| Question <br> Number | Answer | Mark |
| :--- | :--- | :--- |
| $\mathbf{1 ( a ) ( \mathbf { i } )}$ | The only correct answer is B - lipid and protein |  |
|  | A is incorrect because water does not contain carbon <br> $\mathbf{C}$ is incorrect because water does not contain carbon <br> $\mathbf{D}$ is incorrect because water does not contain carbon |  |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :--- |
| $\mathbf{1 ( a ) ( i i )}$ | The only correct answer is A - bacteria and fungi |  |
|  | B is incorrect because viruses are not decomposers <br> C is incorrect because maggots are not microorganisms <br> $\mathbf{D}$ is incorrect because viruses are not decomposers | (1) |

| Question Number | Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 1(b)(i) | 1. (high temperatures) \{ kill microorganisms / denature enzymes / changes shape of active site / eq \} ; <br> 2. therefore enzymes \{ will not be released / will be inactive / eq\} ; <br> 3. therefore bonds between \{organic molecules / eq\} will not be broken down / eq : | 1 DO NOT ACCEPT \{enzymes start to / microorganisms $\}$ denature <br> 2 ACCEPT substrate can no longer bind to active site <br> 3 ACCEPT named bonds and named organic molecules | (2) |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{1 ( b ) ( i i )}$ | 1. no oxygen (available for microorganisms) ; <br> 2. therefore no aerobic respiration ; | 1 IGNORE less oxygen <br> 2 ACCEPT (only) anaerobic <br> respiration <br> 3. therefore no energy for \{ chemical reactions / growth of <br> microorganisms \}/eq ; |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{1 ( b ) ( \text { iii } )}$ | 1. (vinegar) \{ is an acid / is acidic / has a low pH \} ; <br> 2. enzymes are denatured / active site has changed shape <br> / eq ; | 2. DO NOT ACCEPT \{enzymes start <br> to / microorganisms\} denature |  |
| 3. due to \{ionisation of the R groups / changes in bonding <br> within active site / eq\} ; | (2) |  |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :---: | :--- | :--- |
| $\mathbf{1 ( b ) ( i v )}$ | 1. idea that presence of salt draws water out of the <br> microorganisms; | 1. IGNORE out of food |  |
| 2. by osmosis (out of food or microorganism); | 2. I GNORE references to water <br> concentration <br> DO NOT ACCEPT incorrect <br> references to water potential etc | (2) |  |

| Question | Answer | Mark |
| :--- | :--- | :--- |
| Number | The only correct answer is C - oxygen |  |
| $\mathbf{2 ( a ) ( i )}$ | A is incorrect because GALP is produced in the light-independent reaction <br> B is incorrect because hydrogen ions form reduced NADP <br> D is incorrect because water is used not produced |  |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{2 ( a ) ( i i )}$ | The only correct answer is - D <br> Reduced NADP |  |
|  | A is incorrect because carbon dioxide does not come from the light-dependent reaction <br> B is incorrect because the NADP is reduced <br> C is incorrect because carbon dioxide does not come from the light-dependent reaction |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{2 ( b ) ( i )}$ | 1. ( $\mu \mathrm{mol})$ \{concentration / moles\} of named \{ substrate / <br> product \}; | 1. IGNORE amount <br> e.g. glucose, oxygen, GALP, GP, |  |
| $\mathrm{CO}_{2}$ |  |  |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{2 ( b ) ( i i )}$ | 1. as nitrates (from soil) ; <br> 2. taken up (by roots from soil) by active transport ; <br> 3. $\{$ transported / eq\} in the \{xylem / transpiration <br> stream\} ; | Penalise \{wrong form of <br> nitrogen / formula\} once <br> 1. ACCEPT ammonium (ions) | 2. IGNORE diffusion |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| 2(b)(iii) | 1. (nitrogen / nitrates) used to make \{chlorophyll / amino <br> acids\}; <br> 2. more chlorophyll results in more light absorption / eq ; <br> 3. amino acids used to make RUBISCO ; <br> 4. RUBISCO catalyses \{carbon fixation / eq\} ; | ACCEPT ribulose bisphosphate <br> carboxylase throughout | 4. ACCEPT description of carbon <br> fixation e.g.binding of carbon dioxide <br> to RuBP <br> 5. PI ECE TOGETHER <br> ACCEPT a description on <br> increased rate of photosynthesis |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{3 ( a ) ( i )}$ | mutation in bacteria (present in sharks) / (resistant) bacteria <br> taken up (from the water) / eating contaminated food / eq; ; |  | (1) |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :---: | :--- | :--- |
| $\mathbf{3 ( a ) ( \text { ii) }}$ | 1. idea that (resistant) bacteria can be consumed (in shark <br> meat); | 2. increasing the number of resistant bacteria in human <br> population / eq ; | 3. idea that \{ genes for resistance can be spread to other <br> bacteria / resistant bacteria will outcompete non- <br> resistant bacteria \} ; |
| 4. idea that these bacteria cause disease because they <br> cannot be treated (with antibiotics); | (2) |  |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{3 ( b )}$ | \{ sulfamethoxazole / bacteriostatic antibiotics \} prevent the <br> growth of bacteria and \{ gentamicin / bactericidal antibiotics \} <br> kill bacteria / eq ; | ACCEPT multiplying / reproducing - <br> equiv to growth <br> destroy - equiv to kill |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| 3(c)(i) | 1. mRNA will not \{bind / eq\} to ribosomes ; <br> 2. \{tRNA will not be able to bind / wrong tRNA will bind / <br> eq\} to codons (on mRNA) ; |  |  |
| 3. \{ wrong / no / eq \} amino acids will line up ; | 3. ACCEPT translation will not take <br> place / error in translation / incorrect <br> translation / eq | (2) |  |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :--- |
| $\mathbf{3 ( c ) ( i i )}$ | The only correct answer is C - peptide |  |
|  | A is incorrect because ester bonds form during lipid synthesis <br> B is incorrect because glycosidic bonds form during carbohydrate synthesis <br> D is incorrect because phosphodiester bonds do not form during translation | (1) |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :---: | :--- | :--- |
| 3(c)(iii) | 1. idea that \{human ribosomes are different from bacterial <br> ribosomes / antibiotics cannot bind to human ribosomes\}; ; | e.g. human cells have 80S and <br> bacteria have 70S ribosomes, <br> antibiotics bind to only 70S <br> ribosomes | 2. idea that enzymes in human cells are different from those <br> in bacteria ; |
| 3. idea that these antibiotics cannot enter human cells; <br> 4. idea that human cells have enzymes that can break down <br> these antibiotics ; |  | (2) |  |

| Question Number | Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 3(d) | 1. sulfamethoxazole has a similar structure to PABA / eq ; <br> 2. therefore binds to dihydropteroate synthetase / reacts with dihydropteroate diphosphate ; <br> 5. therefore no dihydropteroic acid made ; <br> 6. idea that there is no \{substrate / dihydropteroic acid\} to synthesise folic acid ; | ACCEPT description of similarity e.g. both have an $\mathrm{H}_{2} \mathrm{~N}$ group attached to a ring structure <br> 2 ACCEPT PABA cannot bind DO NOT ACCEPT dihydropteroic acid <br> 3. PABA and sulfamethoxazole join together (by condensation reaction / by a peptide bond); <br> 4. and this structure cannot \{bind to dihydropteroate synthetase / react with dihydropteroate diphosphate\} ; <br> 6. ACCEPT idea that a different molecule will be mad that cannot be converted to folic acid | (3) |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :--- |
| $\mathbf{3 ( e )}$ | The only correct answer is D - peptidoglycan |  |
|  | A is incorrect because amylopectin is in starch <br> B is incorrect because cellulose is present in plant cell walls <br> $\mathbf{C}$ is incorrect because glycogen is a storage molecule |  |

| Question Number | Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 4(a) | 1. (total number of squirrels) $=2500000+140000$ / 2640000 ; <br> 2. (percentage) $=5 / 5.3 / 5.303(\%)$; | 2 ACCEPT ecf for (140 $000 \times 100$ ) $\div$ $2500000=56$ (\%) <br> NB If no working is shown: <br> 5 / 5.3 / 5.303 (\%) scores 2 marks 56 (\%) scores 1 mark | (2) |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| 4(b) | 1. idea that areas occupied by red squirrels (in 1945) are <br> occupied by grey squirrels (in 2010) ; | IGNORE refs to numbers of <br> squirrels throughout |  |
| 2. idea that areas occupied by red squirrels (in 1945) are <br> occupied by both squirrels (in 2010); | 3. idea that areas occupied by both squirrels (in 1945) are <br> occupied by grey squirrels (in 2010) ; | ACCEPT (overall) an increase in <br> distribution of grey squirrels if no <br> other mark points awarded |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| 4(c)(i) | 1. competition for food ; <br> 2. competition for \{ space / habitat / shelter / territory / <br> eq \} ; | 1. ACCEPT description <br> IGNORE nutrients <br> 2. ACCEPT description <br> IGNORE niche, mates |  |
|  | 3. niches \{overlap / eq\} ; <br> 4. grey squirrels attack red squirrels / eq ; | 3. DO NOT ACCEPT same niche <br> 4. ACCEPT grey squirrels are <br> predators |  |
|  |  | (2) |  |

| Question Number | Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 4(c)(ii) | In the grey squirrels: <br> 1. antibodies $\{$ bind/eq $\}$ to virus; <br> 2. (antibodies binding to virus) will result in phagocytosis ; <br> 3. macrophages destroy virus with enzymes / eq ; <br> 4. (antibodies binding to virus) will \{inactivate virus / prevent the binding of virus to host cells / eq\} ; <br> In the red squirrels: <br> 5. idea immune system is weaker ; <br> 6. no plasma cells to produce antibodies ; <br> 7. idea that the virus will be able to \{infect / destroy / eq\} host cells ; | 2. ACCEPT opsonisation, agglutination, <br> 4. DO NOT ACCEPT antibodies \{kill / destroy\} virus <br> 6. DO NOT ACCEPT B cells |  |
|  | 8. no killer cells to destroy infected cells / eq |  | (4) |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| 5(b)(i) | 1. body temperature measured on discovery / eq ; <br> 2. body temperature decreases (with time after death) ; | 2. ACCEPT body loses heat |  |
| 3. (body temperature of dead animal) depends on <br> \{ambient temperature / position of body / wounds / <br> eq\} ; | 4. idea of \{working backwards to estimate time of death / <br> using a cooling curve for appropriate ambient <br> temperature\} ; | (3) |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 5(b)(ii) | 1. (state of ) rigor ; <br> 2. idea of looking at the degree of rigor ; <br> 3. idea that (ambient / body) temperature has to be taken into account ; <br> 4. idea that this method has time limitations ; OR <br> 5. (stage of) decomposition ; <br> 6. idea that decomposition occurs in a specific sequence ; <br> 7. idea that ambient temperature has to be taken into account ; <br> 8. credit details or what would be looked for ; OR <br> 9. (forensic) entomology / the study of insects ; <br> 10.idea that insects colonise the body in a specific sequence ; <br> 11.stage in life cycle depends on ambient temperature ; <br> 12.credit details of what would be looked for; | NB each set of mps can be credited anywhere in the answer <br> 1. ACCEPT rigor mortis / muscle <br> contraction <br> Degree of rigor mortis $=2$ marks <br> 4. e.g. changes in rigor occur in first few hours <br> 8. e.g. \{decomposers / insects\} arrive in specific sequence, body becomes bloated <br> 12. e.g description of life cycle, eggs collected and hatched for identification |  |

| Question Number | Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 6(a) | 1. (atherosclerosis results in) coronary artery being blocked / reduced blood flow in the coronary artery / eq ; <br> 2. heart \{cells / tissue / muscle\} die as a result of a lack of oxygen / eq ; <br> 3. resulting in lack of oxygen to the brain / eq ; | 2. ACCEPT conditions become anaerobic results in heart attack / infarction | (2) |
| Question Number | Answer | Additional Guidance | Mark |
| 6(b) | 1. idea that less air can enter \{lungs / alveoli / air sacs\} ; <br> 2. therefore the oxygen concentration gradient (between lungs and blood) is lower / eq ; <br> 3. therefore diffusion of oxygen into the blood is reduced/ eq; | 1. ACCEPT less oxygen | (2) |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :--- |
| $\mathbf{7 ( \mathbf { a } ) ( \mathbf { i } )}$ | The only correct answer is B - 3 |  |
|  | A is incorrect because statements 1, 2 and 4 relate to topography <br> C is incorrect because statements 1, 2 and 4 relate to topography <br> D is incorrect because statements 1, 2 and 4 relate to topography |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{7 ( a ) ( i i )}$ | endemic (species) ; | ACCEPT endemism |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{7 ( b ) ( i )}$ | $1.3210 \times 27 \div 100 ;$ | 1. ACCEPT $866.7 / 867$ <br> IGNORE 866 |  |
|  | 2. $0.6 / 0.58 / 0.577 ;$ | NB If no working has been shown, <br>  | $0.6 / 0.58 / 0.577=2$ marks <br> $866.7 / 867=1$ mark |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 7(b)(ii) | 1. use of a transect / measuring at (minimum 5) different altitudes ; <br> 2. from \{sea level / Om\} to above 2000 m ; <br> 3. systematic sampling (at points along transect) / eq; <br> 4. measuring the height (of the Binara) ; <br> 5. of as many (Binara) plants as possible ; <br> 6. idea that other areas would be looked at if no plants at 1 m in height are found ; | Descriptions of sowing seeds or planting small plants can score these mps <br> 1. ACCEPT long rope <br> 'sample at 0,500, 1000, 1500, 2000 and $2500 \mathrm{~m}^{\prime}=$ mark points 1 , 2 and 3 <br> 4. ACCEPT record height / count number that are 1 m high length for height | (5) |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 7(b)(iii) | 1. (soil) pH ; <br> 2. (soil) sample removed; <br> 3. credit use of $\{$ indicator solution / pH probe / pH meter \} ; <br> OR <br> 4. (soil) mineral ion content; <br> 5. (soil) sample removed; <br> 6. credit use of chemical testing kits ; <br> OR <br> 7. (soil) water / moisture ; <br> 8. (soil) sample removed; <br> 9. description of determining water content; <br> OR <br> 10.air spaces (in soil) ; <br> 11.(soil) sample removed ; <br> 12. description of measuring \{ drainage rate / volume with and without air \} : | ACCEPT inserting probe into soil for 2 marks <br> 4. ACCEPT salinity <br> 9. e.g. moisture \{probe / meter\}, weighing soil then drying and reweighing <br> ACCEPT inserting probe into soil for 2 marks |  |

|  | OR <br> 13. (soil) \{structure / type\} ; <br> 14. (soil) sample removed; <br> 15. description of measuring \{size of soil particles / extent of sand and clay / humus content / eq\} ; <br> OR <br> 16. (soil) temperature ; <br> 17. soil in situ measured / eq ; <br> 18. description of measuring temperature ; | 18. ACCEPT inserting \{temperature probe / thermometer\} into soil $=2$ marks | (3) |
| :---: | :---: | :---: | :---: |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :---: | :--- | :--- |
| $\mathbf{8 ( a )}$ | 1. GPP increases and then starts to \{level off / increase <br> more slowly / eq\} / eq ; | 1. ACCEPT GPP increases <br> (throughout) but at different rates |  |
|  | 2. R increases (throughout) / eq ; <br> 3. NPP increases and then decreases / eq ; <br> steadily | (3) ACCEPT linearly / |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{8 ( b ) ( i )}$ | 1. idea that tree is increasing in size so more \{ ATP / <br> energy \} is needed ; |  |  |
|  | 2. credit example of what energy is needed for ; | 2. e.g. active transport / chemical <br> reactions / mineral ion uptake / new <br> cells / cell division / metabolism <br> IGNORE growth | (2) |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{8 ( b ) ( i i )}$ | 1. idea that the number of leaves is increasing ; <br> 2. therefore greater surface area to absorb more light ; | 1. ACCEPT more / larger leaves <br> 2. ACCEPT more chlorophyll / <br> chloroplasts to absorb light |  |
|  | 3. more \{ATP / reduced NADP\} generated in the light- <br> dependent reaction / eq ; <br> photophosphorylation |  |  |
|  | 4. more GALP made in the light-independent reaction / eq ; | 4. ACCEPT Calvin cycle |  |
|  | 5. so more \{organic matter / protein / biomass / cellulose\} <br> synthesised from \{GALP / sugar / glucose\} / eq ; | 5. ACCEPT more energy converted <br> into \{biomass / organic matter\} |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{8 ( b ) ( \text { iii) }}$ | 1. NPP = GPP - R / eq ; <br> 2. GPP increase is \{steady / slow / eq\} but R is increasing <br> faster ; | 2. ACCEPT (with time) increase <br> in R is greater than increase in <br> 3PP |  |
|  | 4. idea that R (continues to) increases as the tree is larger ; <br> 4. idea that although there are more leaves GPP is not <br> increasing (very much) ; <br> 6. because the top leaves are shading the lower leaves ; |  | (4) |
