M1.(a)   Both alleles are expressed / shown (in the phenotype).

 Accept: both alleles contribute (to the phenotype)

 Neutral: both alleles are dominant

1

(b)   Only possess one allele / Y chromosome does not carry allele / gene / can't be heterozygous.

 Accept: only possess one gene (for condition)

 Neutral: only 1 X chromosome (unqualified)

1

(c)   1. X^GX^B, X^BX^B, X^GY, X^BY;

 Accept: equivalent genotypes where the Y chromosome is shown as a dash e.g. X^G-, or is omitted e.g. X^G

 Reject: GB, BB, GY, BY as this contravenes the rubric

2.   Tortoiseshell female, black female, ginger male, black male;

3.   (Ratio) 1:1:1:1

 2 and 3. Award one mark for following phenotypes tortoiseshell, black, (black) ginger in any order <u>with</u> ratio of 1:2:1 in any order.

 *Allow one mark for answers in which mark points 1, 2 and 3 are not awarded but show parents with correct genotypes i.e. X^GX^B and X^BY **or gametes as** X^G, X^B and X^B, Y*

 3. Neutral: percentages and fractions

 3. Accept: equivalent ratios e.g. for 1:1:1:1 allow 0.25 : 0.25 : 0.25 : 0.25

3

(d)   (i)   Correct answer of 0.9 = 2 marks;

Incorrect answer but shows $q^2 = 0.81$ = one mark.

 Note: 0.9% = one mark

2

(ii)   Homozygous dominant increases and homozygous recessive decreases.

1

Page 2

M2.(a)   0.32.

> *Correct answer = 2 marks*
> *Accept 32% for 1 mark max*
> *Incorrect answer but identifying 2pq as heterozygous = 1 mark*

2

(b)   1.   Mutation produced *KDR minus* / resistance allele;
      2.   DDT use provides selection pressure;
      3.   Mosquitoes with *KDR minus* allele more likely (to survive) to reproduce;
      4.   Leading to increase in *KDR minus* allele in population.

4

(c)   1.   Neurones remain depolarised;
      2.   So no action potentials / no impulse transmission.

2

(d)   1.   (Mutation) changes shape of sodium ion channel (protein) / of receptor (protein);
      2.   DDT no longer complementary / no longer able to bind.

2

[10]

M3.(a)   (Recessive) allele is always expressed in females / females have one (recessive) allele / males need two recessive alleles / males need to be homozygous recessive / males could have dominant and recessive alleles / be heterozygous / carriers;

> *Accept: Y chromosome does not carry a dominant allele.*
> *Other answers must be in context of allele not chromosome or gene.*

1

(b)   (i)   1.   1, (2) and 5;

Page 3

2. 1 must possess / pass on the recessive <u>allele</u> / 1 must be a carrier / heterozygous / if slow (feather production) is recessive all offspring of (1 and 2) would be slow (feather production) / if rapid (feather production) was dominant 1 would have rapid (feather production);

    Reject: both parents must be carriers / possess the recessive allele.

    Reject: one of the parents (i.e. not specified) must be a carrier / heterozygous.

2

(ii) $5 = X^fY$ / X^fY^- / f / $f-$ / fY ;

$7 = X^FX^f$ **and** X^FX^F (either way round) /

or X^fX^F **and** X^FX^F (either way round) /

or X^FX^f, X^fX^F **and** X^FX^F (in any order);

Note: allow $5 = X^fY$, X^fY.

Accept: for both 5 and 7 a different letter than F. However, lower case and capital letter must correspond to that shown in the answer. For example accept $7 = X^RX^r$ and X^RX^R.

2

(iii) X^FX^f **and** X^fY **or** X^fX^F **and** X^fY

or X^FX^f **and** X^fY^- or X^fX^F **and** X^fY^- /

or Ff **and** fY /

or Ff **and** fY^- /

or Ff **and** $f-$ /

or Ff **and** f;

Accept: a different letter than F. However, lower case and capital letter must correspond to that shown in the answer.

Accept: each alternative either way round.

1

(c)   Correct answer of 32 (%) = 3 marks;;;

Page 4

Accept: 0.32 = 2 marks

If incorrect answer, allow following points

1. p^2 / q^2 = 4% / 0.04 / or p / q = 0.2;

2. Shows understanding that $2pq$ = heterozygotes / carriers;
   Accept: answer provided attempts to calculate 2pq. This can be shown mathematically i.e. 2 x two different numbers.

3

[9]

M4.(a) 1. Allows (valid) comparison;

2. Number / sample size may vary;

2

(b) 1. Increased chance of (severe malaria) with blood group A / decreased chance of (severe malaria) with sickle cell;
   Accept: converse for mild malaria i.e. increased chance of mild malaria with sickle cell / decreased chance of mild malaria with blood group A.
   Accept: if answer is comparative e.g. greatest risk of severe malaria with blood group A.

2. One mark for one of the following:

   almost equal chance with blood group O / slightly greater chance of mild malaria with O / slightly lower chance of severe malaria with O / 2.5 x / 2.48 x / more than twice the chance of severe with blood group A / (almost) 50% / half the chance of severe malaria with sickle cell / twice the chance of mild malaria with sickle cell;
   Neutral: answers which only refer to or use ratios.

2

(c) 1. Individuals with the **Hb^c** (allele) reproduce;

2. Pass on **Hb^c** (allele) which increases in frequency;

3. **Hb^A Hb^A** individuals less likely to survive / reproduce / frequency of **Hb^A** (allele) decreases;

3

[7]

Page 5

M5.1.   Use 1 in 400 to find frequency of homozygous recessive / q^2

   OR

   1 in 400 gives frequency of 0.0025;

> *Note - convention has recessive allele as q and dominant allele as p but allow reversal (since outcome is the same) as long as this is consistent throughout*

2.   Find square root of q^2 / find square root of 0.0025;

3.   Use of $p + q = 1.0$ / determine frequency of both alleles / both p and q / find p = 0.95 and q = 0.05;

4.   Use of $2pq$ to find carriers / heterozygotes;

> *The question requires a description but credit working where correct as alternative since this shows the stages*

[3]
