| Question <br> Number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{1 ( a )}$ | Idea that (a change in) <br> one variable (directly) <br> results in the change of <br> another variable ; | ALLOW causes, affects, etc <br> and clear examples <br> Eg increase in blood <br> cholesterol causes an <br> increase in the risk of CVD | IGNORE correlation, link, <br> relationship, trend, etc <br> alone |

| Question Number | Answer | Additional guidance | Mark |
| :---: | :---: | :---: | :---: |
| (b) (i) | 1. reference to peptide bonds (joining amino acids); <br> 2. between amino group (of one amino acid) and carboxyl group (of another) / eq ; <br> 3. the sequence of amino acids is the primary structure of the protein / eq ; <br> 4. reference to folding (of primary structure) held together by bonds / eq ; <br> 5. \{disulfide bridges / eq\} / \{hydrogen / $\mathrm{H}\}$ bond / ionic bonds / Van der Waals forces ; <br> 6. between the $R$ groups / eq ; | 2. AL W from a labelled diagram ALLOW NH2 and COOH <br> 4. AL W ref to alpha helix or beta pleated sheet | (4) |

| Question <br> Number | Answer | Additional guidance | Mark |
| :--- | :---: | :--- | :--- |
| $\mathbf{1 ~ ( b ) ( i i ) ~}$ | 1. HDL is smaller ; <br> 2. HDL contains <br> more protein / <br> eq ; | ALLOW converse for LDL |  |
| 3. HDL contains <br> less cholesterol / <br> eq ; |  | (2) |  |

| Question <br> Number | Answer | Additional guidance | Mark |
| :--- | :---: | :--- | :--- |
| $\mathbf{1 ( c ) ( i )}$ | 1. (risk due to) high <br> blood pressure has <br> fallen overall / eq ; | Answers should cover total <br> time period and not just <br> $1980-1990$ |  |
|  | 2. (risk due to) high <br> blood cholesterol <br> has fallen overall / <br> eq ; | (risk due to) obesity <br> has risen overall / <br> eq ; | 4. obesity was the <br> lowest risk factor <br> but is now the <br> highest / eq ; |
| 5. credit use of <br> manipulated figures <br> ; | 5. o y credit overall change <br> figures e.g. <br> $17 \%$ drop for high blood <br> pressure <br> $16 \%$ drop for high blood <br> cholesterol <br> $10.5 \%$ increase in obesity | (3) |  |

| Question <br> Number | Answer | Additional guidance | Mark |
| :--- | :---: | :--- | :--- |
| $\mathbf{1 ( c ) ( i i )}$ | 1. people more aware <br> of the risks / eq ; | 1. ALLOW more aware of <br> healthy diets |  |
|  | 2. people consuming foods <br> with lower \{cholesterol <br> levels / saturated fats / <br> eq\} / eq ; |  |  |
| 3. people consuming <br> foods with more <br> fibre in them / eq ; | 4. use of statins / eq ; <br> 5. more screening / eq <br> ; | 4. Use f sterols/named <br> example |  |

| Question <br> Number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{1 ( c ) ( \text { iii) }}$ | Any two from: <br> (being) male <br> increase in age <br> lack of exercise / inactivity <br> smoking <br> genetics <br> high alcohol consumption <br> high salt diet <br> high saturated fat intake <br> stress <br> diabetes ; | IGNORE fat, LDL or <br> cholesterol consumption | (1) |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :--- |
| 2(a)(i) | 1. no \{amino / amine / $\left.\mathrm{NH}_{2} / \mathrm{NH}_{3}{ }^{+}\right\}$group ; <br> 2. no \{carboxyl / carboxylic acid / $\left.\mathrm{COOH} / \mathrm{COO}^{-}\right\}$ <br> group ; |  |
| 3. no \{central / alpha\} carbon (atom) / eq ; <br> 4. no $\{\mathrm{R} /$ residual\} group(s) ; <br> 5. ring structures present (amino acids only have <br> them in some R groups) / eq ; | (2) |  |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :--- |
| $\mathbf{2 ( a ) ( i i )}$ | 1. idea that position of $\mathrm{CH}_{3}$ different ; <br> 2. idea that position of $\{\mathrm{H} / \mathrm{NH} / \mathrm{N}-\mathrm{H}\}$ different ; <br> 3. reference to being isomerically different ; | (2) |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :--- |
| $\mathbf{2 ( a ) ( i i i )}$ | 1. idea of specificity of \{active site/enzyme\} ; <br> 2. idea that the products are different \{shapes / <br> structures ; <br> 3. idea that P450 consists of (at least) three <br> \{enzymes / active sites\} ; <br> 4. idea that products could be interconverted ; | (3) |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :--- |
| 2(b) | Conclusion 1: <br> 1. idea that the first conclusion is \{valid for some <br> of the data / not valid (for all data) / <br> misleading /eq\} ; <br> 2. coffee and hot chocolate do have different <br> concentrations <br> OR only 4 drinks tested / concentration not <br> measured / volumes not controlled / eq ; <br> 3. idea that the second conclusion is not valid ; <br> 4. no indication of the volumes of tea and cola / <br> volume not controlled / impossible to calculate <br> concentration of caffeine in all four drinks <br> (using information given) / eq ; | (3) |

| Question Number | Answer | Mark |
| :---: | :---: | :---: |
| 3(a) | 1. amino acids ; <br> 2. peptide; <br> 3. condensation / polymerisation ; <br> 4. amino / amine / $\mathrm{NH}_{3}{ }^{+} / \mathrm{NH}_{2}$; <br> 5. carboxyl / carboxylic (acid) / $\mathrm{COO}^{-} / \mathrm{COOH}$; <br> [Accept answers for 4 and 5 the opposite way round] | (5) |

| Question Number | Answer | Mark |
| :---: | :---: | :---: |
| 3(b)(i) | ALLOW Mps in context of clearly labelled diagram <br> 1. globular / eq ; <br> 2. reference to active site ; <br> 3. reference to specific shape of active site ; <br> 4. reference to \{bonds /named bond / interaction / eq\} between R groups ; <br> 5. credit correctly named \{bond/interaction\} e.g. disulphide bond, hydrogen bonds, hydrophobic interactions (between R groups) ; | (3) |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :--- |
| $\mathbf{3 ( b ) ( i i )}$ | 1. (primary structure) \{position / sequence / <br> order /eq\} of the \{amino acids / R groups\} / <br> eq ; |  |
| 2. idea that this determines the \{positioning / <br> type\} of the \{bonds / folding / eq\}; | 3. determining the \{shape / properties\} of the <br> active site / eq ; | 4. idea of interaction of active sites and <br> substrates e.g. enzyme substrate complex <br> forms ; |
| 5. idea of \{polar / hydrophilic\} on the outside of <br> enzymes / \{non polar / hydrophobic\} on the <br> inside / eq ; | (3) |  |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :--- |
| 4(a)(i) | C; | (1) |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :--- |
| 4(a)(ii) | D; | (1) |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :--- |
| 4(a)(iii) | D ; | (1) |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :--- |
| 4(b)(i) | 1.humans more closely related to chimp (than <br> to orang utan and gorilla) / eq ; <br> 2. reference to humans and chimps more closely <br> related to orang utan than gorilla ; <br> 3. reference to similarity of sequence indicates <br> closeness of ancestral relationship / eq ; <br> 5. orang utan has one difference, gorilla has two and chimp sequence identical / eq ; <br> differences / eq ; <br> 6. reference to \{number 19 for orang utan / number <br> 9 and 19 for gorilla\} different ; | (4) |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :--- |
| 4(b)(ii) | 1. reference to similarity (of DNA) indicates <br> closeness of relationship ; |  |
| 2. because genes are sections of DNA / eq ; <br> 3. genes are the codes for protein / eq ; | (2) |  |

| Question Number | Answer | Mark |
| :---: | :---: | :---: |
| 4(b)(iii) | 1. reference to source of DNA sample, e.g. blood, saliva, semen ; <br> 2. reference to small samples of DNA can be amplified by PCR ; <br> 3. reference to use of (restriction / eq) enzymes to \{break / eq\} DNA ; <br> 4. reference to use of \{electro potential / potential difference / eq\}; <br> 5. reference to $\{t r e a t m e n t / s t a i n i n g / e q\} ;$ <br> 6. show up as $\{b a n d s / b a r s / e q\}$; <br> 7. reference to the \{number of bands / eq\} that match indicates similarity of the DNA ; | (3) |
