## GCE AS/A level

1071/01
BIOLOGY/HUMAN BIOLOGY - BY1
P.M. THURSDAY, 21 May 2015

1 hour 30 minutes

| For Examiner's use only |  |  |
| :---: | :---: | :---: |
| Question | Maximum <br> Mark | Mark <br> Awarded |
| 1. | 10 |  |
| 2. | 6 |  |
| 3. | 9 |  |
| 4. | 11 |  |
| 5. | 9 |  |
| 6. | 15 |  |
| 7. | 10 |  |
| Total | 70 |  |

## ADDITIONAL MATERIALS

In addition to this examination paper, you may need a calculator and a ruler.

## INSTRUCTIONS TO CANDIDATES

Use black ink or black ball-point pen. Do not use gel pen. Do not use correction fluid.
Write your name, centre number and candidate number in the spaces at the top of this page.
Answer all questions.
Write your answers in the spaces provided in this booklet. If you run out of space, use the continuation pages at the back of the booklet, taking care to number the question(s) correctly.

## INFORMATION FOR CANDIDATES

The number of marks is given in brackets at the end of each question or part-question.
You are reminded of the necessity for good English and orderly presentation in your answers.
The quality of written communication will affect the awarding of marks.

| The following diagrams repr |  |
| :---: | :---: |
| A |  |

## Answer all questions.

(a) Using letters A-G, complete the table below. You may use each letter once, more than once or not at all.

(a) \begin{tabular}{l}
Using letters A-G, complete the table below. You may use each letter once, <br>
once or not at all. <br>

$\qquad$| Statement | Letter(s) |
| :--- | :---: |
| is a monosaccharide |  |
| is a dipeptide |  |
| would be found in nucleic acids |  |
| contains C=C bonds |  |
| contains a glycosidic bond |  |
| is a triose sugar |  |

$.$

<br>
\hline
\end{tabular}

(b) (i) Describe a biochemical test for the presence of glucose in a solution.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
(ii) Explain why a positive result is seen with glucose but not for sucrose.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
2. The diagram below shows the DNA structure proposed by Watson and Crick in 1953.

(a) If the double helix takes 3.4 nm to make one complete turn and base pairs are 0.34 nm apart, how many base pairs would you expect to find in five complete turns? Show your working.
(b) Give a reason why the diagram shown above must be DNA rather than RNA.
$\qquad$
$\qquad$
$\qquad$
(c) The table below shows the bases guanine and cytosine as percentages of the total nucleotides present in three different micro-organisms.

| Micro- <br> organism | G | Case composition (\%) |
| :---: | :---: | :---: |
|  | 18.7 | 17.1 |
| yeast | 36.0 | 35.7 |
| bacteria | 42.0 | 13.9 |
| virus |  |  |

(i) Suggest which type of nucleic acid is present in the virus shown in the table. Explain your answer.
(ii) State the type of base to which cytosine belongs.

3. The diagram below shows part of the plasma membrane from an animal cell.

(a) Complete the table below to identify the structures A-D shown in the diagram.

| Structure | Name |
| :---: | :---: |
| A |  |
| B |  |
| C |  |
| D |  |

(b) Describe how structure $\mathbf{D}$ would transport a molecule against a concentration gradient.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
(c) In an experiment to determine the structure of the plasma membrane, scientists labelled the membrane proteins from two different cells using coloured dyes. One cell had its membrane proteins labelled with a red dye, whilst a second had its membrane proteins labelled with a green dye. The two cells were then fused to become a hybrid cell. This cell was viewed immediately after fusion and again after one hour. The results are shown below.

Immediately after fusion

One hour after fusion

Hybrid cell

KEY
Membrane proteins labelled with red dye

Membrane proteins labelled with green dye

4. The diagram below shows the relative lengths of the cell cycle in actively dividing cells taken from the root tip of a garlic plant.

(a) Describe the changes that occur to a plant cell during prophase.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
(b) The percentage of cells in each stage of the cell cycle is proportional to the length of that stage. Using a microscope, a student observed 100 cells and found 5 undergoing prophase. If the total length of the cell cycle is 24 hours, calculate the length of prophase in minutes. Show your working.
minutes

(c) | Vincristine is a chemical which inhibits mitosis by preventing the formation of the spindle |
| :--- |
| fibres. Garlic bulbs were grown in a solution of vincristine and the quantity of DNA present |
| in a cell from the root tip was measured over the 24 hour length of the cell cycle. The |
| results are shown below together with the results from garlic bulbs grown in water. |

| Quantity of |
| :--- |
| DNA per cell |
| /arbitrary units |

| Gsing yon grown in vincristine solution |
| :--- |
| that vincristine inhibits mitosis. | | Quantity of |
| :--- |
| DNA per cell |
| /arbitrary units |

[3]
(d) Meiosis produces four daughter cells, whereas mitosis only produces two daughter cells. Describe two other ways in which the cells produced by meiosis would differ from those produced by mitosis.
5. (a) Define the term water potential.
$\qquad$
$\qquad$
$\qquad$
$\qquad$

A student prepared a microscope slide containing a piece of red onion epidermis which had been soaked in a 0.4 M sucrose solution for 30 minutes. The slide was viewed under high-power and the following drawing was made.

Table to convert molarity to solute potential (kPa).

| Molarity of sucrose solution (M) | Solute potential kPa |
| :---: | :---: |
| 0.05 | -130 |
| 0.10 | -260 |
| 0.15 | -410 |
| 0.20 | -540 |
| 0.25 | -680 |
| 0.30 | -860 |
| 0.35 | -970 |
| 0.40 | -1120 |
| 0.45 | -1280 |
| 0.50 | -1450 |
| 0.55 | -1620 |
| 0.60 | -1800 |

 Using all the information provided, explain why.

 questions.
(i) Explain why the washing powder works best at $35^{\circ} \mathrm{C}$.
(iii) Suggest why three different enzymes are needed to remove blood, meat and egg stains. stains when using this washing powder.
(c) Many metabolic pathways are switched off by their end products which act as competitive inhibitors of the first enzyme in the pathway. In the example below, the end product isoleucine inhibits threonine deaminase.

7. Answer one of the following questions.

Any diagrams included must be fully annotated.
Either, (a) Explain how a biosensor may be used to measure blood glucose concentration. Outline the advantages of using a biosensor.

Or, (b) Describe and explain how a mitochondrion and a chloroplast are adapted to their functions. Explain how they are similar to a prokaryotic cell.
