Thursday 4 June 2020														
Morning (Time: 1 hour 45 minutes)							Paper Reference WBI14/01							
Biology														
International Advanced Subsidiary / Advanced Level														
Unit 4: Energy, Environment, Microbiology and Immunity														
You must have: Scientific calculator, ruler, HB pencil												Total Marks		

Instructions

- Use **black** ink or **black** ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided
– *there may be more space than you need.*
- **Show all your working in calculations and include units where appropriate.**

Information

- The total mark for this paper is 90.
- The marks for **each** question are shown in brackets
– *use this as a guide as to how much time to spend on each question.*
- In questions marked with an **asterisk** (*), marks will be awarded for your ability to structure your answer logically, showing how the points that you make are related or follow on from each other where appropriate.

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

Turn over ►

1/1/1

Pearson

Answer ALL questions.

Write your answers in the spaces provided.

Some questions must be answered with a cross in a box ☒. If you change your mind about an answer, put a line through the box ☒ and then mark your new answer with a cross ☒.

- 1 Chloroplasts are involved in both the light-dependent reactions and light-independent reactions of photosynthesis.

(a) Which row of the table shows where the light-dependent reactions and light-independent reactions take place?

(1)

	Light-dependent reactions	Light-independent reactions
<input type="checkbox"/> A	stroma	stroma
<input type="checkbox"/> B	stroma	thylakoid membranes
<input type="checkbox"/> C	thylakoid membranes	stroma
<input type="checkbox"/> D	thylakoid membranes	thylakoid membranes

(b) The diagram shows the outline of a chloroplast.

Draw **three** labelled features on this diagram that are found in a chloroplast, other than the stroma and the thylakoid membranes.

(3)

DO NOT WRITE IN THIS AREA

- (c) An absorption spectrum shows how much light is absorbed by chloroplasts at different wavelengths of light.

The table shows the colour of light at four wavelengths.

Wavelength of light / nm	460	520	600	680
Colour of light	blue	green	yellow	red

Which wavelength of light is absorbed the **least** by chloroplasts?

(1)

- A** 460 nm
- B** 520 nm
- C** 600 nm
- D** 680 nm

- (d) State what is meant by the term **action spectrum**.

(1)

.....

.....

.....

- (e) Chloroplast pigments can be separated and then identified by their R_f values.

(i) Which process can be used to separate chloroplast pigments?

(1)

- A** chromatography
- B** dendrochronology
- C** osmosis
- D** PCR

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

(ii) The diagram shows separated chloroplast pigments, **J** and **K**.

What is the R_f value for chloroplast pigment **J**?

(1)

- A 0.625
- B 0.800
- C 0.830
- D 1.714

- 2 Body temperature and the degree of muscle contraction can be used to determine the time since death of a person.

The table shows how body temperature and body stiffness, due to muscle contraction, change with time since death.

Time since death / hours	Body temperature	Body stiffness
< 3	warm	not stiff
3 to 8	warm	stiff
8 to 36	cold	stiff
> 36	cold	not stiff

- (a) State how the temperature of a dead body should be measured.

(1)

.....

.....

.....

- (b) (i) Body temperature can be used to estimate the time since death using the following information:

- loss of 0.78°C per hour for the first 12 hours after death
- after 12 hours, loss of 0.4°C per hour.

Estimate the time since death of a person whose body temperature had fallen 11.5°C .

Give your answer to the nearest hour.

(2)

Answer hours

3 The following equation summarises photosynthesis.

The diagrams show the bonds in carbon dioxide, water and oxygen.

carbon dioxide

water

oxygen

Energy is needed to break chemical bonds, and to form new chemical bonds. This is called the bond energy.

The table shows some bond energies for the bonds in carbon dioxide, water, glucose and oxygen.

Type of bond	Bond energy / kJ per bond
C=O	785
O—H	462
O=O	487

(a) (i) In photolysis, one of the bonds in each water molecule is broken.

Using the equation for photosynthesis, calculate how much energy is released by photolysis in order for one molecule of glucose to be made.

(1)

Answer kJ

(ii) Explain how light energy is converted into chemical energy in the form of ATP.

(4)

(b) Tumour necrosis factor (TNF) is a protein that can be released by several types of cell. It plays an important part in the immune response.

This protein binds to specific receptors on the surface of cell membranes stimulating chemical reactions inside the cell. As a result, a number of responses may occur that include inflammation and the stimulation of phagocytosis by macrophages.

Antibodies to TNF are used to treat rheumatoid arthritis.

Scientists have used a virus that infects bacteria to produce antibodies to human TNF.

The diagram summarises this process.

(i) Explain how attaching the gene for TNF to the viral gene results in TNF being displayed on the outside of the capsid.

(2)

.....

.....

.....

.....

.....

.....

(ii) Explain why antibodies to TNF are used in the treatment of rheumatoid arthritis. (2)

.....

.....

.....

.....

.....

.....

(iii) Patients being treated with antibodies to TNF are more susceptible to tuberculosis (TB), which can be fatal.
Explain why patients being treated with antibodies to TNF can die from TB. (4)

5 Viruses can infect bacteria.

(a) Which virus can infect bacteria?

(1)

- A** Ebola virus
- B** human immunodeficiency virus (HIV)
- C** lambda phage (λ phage)
- D** tobacco mosaic virus (TMV)

(b) Some viruses that infect bacteria cause the production of molecules called holins.

Holins form protein channels in the cell membranes of bacteria. This allows polar molecules called lysins to reach the cell wall by facilitated diffusion.

The DNA of these viruses codes for lysins.

(i) Describe the role of channel proteins in the facilitated diffusion of lysins.

(2)

.....

The table shows some information about three types of nut: acorns, hazelnuts and walnuts.

Type of nut	Photograph	Description	Energy content / kJ per 100 g
acorn		1.0 to 3.0 cm long 0.8 to 2.0 cm wide	1619
hazelnut		1.5 to 2.5 cm long 1.0 to 1.5 cm wide hard covering	2788
walnut		3.0 to 5.0 cm long 2.0 to 4.0 cm wide hard shell	2822

(Source: © Science photo library, Source: © Jon Stokes/Science photo library,
Source: © Science photo library)

- (a) The volume of the smallest walnut is approximately 50 cm^3 .

Calculate the approximate volume of the largest hazelnut, using the formula

$$\text{volume} = \frac{4}{3} \pi l w^2$$

where $\pi = 3$, l = length of the hazelnut and w = width of the hazelnut.

(1)

Answer cm^3

(c) Suggest how ground squirrels evolved pouches.

(3)

Area with horizontal dotted lines for writing the answer.

8 Humans can have one of four different blood types: A, B, AB or O.

Blood type is determined by antigens present on the membranes of red blood cells.

The table shows which antigens are present in each blood type.

Blood type	Antigens on the membrane of red blood cells	Diagram of one red blood cell
A	antigen A only	
B	antigen B only	
AB	both antigens A and B	
O	neither antigen A nor B	

Blood transfusions are used in the treatment of some diseases.

A blood transfusion involves taking blood from a healthy person and putting it into the person needing the treatment.

(a) (i) Which blood type can be used for all blood transfusions?

(1)

- A blood type A
- B blood type B
- C blood type AB
- D blood type O

DO NOT WRITE IN THIS AREA

- 9 The photograph shows a moose.

(Source: © blickwinkel/Alamy Stock Photo)

Moose are large mammals that eat grass and the shoots of plants.

The number of moose is declining in parts of America.

- (a) The graph shows the number of moose in one part of America from 1994 to 2016.

- (i) In 2016, the moose were not counted. The value shown on the graph is an estimate. Describe how these data were used to estimate the number of moose in 2016.

(1)

(ii) Calculate the percentage decrease in the number of moose from 1994 to 2016.

(2)

Answer %

(iii) It has been suggested that global warming is responsible for the decrease in the number of moose from 1994 to 2016.

Sketch a graph to show this relationship.

(3)
