## edexcel "

Mark Scheme (Results)
January 2014

International Advanced Level Biology (WBIO2)

Unit 2: Development, Plants and the Environment

## Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications come from Pearson, the world's leading learning company. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information, please visit our website at www.edexcel.com.

Our website subject pages hold useful resources, support material and live feeds from our subject advisors giving you access to a portal of information. If you have any subject specific questions about this specification that require the help of a subject specialist, you may find our Ask The Expert email service helpful.

Pearson: helping people progress, everywhere
Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

## General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1 ( a )}$ | B; |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{1 ( b ) ( i )}$ | 1. mitochondrion has \{ double membrane / envelope \} and Golgi <br> apparatus has single membrane ; <br> 2. \{ cristae / stalked particles / ribosomes / matrix /(circular) DNA <br> \} inside mitochondrion and Golgi do not ; <br> 3. Golgi surrounded by (secretory) vesicles and mitochondria do <br> not; <br> 4. Golgi made of \{ cisternae / flattened sacs / eq \} and <br> mitochondria \{ rod-shaped / eq \}; | ACCEPT reference to <br> 'organelle P' instead of <br> Golgi apparatus, but not <br> if referring to rER |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :---: |
| $\mathbf{1 ( b ) ( i i )}$ | \{ these organelles / membrane bound organelles \} found only <br> in eukaryotic cells; | ACCEPT converse argument, <br> e.g. prokaryotic cells have <br> no membrane-bound <br> organelles |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :---: |
| $\mathbf{1 ( c )}$ | ribosomes / glycogen granule / starch granule / lipid droplets / <br> cytoskeleton /eq ; | DO NOT ACCEPT <br> reference to ribosomes <br> if linked to rER, ignore <br> reference to size of <br> ribosomes |  |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{2 ( a ) ( i )}$ | D ; |  |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| 2(a)(ii) | A; |  |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{2 ( a ) ( i i i )}$ | B; |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :---: |
| $\mathbf{2 ( b ) ( i )}$ | provide (a store of) energy / used in synthesis of other correctly <br> named molecules / eq ; | DO NOT ACCEPT 'food <br> store' |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| 2(b)(ii) | 1. (it is a) secretory vesicle / lysosome ; <br> 2. (cortical granules ) \{ move to / fuse with \} egg cell membrane / <br> eq ; <br> 3. \{ enzyme / chemical \} released / exocytosis; <br> 4. reference to the cortical reaction / change to zona pellucida ; <br> 5. idea of preventing polyspermy ; | 4. ACCEPT formation of <br> fertilisation membrane |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| 2(c) | 1. general description of feature of a nucleus, e.g. nuclear pores, <br> nucleolus, double membrane ; <br> 2. both \{ haploid / contain one set of chromosomes / contain 23 <br> chromosomes \} ; <br> 3. both produced by meiosis ; |  |  |
| (2) |  |  |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| 3(a)(i) | 1. (controls) growth of organism / replace (dead) cells / repair <br> damaged tissues; <br> 2. increase in cell numbers / production of new cells / eq ; <br> 3. asexual reproduction /production of \{ clones / genetically <br> identical cells \} / eq ; <br> 4. reference to synthesis of \{ new cytoplasm / new organelles / <br> DNA replication \} ; | NOT repair damaged cells |  |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| 3(a)(ii) | D S phase; |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :---: |
| 3(a)(iii) | mitosis; |  |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| 3(b) | 1. idea of correct stimulus e.g. chemical ; <br> 2. (stimulus) \{ activates some genes / inactivates genes \} / eq ; <br> 3. \{ transcription / mRNA produced \} at active genes / eq ; <br> 4. translation of mRNA produces \{ protein /polypeptide \}; <br> 5. idea that this protein either permanently modifies cell or <br> determines \{ cell structure / function \} ; | ACCEPT reference to genes <br> being switched on - ignore <br> references to genes being <br> switched off |  |
|  |  |  |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{3 ( c ) ( i )}$ | 1. idea that cells can divide ; <br> 2. these cells are \{ undifferentiated / unspecialised \} / these <br> cells can undergo \{ differentiation / specialisation \} ; <br> 3. idea that they give rise to \{ most cell types / all cell types <br> except extra-embryonic tissues \} ; | cell types, not tissues or <br> organs. |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :---: |
| 3(c)(ii) | 1. idea of pluripotent stem cells giving rise to tissues; <br> 2. idea of (organs) made up of \{ groups of / several / different \} <br> tissues; |  |  |

| Question <br> Number | Answer | Mark |
| :--- | :---: | :---: |
| $\mathbf{4 ( a ) ( i )}$ | B ; |  |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{4 ( a ) ( i i )}$ | $\mathrm{C} ;$ |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{4 ( b )}$ | 1. cellulose is a renewable \{ resource / eq \} / biofuel comes from a <br> renewable \{ resource / eq \} ; <br> 2. plants can be re-grown / eq ; <br> 3. fossil fuels are non-renewable resources / eq ; <br> 4. idea that fossil fuels will run out ; | IGNORE carbon neutral |  |

| Question Number | Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 4(c) | 1. xylem / sclerenchyma; <br> 2. (cell) walls contain cellulose ; <br> 3. idea of lignification of walls; | Mps 2 and 3 can still be given if incorrect tissue identified <br> ACCEPT phonetic spellings of sclerenchyma | (3) |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{5 *}^{*}$ (a) | (QwC - Take into account quality of written communication <br> when awarding the following points) <br> 1. idea of genetic variation in (moth) population; <br> 2. mutation as a source of genetic variation ; <br> 3. relevant selection pressure described, i.e. predation ; <br> 4. idea of selection \{ for the dark forms / against the light forms \} ; <br> 5. dark forms (survive to) breed / eq ; <br> 6. pass on \{beneficial allele(s) / eq\} to offspring / eq ; <br> 7. change in allele frequency over generations; <br> expression | ACCEPT reference to A for <br> light moths and B for dark <br> moth |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| 5(b) | 1. \{ little change / slight decrease / change of $7 \% /$ eq \} (of <br> melanic moths) from 1960 to 1970 ; <br> 2. idea of \{ rapid / steep / greater / $47 \% /$ /eq \} decrease (of <br> melanic moths) from 1980 to 1990 ; <br> 3. increase in proportion of light forms after $1980 /$ decrease in <br> darker forms (due to predation) / eq ; <br> 4. description of an appropriate change in the environment, e.g. <br> less pollution or less smoke ; |  |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| 5(c) | 1. more than one gene (for a characteristic) / eq ; <br> 2. on more than one locus; <br> 3. idea of continuous variation ; <br> 4. idea of cumulative effect of genes ; |  |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :---: |
| $\mathbf{6 ( a ) ( i )}$ | $(0.12 \times 244800 \div 10000) / 2.94 / 2.9 ;$ | 2.94 achieves only 1 mark <br> because there cannot be <br> fractions of a species |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :---: |
| $\mathbf{6 ( a ) ( i i )}$ | 1. greater (biodiversity) in California / 6 more species / eq ; <br> 2. correct manipulation of data e.g. 0.7 more species per $10000 \mathrm{~km}^{2}$ <br> or 44.3\% less in Texas ; |  |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{6 ( a ) ( \text { iii) }}$ | 1. number of species ; <br> 2. in a \{ particular area / region / eq \} ; | NOT variety of species <br> NOT habitat, environment or <br> community |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :---: |
| $\mathbf{6 ( b ) ( i )}$ | idea that species only found in one specific location (in the wild); | NOT habitat |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :---: |
| $\mathbf{6 ( b ) ( i i )}$ | 1. the \{ role / position / function / eq \} (of a species / <br> organism) ; <br> 2. within its \{ ecosystem / habitat / environment / eq \} ; <br> 3. idea of how organism or species \{ exploits resources /interacts <br> with its environment / eq \}; |  |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :---: |
| $\mathbf{6 ( b ) ( \text { iii } )}$ | 1. \{ brown / Hoplodactylus \} geckos live on the ground (and in <br> trees) and \{ green/Naultinus \} geckos live only in trees / eq ; <br> 2. idea of being \{ active / feeding \} at different times of the day ; <br> 3. reference to \{ different sources of food / not competing for food \} <br> ; <br> 4. idea of physical adaptations to survive e.g. camouflage ; | NOT intraspecific <br> competition |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{7 ( a )}$ | 1. description of sunlight as the environmental factor; <br> 2. an increase in MSH increases production of \{ melanosomes <br> /melanin \} eq ; <br> 3. phenotype described e.g. amount of melanin in skin or darkness <br> of skin ; |  |  |

| Question Number | Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 7(b)(i) | (QWC - Spelling of technical terms must be correct and the answer must be organised in a logical sequence) <br> 1. (tyrosinase) \{ enters /travels through / folded into 3-D shape / secondary or tertiary structure \} in rER ; <br> 2. idea of tyrosinase being packaged into (transport) vesicles by the rER ; <br> 3. vesicles \{ move to / transported to / fuse with / eq \} the Golgi apparatus / vesicles fuse to form the Golgi apparatus ; <br> 4. idea of enzyme \{ modified / activated \} in Golgi apparatus ; <br> 5. detail of modification e.g. addition of carbohydrate (chains) / glycosylation / glycoprotein formed; <br> 6. idea of enzyme being transferred in vesicles from the Golgi apparatus to the melanosome ; <br> 7. \{vesicles / lysosomes \} (containing tyrosinase) fuse with (membrane of) melanosome ; | QWC emphasis is on spelling of technical terms <br> ACCEPT RER <br> IGNORE secretory vesicles in this context - therefore not exocytosis or fusing with cell surface membrane |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :---: |
| $\mathbf{7 ( b ) ( i i )}$ | 1. (transport) vesicles from rER / (secretory) vesicles from Golgi <br> apparatus; <br> 2. (vesicles) fusing with cell (surface) membrane; <br> 3. reference to exocytosis ; |  |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :---: |
| $\mathbf{8 ( a ) ( i )}$ | 1. idea of covering plate (with a lid) / \{ oxygen / air \} allowed to <br> enter / anaerobic conditions prevented ; <br> 2. prevents \{ contamination / growth of anaerobic bacteria\} / eq <br> $;$ | IGNORE references to <br> sterilising the Petri dish |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :---: |
| $\mathbf{8 ( a ) ( i i )}$ | $1.25-30^{\circ} \mathrm{C}$; <br> 2. higher temperatures may encourage growth of bacteria that <br> are \{ pathogenic / harmful to humans \} / could denature the <br> enzymes /eq ; <br> 3. optimum temperature for \{growth of bacteria / enzyme <br> activity \}; | ACCEPT up to $40^{\circ} \mathrm{C}$ if <br> the context is enzyme <br> activity |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{8 ( b ) ( i )}$ | 1. reference to zone of inhibition / no bacteria present in clear <br> zones ; <br> 2. extract \{ prevents growth of bacteria / kills bacteria / eq \} ; <br> 3. extract diffused (into the agar) / eq ; <br> OR <br> 4. idea of assessing effectiveness of extracts ; <br> 5. reference to \{ measurement of zone /comparison of size of <br> zones \} ; <br> 6. idea of size of zone of inhibition indicating degree of inhibition <br> of bacterial growth; |  |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{8 ( b ) ( i i )}$ | 1. apple most effective against A / bacterial species A most <br> affected by apple /eq ; <br> 2. guava is most effective against B and C / bacterial species B <br> and C most affected by guava /eq ; <br> 3. orange more effective against A and C than pomegranate / <br> pomegranate more effective than orange against bacterial <br> species B ; <br> 4. bacterial species A least affected by guava /eq ; | ACCEPT reference to 'largest <br> clear zone' as implying most <br> effective |  |
| 5. bacterial species B least affected by apple /eq ; <br> 6. bacterial species C least affected by apple and pomegranate <br> /eq ; |  |  |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{8 ( c )}$ | 1. extracts made using fruit of the same \{ mass / age \} / <br> extracts have same concentration of fruit ; <br> 2. extracts made using same solvent / eq ; <br> 3. same volume of extract tested on the bacteria / same <br> diameter of wells in agar / same size paper discs ; <br> 4. idea of same (range of) species of bacteria used ; <br> 5. incubated at the same temperature and for the same length of <br> time / reference to a sensible temperature 25- $30^{\circ} \mathrm{C}$ and <br> appropriate time e.g. 24h to one week; <br> 6. zones of inhibition measured / eq ; <br> 7. replication qualified e.g. \{ repeats for each fruit extract / <br> repeat the experiment / repeats to calculate mean \} ; | ACCEPT $20-40{ }^{\circ} \mathrm{C}$ as this <br> could be used in <br> microbiology labs although <br> not in schools |  |
