

Mark Scheme (Results)

October 2022

Pearson Edexcel International Advanced Level
In Biology (WBI14) Paper 01
Energy, Environment, Microbiology
and Immunity

Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at www.edexcel.com or www.btec.co.uk. Alternatively, you can get in touch with us using the details on our contact us page at www.edexcel.com/contactus.

Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response

	Answer	Mark
1(a)	<p>The only correct answer is A \log_{10} number of living bacterial cells</p> <p><i>B is incorrect because the total cell number plotted would not show the death phase</i> <i>C is incorrect because the exponential phase would not be a straight line</i> <i>D is incorrect because the exponential phase would not be a straight line</i></p>	(1)

Question number	Answer	Additional guidance	Mark
1(b)(i)	<p>An explanation that includes the following points:</p> <ul style="list-style-type: none"> because we do not want {other bacteria in the culture / contamination} (1) as they could {compete for nutrients / produce toxins (to the bacteria being cultured)} <p>OR</p> <ul style="list-style-type: none"> because we do not want to transfer the bacteria onto {ourselves / surroundings} as they may be {pathogenic / harmful} (1) 	<p>ACCEPT microorganisms / pathogens</p> <p>ACCEPT microorganisms competition for space</p> <p>ACCEPT prevent infection</p>	(2)

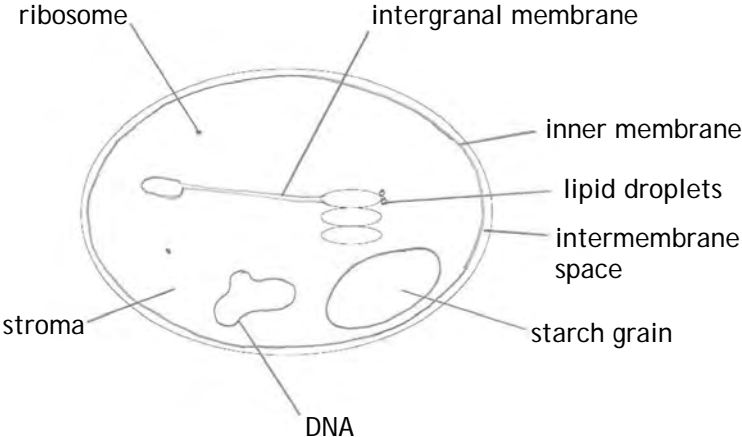

Question number	Answer	Additional guidance	Mark
1(b)(ii)	<p>An explanation that includes the following points:</p> <ul style="list-style-type: none"> • one named technique explained (1) • a second named technique explained (1) 	<p>e.g. working by a Bunsen burner + to create an updraft / to move the microorganisms in the air away / to prevent {bacteria / microorganisms / spores} falling into culture IGNORE kill bacteria in the air</p> <p>autoclaving {agar / culture fluid / equipment} using sterile equipment disinfecting work area washing hands + to kill any {bacteria / microorganisms / spores} present</p> <p>washing hands flaming necks of bottles + to prevent transferring {bacteria / microorganisms / spores} into cultures</p> <p>reducing exposure of cultures to air + to reduce chance of contamination</p> <p>close {doors / windows} + to avoid draughts</p>	(2)

Question number	Answer	Mark																								
2(a)	<table><tr><th rowspan="2">Structure</th><th colspan="4">Virus</th></tr><tr><th>Ebola only</th><th>HIV only</th><th>both Ebola and HIV</th><th>neither Ebola nor HIV</th></tr><tr><td>DNA</td><td>[x]</td><td>[x]</td><td>[x]</td><td>[x]</td></tr><tr><td>helical capsid</td><td>[x]</td><td>[x]</td><td>[x]</td><td>[x]</td></tr><tr><td>envelope</td><td>[x]</td><td>[x]</td><td>[x]</td><td>[x]</td></tr></table>	Structure	Virus				Ebola only	HIV only	both Ebola and HIV	neither Ebola nor HIV	DNA	[x]	[x]	[x]	[x]	helical capsid	[x]	[x]	[x]	[x]	envelope	[x]	[x]	[x]	[x]	(3)
Structure	Virus																									
	Ebola only	HIV only	both Ebola and HIV	neither Ebola nor HIV																						
DNA	[x]	[x]	[x]	[x]																						
helical capsid	[x]	[x]	[x]	[x]																						
envelope	[x]	[x]	[x]	[x]																						

Question number	Answer	Additional guidance	Mark
2(b)(i)	<ul style="list-style-type: none"> (RNA) reverse transcriptase 	<p>ACCEPT RNA-dependent DNA polymerase DNA nucleotidyltransferase (RNA-directed) revertase</p> <p>DO NOT ACCEPT other named enzymes / molecules</p>	(1)

Question number	Answer	Additional guidance	Mark
2(b)(ii)	<ul style="list-style-type: none"> (this DNA polymerase found in cancer cells) so healthy cells will not be affected by the drug 	ACCEPT so that DNA synthesis will not occur and the cancer cells cannot divide	(1)

Question number	Answer	Mark		
3(a)	<p>The only correct answer is B</p> <table><tr><td>ADP is phosphorylated, requiring energy</td><td>ATP is hydrolysed, releasing energy</td></tr></table> <p><i>A is incorrect because energy is not released when ADP is phosphorylated</i> <i>C is incorrect because ADP is not hydrolysed in the light-dependent reactions</i> <i>D is incorrect because ADP is not hydrolysed in the light-dependent reactions</i></p>	ADP is phosphorylated, requiring energy	ATP is hydrolysed, releasing energy	(1)
ADP is phosphorylated, requiring energy	ATP is hydrolysed, releasing energy			

Question number	Answer	Additional guidance	Mark
3(b)(i)	<p>An answer that includes three of the following points:</p> <ul style="list-style-type: none"> • DNA (loop) (1) • stroma • starch {grain / granule} (1) • inner membrane (1) • inter membrane space • intergranal membrane / (stromal) lamellae / intergranal thylakoid (1) • (small / 70S) ribosome (1) • lipid droplets 	<p>DO NOT ACCEPT if drawn as linear DNA</p> <p>DO NOT ACCEPT stoma</p>  <p>The diagram illustrates a chloroplast with various internal components labeled. A ribosome is shown as a small dot. The intergranal membrane is depicted as a network of lines. The inner membrane forms the outer boundary. Lipid droplets are represented by small circles. The intermembrane space is the area between the inner and outer membranes. The stroma is the fluid-filled space inside the chloroplast. A circular DNA molecule is shown. A starch grain is depicted as a large, oval structure.</p>	(3) EXP

Question number	Answer	Additional guidance	Mark
3(b)(ii)	<p>An answer that includes four of the following points:</p> <p>Similarities:</p> <ul style="list-style-type: none"> • both {consist of phospholipid bilayer / contain phospholipids} (1) • both have proteins (1) <p>Differences:</p> <ul style="list-style-type: none"> • thylakoid membrane has ATP synthase but outer membrane does not (1) • thylakoid membrane has {chlorophyll / carotenoids / light-absorbing pigments / PS I / PS II} but outer membrane does not (1) • thylakoid membrane has electron carriers but outer membrane does not (1) 	<p>DO NOT PIECE TOGETHER</p> <p>ACCEPT ATPase</p>	(4)

Question number	Answer	Additional guidance	Mark
4(a)	<p>The only correct answer is A 4524 cm³</p> <p><i>A is incorrect because the answer has been incorrectly rounded</i> <i>C is incorrect because the diameter has been used and the answer incorrectly rounded</i> <i>D is incorrect because the diameter has been used</i></p>		(1)

Question number	Answer	Additional guidance	Mark
4(b)(i)	<ul style="list-style-type: none"> • scale worked out as 300 (1) • 750 / 780 (years) (1) 		(2)

Question number	Answer	Additional guidance	Mark
4(b)(ii)	<p>An explanation that includes four of the following points:</p> <ul style="list-style-type: none"> • type of plant present when conditions are favourable (1) • type F found for greater number of years because { lives in a range of conditions / conditions did not change (much) / no competition from other (plant) species} (1) • conditions changed allowing type {D / E} to grow (1) • credit reason for a type of plant to disappear (1) • credit example of what plants are competing for (1) 	<p>NB Accept pollen grains for plants</p> <p>ACCEPT named condition different plants grew at different times because conditions were different in context of the plant types</p> <p>ACCEPT named condition that did not change</p> <p>ACCEPT named condition</p> <p>e.g F disappeared because conditions changed E disappeared because of competition from another species</p> <p>e.g. space, light, water, nutrients</p>	(4)

Question number	Answer	Additional guidance	Mark
5(a)(i)	<ul style="list-style-type: none"> 113 		(1)

Question number	Answer	Additional guidance	Mark
5(a)(ii)	<p>An explanation that includes the following points:</p> <ul style="list-style-type: none"> (albumin / R groups) {negatively charged / polar / hydrophilic} (1) and will therefore dissolve in the {water / blood <u>plasma</u>} (1) forms hydrogen bonds with water (1) 	<p>ACCEPT water / plasma is a polar solvent</p> <p>ACCEPT description of H bonds / weak bonds / Van der Waals forces</p> <p>DO NOT ACCEPT ionic bonds</p>	(2)

Question number	Answer	Additional guidance	Mark
5(b)(i)	<ul style="list-style-type: none"> 1.175 (g dm⁻³) 	<p>ACCEPT 3 / 3.2 / 3.24 (times higher)</p>	(1)

Question number	Answer	Additional guidance	Mark
5(b)(ii)	<p>An explanation that includes the following points:</p> <ul style="list-style-type: none">• (thickest band) albumin is the most concentrated (in this sample) (1)• (moved the furthest) albumin could be the most soluble (1)• in the solvent used (1)• (moved the furthest) albumin could be the {lowest mass / lightest} (1)	<p>ACCEPT more albumin present</p> <p>ACCEPT most (negatively) charged</p>	(3)

Question number	Answer	Additional guidance	Mark
5(c)	<p>An explanation that includes the following points:</p> <ul style="list-style-type: none"> • $15 \mu\text{mol dm}^{-3}$. is too low to activate the channel / $500 \mu\text{mol dm}^{-3}$ will activate the channel (1) • therefore sperm will not be activated in the {seminal fluid / male} / therefore sperm activated in the {uterus / female} (1) • this will avoid waste of {resources / named resource} (1) • so more {viable / healthy} sperm (1) • so more likely fertilisation will take place (1) 	<p>ACCEPT refs to high or low concentrations</p> <p>ACCEPT fewer sperm activated / more sperm activated prevent early activation sperm can swim faster / acrosome enzymes will be released / sperm ready to digest the egg cell membrane</p> <p>e.g. energy / ATP / acrosome</p> <p>ACCEPT successful</p>	(4)

Question number	Answer	Additional guidance	Mark
6(a)	<p>A description that includes three of the following points:</p> <ul style="list-style-type: none"> • whether it caused side effects (in humans) (1) • whether or not it reduced the size of the plaques (1) • {(an effective) concentration / the half life} of the drug (1) • the (best) method to administer the drug (1) • how long to administer drug (for amyloid to be destroyed) (1) 	<p>ACCEPT named side effect e.g. allergic reaction</p> <p>ACCEPT {plaque / amyloid} disappeared better than existing drugs effective</p> <p>ACCEPT dose</p>	(3)

Question number	Answer	Additional guidance	Mark
6(b)(i)	<p>An explanation that includes the following points:</p> <ul style="list-style-type: none"> • antibodies can <u>only</u> bind to their antigen / this antibody can <u>only</u> bind to β amyloid (1) • because of the (complementary) shape of {antigen / antibody} (1) 	<p>ACCEPT FAB region / FAB receptor / receptor</p>	(2)

Question number	Answer	Additional guidance	Mark
6(b)(ii)	<p>An answer that includes the following points:</p> <ul style="list-style-type: none"> • {ATD / antibodies} will bind to the <u>amyloid</u> (1) • macrophages engulf the amyloid (1) • macrophages {destroy / digest} the amyloid with {enzymes / lysozymes} (1) 	<p>ACCEPT opsonisation</p> <p>ACCEPT phagocytes / neutrophils</p> <p>ACCEPT phagocytes / neutrophils protease</p> <p>DO NOT ACCEPT lysosome</p>	(3)

Question number	Answer	Additional guidance	Mark
6(c)(i)	<p>An answer that includes the following points:</p> <ul style="list-style-type: none"> • because their immune system had already been activated (against amyloid) (1) • and therefore {the amyloid was broken down / plaques could not form} (by phagocytes) (1) 	<p>ACCEPT a description e.g. a primary immune response had already taken place, the person had memory cells (to amyloid) antibodies present</p> <p>DO NOT ACCEPT by antibodies / B cells</p>	(2)

Question number	Answer	Additional guidance	Mark
6(c)(ii)	<p>An explanation that includes the following points:</p> <ul style="list-style-type: none"> because people with Alzheimer's disease will not have these memory cells (1) and therefore there will not be any memory cells that can differentiate into the plasma cells that produce the antibody (1) 	<p>ACCEPT B memory cells not effective</p> <p>ACCEPT no memory cells that will result in the production of antibody DO NOT ACCEPT no memory cells to produce the antibody</p>	(2)

Question number	Answer	Additional guidance	Mark
7(a)	<p>An explanation that includes the following points:</p> <ul style="list-style-type: none"> because MRSA has developed {antibiotic / methicillin} resistance (1) so we have had to find new drugs that this bacteria is not resistant to (1) 	<p>NB ACCEPT pathogens / bacteria throughout DO NOT ACCEPT immune for resistance throughout</p> <p>ACCEPT spreading / increasing</p> <p>ACCEPT that will destroy it</p>	(2)

Question number	Answer	Additional guidance	Mark
7(b)	<p>An explanation that includes the following points:</p> <ul style="list-style-type: none"> because skin flora {prevent the growth of / destroy / kill} {other bacteria / pathogens} (1) by competing for {space / nutrients} / producing toxins (1) 	<p>ACCEPT provide a barrier in protecting the body from infection</p> <p>ACCEPT produce lactic acid DO NOT ACCEPT sebum</p>	(2)

Question number	Answer	Additional guidance	Mark
7(c)	<p>An answer that includes two of the following points:</p> <ul style="list-style-type: none"> (if the bacteria are weaker) they will {not reproduce as fast / infect fewer cells} (1) therefore there will be fewer toxins produced (1) therefore an immune response will be more effective (1) 	<p>ACCEPT descriptions e.g. macrophages will be able to engulf more, more antibodies produced, more T killer cells activated</p>	(2)

Question number	Answer	Additional guidance	Mark
7(d)(i)	<p>An explanation that includes the following points:</p> <ul style="list-style-type: none">• so that the size of the infection with the solvent could be measured (1)• so that the effect of the drug itself can be determined (1)	<p>ACCEPT to show {the effect of Castaneroxy / that Castaneroxy is effective}</p>	(2)

Question number	Answer	Additional guidance	Mark
7(d)(ii)	<p>An answer that includes any two of the following points:</p> <ul style="list-style-type: none"> comment about effect of Castaneroxy on size during time period 0 and 6 days (1) comment made about Castaneroxy (compared to solvent) on size during time period {0 / 6} and 14 days (1) comment comparing the two concentrations of Castaneroxy (1) <p>AND</p> <ul style="list-style-type: none"> credit calculation to quantify reduction in size (1) 	<p>e.g. Castaneroxy does not prevent increase in size, the size does not increase as much as the solvent</p> <p>e.g. Castaneroxy reduces mean size</p> <p>e.g. Castaneroxy at high concentration decreases the size more than at lower concentrations, high concentrations clear up the infection completely but low concentrations do not</p>	(3)

Question number	Answer	Additional guidance	Mark
7(d)(iii)	<ul style="list-style-type: none"> mass of Castaneroxy A needed in 1 dm³ calculated (1) mass of leaves needed for 50 000 µg (1) converted into kg and rounded up to 3 (kg) (1) <p style="text-align: center;">OR</p> <ul style="list-style-type: none"> 50 µg converted into kg (1) mass needed in 1 litre (1) converted into kg and rounded up to 3 (kg) 	50 000 2 631 578 947 0.00000005 0.00005	(3)

Question number	Answer	Additional guidance	Mark
8(a)(i)	<ul style="list-style-type: none"> anthropogenic (climate change / activity / events) 		(1)

Question number	Answer	Additional guidance	Mark
8(a)(ii)	<p>An explanation that includes the following points:</p> <ul style="list-style-type: none">• because {there is no evidence that climate change has actually caused the forest fires / it is only a correlation} (1)• because certain {parties / politicians / business people} {have different opinions / want to continue their activities} (1)• forest fires are caused for other reasons / other (non-human) factors cause climate change (1)• lack of education (1)	<p>ACCEPT lack of trust in scientists</p> <p>ACCEPT named factor e.g. volcanic eruptions, solar flares</p>	(2)

Question number	Answer	Mark
*8(b)	<p>Local atmosphere:</p> <ul style="list-style-type: none"> • increase in CO₂ levels in the atmosphere • increase global warming • increase in soot / smoke • when the organic matter is burnt • soot prevents so much light penetrating • details of global warming • extent depends on {size / frequency} of fires • less CO₂ being removed from the atmosphere • as there are fewer trees to photosynthesise • CO₂ levels in atmosphere will begin to drop • as CO₂ diffuses away from the area • new plants will begin to grow • growing plants will be photosynthesising faster (than established plants) • therefore will be absorbing CO₂ from the atmosphere <p>Local biodiversity:</p> <ul style="list-style-type: none"> • biodiversity will decrease • because plants and animals are killed • because plant and animal homes will be destroyed • animals depend on plants • effect on food chains • fragmentation of habitat • fewer organisms of a species could affect gene pool • increase in inbreeding further decreasing biodiversity • plants will begin to sprout • seeds will germinate • (secondary) succession begins • increasing biodiversity • as biodiversity of plants increases so does the biodiversity of animals • eventually climax community re-established 	(6)

			Additional guidance
Level 0	0	No awardable content	
Level 1	1-2	Demonstrates isolated elements of biological knowledge and understanding to the given context with generalised comments made. Vague statements related to consequences are made with limited linkage to a range of scientific ideas, processes, techniques and procedures. The discussion will contain basic information with some attempt made to link knowledge and understanding to the given context.	Simple links made between the forest fires and the effects on biodiversity and atmosphere 1 mark = effect of forest fires on either biodiversity or atmosphere 2 marks = effect of forest fires on both biodiversity and atmosphere
Level 2	3-4	Demonstrates adequate knowledge and understanding by selecting and applying some relevant biological facts / concepts. Consequences are discussed which are occasionally supported through linkage to a range of scientific ideas, processes, techniques and procedures. The discussion shows some linkages and lines of scientific reasoning with some structure.	Extended links made the forest fires and the effects on biodiversity and atmosphere 3 marks = comments on both biodiversity and atmosphere with extended comment on one 4 marks = extended comments made on both biodiversity and atmosphere
Level 3	5-6	Demonstrates comprehensive knowledge and understanding by selecting and applying relevant biological facts / concepts. Consequences are discussed which supported throughout by sustained linkage to a range of scientific ideas, processes, techniques and procedures. The discussion shows a well-developed and sustained line of scientific reasoning which is clear and logically structured.	Clear discussions on the short-term and long-term effects of the forest fires on biodiversity and atmosphere 5 marks = plus clear discussion on the short-term and long-term effects of the forest fires on either biodiversity or atmosphere 6 marks = plus clear discussions on the short-term and long-term effects of the forest fires on both biodiversity and atmosphere

Question number	Answer	Additional guidance	Mark
8(c)	<p>An explanation that includes four of the following points:</p> <ul style="list-style-type: none"> choose different trees if original trees not suited to the new conditions (1) credit one change to consider (1) credit second change to consider (1) credit an explanation for one of the choices made (1) consideration of {needs of / needs for} animals (1) 	<p>ACCEPT keep same trees if they are suited to new conditions Choose trees that are adapted to the new conditions ACCEPT increased light intensity if linked to lack of tree cover decreases mineral ions if linked to leaching</p> <p>e.gs. fire resistant so less likely to be destroyed again higher productivity {so habitat replaced faster / <u>more</u> carbon dioxide removed from the atmosphere} (drought) so that they will not dehydrate (flooding) so that {ground will not be water-logged / trees do not get washed away (temperature) so that their enzymes will function</p>	(4)

Question number	Answer	Additional guidance	Mark
9(a)	<ul style="list-style-type: none"> mass of carbon in gt calculated in one year (1) 1.13×10^{13} (kg) (1) <p style="text-align: center;">OR</p> <ul style="list-style-type: none"> mass in gt converted into mass in kg (1) 1.13×10^{13} (kg) (1) 	<p>11.3 (gt per year)</p> <p>$113 \times 10^{12} / 1.13 \times 10^{14} / 11.3 \times 10^{13}$</p>	(2)

Question number	Answer	Additional guidance	Mark
9(b)	<p>A description that includes four of the following points:</p> <ul style="list-style-type: none"> GALP converted into glucose (1) glucose and fructose used to produce sucrose (in the leaves) (1) {sucrose / amino acids} moved (to the roots) in the phloem (1) {glucose / sucrose / amino acids} used to make {organic molecules / named organic molecule / named cell component} (in the roots) (1) credit details of how a named polymer is synthesised (1) 	<p>DO NOT ACCEPT glucose / protein</p> <p>DO NOT ACCEPT chlorophyll</p> <p>e.g. calcium ions used to make (calcium pectate / cell walls), condensation reaction to form starch</p>	(4)

Question number					Mark																								
9(c)	<table><tr><th rowspan="2">Molecule</th><th colspan="4">Inorganic ion</th></tr><tr><th>nitrate only</th><th>phosphate only</th><th>both nitrate and phosphate</th><th>neither nitrate nor phosphate</th></tr><tr><td>cellulose</td><td>[x]</td><td>[x]</td><td>[x]</td><td>[x]</td></tr><tr><td>nucleic acid</td><td>[x]</td><td>[x]</td><td>[x]</td><td>[x]</td></tr><tr><td>triglyceride</td><td>[x]</td><td>[x]</td><td>[x]</td><td>[x]</td></tr></table>	Molecule	Inorganic ion				nitrate only	phosphate only	both nitrate and phosphate	neither nitrate nor phosphate	cellulose	[x]	[x]	[x]	[x]	nucleic acid	[x]	[x]	[x]	[x]	triglyceride	[x]	[x]	[x]	[x]
