

1 Biological molecules are held together by a variety of bonds.

(a) The diagram in Fig. 1.1 represents an amino acid.

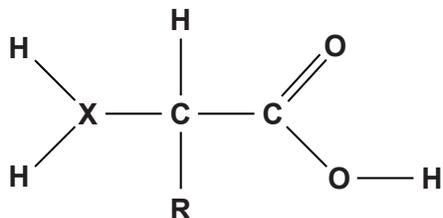

Fig. 1.1

(i) One of the atoms that make up an amino acid has been replaced with the letter **X**.

State the chemical symbol of the atom represented by the letter **X** in Fig. 1.1.

..... [1]

(ii) Name the polymer formed from a chain of amino acids.

..... [1]

(iii) Name the bond that is formed when two amino acids are joined together. Describe the formation of this bond.

name of bond .....

description of formation

.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....  
..... [3]

.....  
.....  
.....  
.....  
..... [9]

(ii) List **three other** examples of where hydrogen bonds are found in biological molecules.

- 1 .....
- 2 .....
- 3 ..... [3]

[Total: 17]

2 Cholesterol is an important biological molecule.

(a) State **two** roles of cholesterol in living organisms.

- 1 .....
- .....
- 2 .....
- ..... [2]

(b) Fig. 3.1 represents the structure of a cholesterol molecule.

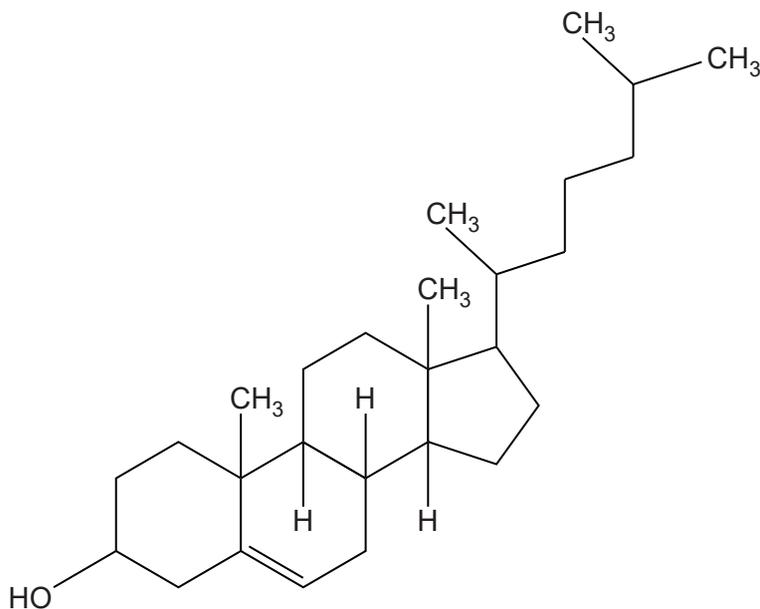

Fig. 3.1

(i) Identify **one** way in which the molecular structure of cholesterol is similar to the molecular structure of a carbohydrate.

..... [1]

(ii) Cholesterol is transported in the blood within molecules of low-density lipoprotein (LDL).

Name **two** molecules that combine with cholesterol to form LDLs.

.....

..... [2]

- (c) (i) In countries such as the UK, in which red meat forms a large part of the diet, people tend to have high levels of blood cholesterol compared with people in countries in which little red meat is eaten.

Suggest why diets with a high red meat content are associated with high blood cholesterol.

.....  
.....  
.....  
.....  
..... [2]

- (ii) Name a disease, other than atherosclerosis, for which high blood cholesterol is a risk factor.

..... [1]

**[Total: 15]**

3 A number of different biological molecules are represented in Fig. 3.1.

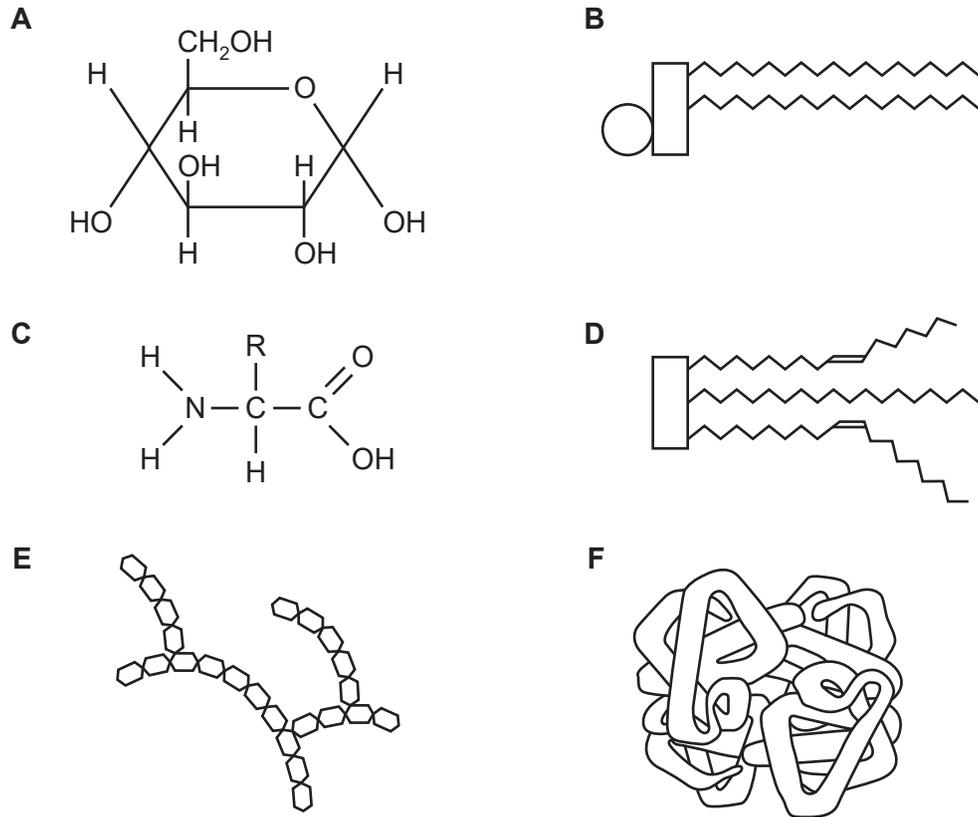

Fig. 3.1

(a) (i) State the letter of the molecule shown in Fig. 3.1 that represents:

a triglyceride .....

a monosaccharide .....

a protein .....

[3]

(ii) State the letter of the molecule shown in Fig. 3.1 that contains:

phosphate .....

glycosidic bonds .....

peptide bonds .....

disulfide bonds .....

[4]

(d) Cellulose is a carbohydrate molecule found in plants.

Complete the table below to give three **differences** in the **structures** of glycogen and cellulose.

One difference has been done for you.

| glycogen                   | cellulose               |
|----------------------------|-------------------------|
| <i>no hydrogen bonding</i> | <i>hydrogen bonding</i> |
|                            |                         |
|                            |                         |
|                            |                         |
