Biology A

Unit **H020/02**: Depth in biology

Advanced Subsidiary GCE

Mark Scheme for June 2017

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of candidates of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, Cambridge Nationals, Cambridge Technicals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support, which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by examiners. It does not indicate the details of the discussions which took place at an examiners' meeting before marking commenced.

All examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the report on the examination.

OCR will not enter into any discussion or correspondence in connection with this mark scheme.

Mark Scheme

June 2017

Annotations

Annotation	Meaning
DO NOT ALLOW	Answers that are not worthy of credit
IGNORE	Statements that are irrelevant
ALLOW	Answers that can be accepted
()	Words that are not essential to gain credit
—	Underlined words must be present in answer to score a mark
ECF	Error carried forward
AW	Alternative wording
ORA	Or reverse argument

Subject Specific Marking Instructions
INTRODUCTION

Your first task as an Examiner is to become thoroughly familiar with the material on which the examination depends. This material includes:

- the specification, especially the assessment objectives
- the question paper
- the mark scheme.

You should ensure that you have copies of these materials.

You should ensure also that you are familiar with the administrative procedures related to the marking process. These are set out in the OCR booklet

Instructions for Examiners. If you are examining for the first time, please read carefully **Appendix 5 Introduction to Script Marking: Notes for New Examiners.**

Please ask for help or guidance whenever you need it. Your first point of contact is your Team Leader.

Examples of the Level of Response answers are provided as an Appendix at the end of this mark scheme. Please familiarise yourself with them and use them as your guide when marking.

Level of Response Exemplars

Question 3(c) Explain how **alveoli** are adapted for efficient gas exchange.

e.g. 1
Level 2

9

(c)* Alveoli are located in the lungs of mammals.

Explain how **alveoli** are adapted for efficient gas exchange.

One way ~~are~~ alveoli are adapted for efficient gaseous exchange is that they have thin walls which means that there is a short diffusion distance for oxygen to diffuse out and CO₂ to diffuse in. Furthermore, Alveoli are also well ventilated with ~~oxygen~~ allowing for more effective ~~diffusion~~ gaseous exchange. In addition to that, Alveoli ~~are~~ ~~is~~ good blood supply as well which makes gas exchange ~~take part~~ quicker as there is enough blood for all of the oxygen to diffuse to. There are also lots of alveoli which increases exchange rate.

with mark for communication = 4 marks

brief notes seen – to be considered if points not made in main answer

D – adaptation and explanation

G – adaptation but no explanation

G – adaptation but no explanation

A – detail of adaptation

More than one category of adaptation identified
One adaptation has with additional detail.
One explanation given and we know which adaptation it refers to.
So only accesses L2 as we need more than one explanation L3.

L2

H020/02

Mark Scheme

June 2017

e.g. 2

Level 1 with mark for communication = 2 marks

Explain how alveoli are adapted for efficient gas exchange.

The alveoli have a moist surface and constant blood supply for gas exchange. They have a short diffusion pathway to ~~travel into~~ allow gases to diffuse into the blood stream. There is a constant diffusion gradient as O_2 and CO_2 diffuse in and out. They also have a constant oxygen supply for ~~diffuse~~ gas exchange to take place. Have a large surface area for maximum gas uptake.

A -
adaptation

[6]

L1

Explanations not clearly in the context of an adaptation. Adaptation stated but no extra detail. So only accesses L1.

e.g. 3

Level 2 with mark for

communication = 4 marks

D – detail of adaptation & explanation

A – adaptation

G – adaptation & explanation

Explain how **alveoli** are adapted for efficient gas exchange.

The walls of the alveoli are only one layer of flattened epithelial cells, so a short diffusion distance for oxygen and carbon dioxide to get to the blood is created. They also have a large surface area to volume ratio so there is a large area on which diffusion can occur, and a short diffusion distance is also created. The alveoli are highly vascularised so they have access to a ~~good~~ constant blood supply. This maintains the concentration gradient for diffusion and creates a short diffusion distance as the blood vessels are next to the alveoli. Due to these factors, the rate of diffusion of oxygen and carbon dioxide into and out of the alveoli is very fast, so gas exchange is efficient.

- ① thin walls ∴ short diff. dist.
- ② large SA:V ∴ large area for diff. and
- ③ highly vascularised ∴ maintains conc. gradient (good blood supply)

Three adaptations identified, one with extra detail. Explanation supplied for only one adaptation so science only gives it a L2.

e.g. 4

Level 3 with communication statement = 6 marks

(c)* Alveoli are located in the lungs of mammals.

Explain how **alveoli** are adapted for efficient gas exchange.

D – detail of adaptation & explanation

A – detail of adaptation

G – detail of adaptation & explanation

Alveoli are made up of squamous epithelium tissue. This tissue is very thin and means that the walls of ~~the~~ alveoli are only 1 cell thick. This greatly reduces the diffusion distance that oxygen and carbon dioxide have to pass through during gas exchange. Therefore, gas exchange can happen quickly. There are also ~~thousands~~ thousands of alveoli in our lungs, resulting in a large SA:V ratio. This also makes ^{the} diffusion ~~easy~~ of gases occur faster due to the space available for gas exchange to take place. Alveoli are surrounded by capillaries that are constantly bringing deoxygenated blood to the lungs to be oxygenated. This creates a constant ~~oxygen~~ oxygen ^[6] concentration gradient between the blood and the alveoli, causing the diffusion of oxygen to occur very quickly during gas exchange.

Three adaptations identified, two with extra detail. Explanation supplied for two adaptations. So can access L3.

L2

Question 4(c) A number of common factors affect the spread of communicable diseases in humans and some of them are relevant to the spread of Ebola.

From the information above, discuss these factors and suggest what actions could have been put in place to address them.

e.g. 1
Level 2 with

One factor is that there is sometimes poor understanding of the cause of the disease. This can be seen in the Ebola outbreak as initially there were not many trained professionals, so the illness was allowed to spread. This could have been prevented if health workers were sent out immediately. Another issue is that the illness is not contained. For example, Ebola victims would travel to stay with relatives, spreading the illness as they travelled and then to their relatives. Also, the residents who fled may have already caught the disease, so they took the disease to wherever they fled to. This could have been prevented by placing people in quarantine. [6]
Also, improper disposal of the victim's bodies was an issue. Burying the deceased straight away would have reduced the spread of Ebola

F1 – action

F5 – action

F6 – action

L2

communication mark = 4 marks

Three plausible actions identified.
No discussion expanding any of the factors in the bullet points.
So can access L2 only.

e.g. 2

Level 0 = 0 marks

A lack of hygiene (poor hygiene) increases ~~that~~ the likely hood of a spread of disease. Appropriate training ~~should~~ should be taken to deal with viral diseases and the training should be offered ~~so that~~ in many countries ~~proo~~ prone to disease. ~~im~~ living in close proximity makes ~~of~~ the disease spread from person to person a lot quicker, ~~so~~ houses should be build with enough proximity. Also untrained ^[6] individuals should not deal with the deceased body of person who had a disease as they can still catch the disease.

No plausible actions identified.
 No discussion expanding any of the factors in the bullet points.
 So cannot access L1.

X

e.g. 3

Level 3 with communication mark = 6 marks

A number of common factors affect the spread of communicable diseases in humans and some of them are relevant to the spread of Ebola. From the information above, discuss these factors and suggest what actions could have been put in place to address them.

F1 – discussion and action

- a severe lack of trained health workers, means that ill people cannot get the medicine & care they need to get better, and others at risk of catching it cannot be warned or vaccinated against it, so ~~the case~~ ^{the case} ~~is~~ ^{is} transmitted more. workers should have been sent to the area, as well as medicine & warning on the news & radio.
- the fact it is infected with bodily fluids means it can be transmitted through sex & ~~urine~~ ^{urine} ~~urine~~ ^{urine}, so people should be given condoms & advised to keep toilets as clean as possible.

F5 – discussion and action

4 - many residents lived in close proximity to (C) one another & people gathered ~~for~~ ^{to} pay respects to the deceased. This means transmissions of Ebola can occur more rapidly & affect more people as it is large gatherings of people close to one another. Therefore a ring vaccination should have been put in place, to ~~oh~~ give immunity to those at greater risk.

- People left their villages & ^{also} travelled to nearby places. This will spread the pathogen to other places & even nationally or internationally if planes are ~~border~~ ^{bordered}. Therefore quarantine the people, ~~pr~~ ^{pr} vaccinate, & if they don't show vaccination documentation they cannot leave the village or travel abroad.
