride solution with a water potential of -3.41 MPa
$\qquad$ $\mathrm{mol} \mathrm{dm}^{-3}$

In addition to determining the water potential in the leaf cells, the scientists measured the growth of the leaves.

They recorded leaf growth as a percentage increase of the original leaf area.
Their results are shown in Figure 9.
Figure 9

| $\mathbf{0}$ | $\mathbf{8}$ | $\mathbf{3}$ One leaf with an original area of $60 \mathrm{~cm}^{2}$ gave a voltage reading of $-7 \mu \mathrm{~V}, ~$ |
| :--- | :--- | :--- | :--- |

Use Figure 8 (on page 28) and Figure 9 to calculate by how much this leaf increased in area.
Give your answer in $\mathrm{cm}^{2}$
