<b>Biology B</b>			
<b>Advanced</b>			
<b>Paper 2: Advanced Physiology, Evolution and Ecology</b>			
Tuesday 20 June 2017 – Morning		Paper Reference	
<b>Time: 1 hour 45 minutes</b>		<b>9BI0/02</b>	
<b>You must have:</b> Calculator, HB pencil, ruler			Total Marks

### Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Show your working in any calculation questions and include units in your answer where appropriate.
- Answer the questions in the spaces provided  
– *there may be more space than you need.*
- You may use a scientific calculator.
- In question(s) marked with an **asterisk** (\*), marks will be awarded for your ability to structure your answer logically showing how the points that you make are related or follow on from each other where appropriate.

### Information

- The total mark for this paper is 90.
- The marks for **each** question are shown in brackets  
– *use this as a guide as to how much time to spend on each question.*

### Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

**Answer ALL questions.**

**Some questions must be answered with a cross .**  
**If you change your mind about an answer, put a line through the box  and then mark your new answer with a cross .**

- 1 Chemical control in plants is brought about by plant growth substances such as auxins.

Auxins cause elongation of cells.

Auxins weaken the bonds between molecules found in cell walls. Molecules found in cell walls include cellulose and hemicellulose.

- (a) (i) Which of the following statements about cellulose molecules is correct?

(1)

- A they are branched polymers
- B they contain  $\alpha$ -glucose
- C they are bonded to each other by hydrogen bonds
- D they contain 1,6 glycosidic bonds

- (ii) The following statements relate to calcium pectate:

1. found in the middle lamella
2. holds cell walls together
3. prevents the movement of water

Which of the following is correct for calcium pectate?

(1)

- A statement 1 and statement 2
- B statement 1 and statement 3
- C statement 2 only
- D statement 3 only

(b) A scientist investigated apical dominance in plants.

In experiment 1, the shoot tips were cut off and the growth of lateral shoots assessed.

This was repeated in experiment 2, but auxin was placed over the cut end of the tips and the growth of lateral shoots was assessed.

The results are shown in the diagrams.

Experiment 1

Experiment 2

Explain how the interaction between auxins and cytokinins could have produced the results shown in the diagram.

2 The brain is involved in many homeostatic mechanisms.

(a) The diagram shows a vertical section through a human brain.

Which row of the table correctly matches the regions **X**, **Y** and **Z** with their functions? (1)

	Control of breathing rate	Control of balance	Temperature regulation
<input type="checkbox"/> <b>A</b>	X	Y	Z
<input type="checkbox"/> <b>B</b>	Y	Z	X
<input type="checkbox"/> <b>C</b>	Z	X	Y
<input type="checkbox"/> <b>D</b>	Z	Y	X

(b) An action potential results from the depolarisation of the membrane of a neurone.

Which row of the table shows the correct state of the ion channels during this depolarisation?

(1)

	Na <sup>+</sup> channels	K <sup>+</sup> channels
<input type="checkbox"/> <b>A</b>	closed	closed
<input type="checkbox"/> <b>B</b>	closed	open
<input type="checkbox"/> <b>C</b>	open	closed
<input type="checkbox"/> <b>D</b>	open	open

- (c) The autonomic nervous system plays a role in regulating heart rate.

The diagram shows an ECG trace from a student before and during exercise.

before exercise

during exercise

- (i) Calculate the heart rate of this student during exercise.

(1)

Answer .....

(ii) Describe how exercise results in an increased heart rate.

3 In flowering plants, pollen grains grow pollen tubes that are involved in fertilisation, producing a zygote and endosperm.

(a) (i) Which row of the table shows the correct description for these nuclei?

(1)

	Zygote nucleus	Endosperm nucleus	Pollen tube nucleus
<input type="checkbox"/> A	diploid	diploid	haploid
<input type="checkbox"/> B	diploid	triploid	haploid
<input type="checkbox"/> C	diploid	triploid	diploid
<input type="checkbox"/> D	haploid	triploid	diploid

(ii) The production of plant gamete cells involves both mitosis and meiosis.

The graph shows the DNA content of a cell during the production of a pollen grain.

(1)

The order of nuclear divisions shown in the graph is

- A meiosis, mitosis, mitosis
- B meiosis, mitosis, meiosis
- C mitosis, meiosis, meiosis
- D mitosis, mitosis, meiosis

(b) A scientist investigated the effects of chemical A and chemical B on pollen tube growth.

Chemical A prevents transcription.

Chemical B prevents translation.

Pollen grains were treated with different concentrations of these two chemicals.

The lengths of the pollen tubes they produced were compared with a control group of pollen grains.

The lengths of the pollen tubes were measured and expressed as a percentage of the control group.

The results are shown in the graphs.

(ii) Which of the following rows correctly describes the action of each substance on this postsynaptic neurone?

(1)

	Nicotine	Lidocaine	Cobra venom
<input type="checkbox"/> A	excitatory	excitatory	excitatory
<input type="checkbox"/> B	excitatory	inhibitory	inhibitory
<input type="checkbox"/> C	inhibitory	excitatory	excitatory
<input type="checkbox"/> D	inhibitory	inhibitory	inhibitory

(b) A scientist investigated the effect of the intensity of stimulation of neurones A and B on the production of an action potential in the postsynaptic neurone.

High intensity stimulation of neurones A and B causes a high frequency of impulses to arrive at the presynaptic terminals.

The results are shown in the table.

Intensity of stimulation		Production of action potential in postsynaptic neurone
Neurone A	Neurone B	
low	low	no
low	high	no
high	low	yes
high	high	no

Explain the effect of the intensity of stimulation on the production of an action potential in the postsynaptic neurone.

7 The diagram shows four varieties of rabbit.

Brown

Chinchilla

Himalayan

Albino

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

Fur colour in rabbits is controlled by four different alleles:

- the allele for brown fur,  $C$ , is dominant to all other alleles
- the allele for chinchilla fur,  $c^{ch}$ , is dominant to the alleles for Himalayan and albino
- the allele for Himalayan fur,  $c^h$ , is dominant to the allele for albino
- the allele for albino fur,  $c$ , is recessive to all other alleles

(a) (i) Describe how new combinations of alleles are produced in meiosis.

(2)

Area with horizontal dotted lines for writing the answer.

**(Total for Question 7 = 9 marks)**

- 8 The effects of light intensity and temperature on the net primary productivity (NPP) of young willow trees were investigated.

Young willow trees were grown in two greenhouses: one with high light intensity and one with low light intensity.

In each greenhouse, groups of these willow trees were kept at different temperatures for six months.

The results are shown in the graph.

- (a) (i) State what is meant by the term net primary productivity.

(1)

- (ii) Explain why temperature has different effects on NPP at these two light intensities.

(2)

\*(b) In a further investigation, succession was monitored for fifty years in an abandoned field.

The field was originally used to grow crops.

After fifty years, large numbers of coniferous trees were growing in the field.

These coniferous trees do not shed many leaves.

When compared with younger trees, older coniferous trees have a much higher proportion of tree stem, branches and roots and a lower proportion of leaves.

The following factors were monitored:

- plant biomass
- NPP
- mineral ion content of soil
- index of diversity of animals

The line graphs show the trends that happened over fifty years for each of the factors.

**Key**

- plant biomass
- NPP
- ..... mineral ion content of soil
- · - · - index of diversity of animals

Analyse the data to explain how succession is linked to the changes in this abandoned field.

9 Polyphenol oxidase is an enzyme found in many plant cells.

This enzyme catalyses the following reaction

This reaction causes cut fruit to turn brown when exposed to air.

(a) A student carried out an investigation into the rate at which grape juice produced quinone.

The graph shows the results of this investigation.

(i) Calculate the initial rate of this reaction.

(3)

Answer .....

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

- (ii) Explain why adding citric acid to cut fruit reduces the rate at which the fruit turns brown.

(2)

- (iii) The diagram shows the structures of monophenol and a molecule called tropolone.

Tropolone can be added to grape juice to slow the rate at which the juice turns brown.

monophenol

tropolone

Explain how tropolone affects the rate at which the grape juice turns brown.

(2)

DO NOT WRITE IN THIS AREA

10 The Northern elephant seal is a mammal found in the Eastern Pacific Ocean.

In the nineteenth century, Northern elephant seals were hunted and this reduced the population to about 20 seals.

The seals were listed as an Appendix II species when CITES was established in the 1970s.

The population has now recovered to over 100 000 individuals.

The seals in this population have developed health problems, including a high mortality rate for newborn pups, deformities and weak immune systems.

(a) (i) Describe the role of treaties such as CITES in maintaining global biodiversity.
