

ii. **Fig. 2.1** shows the circulatory system of the sea bass.

Fig. 2.1

Name the type of circulatory system shown in **Fig. 2.1**.

----- **[1]**

iii. The circulatory systems of the sea bass and mammals are described as closed circulatory systems.

Define the term **closed circulatory system**.

 ----- **[1]**

iv. State **two** differences between the closed circulatory system of the sea bass and the closed circulatory system of a mammal.

1

2

----- **[2]**

25. Outline the reasons why insects and other animals need well-developed transport systems.

[3]

26. A student was investigating the effect of cell size on the rate of diffusion into model cells. They had two cubes of agar containing phenolphthalein indicator as shown in Fig. 21.2.

Fig. 21.2

The student placed the cubes in beakers of dilute hydrochloric acid, which caused the indicator to become colourless. They then measured how much of each cube became colourless over time.

i. State **two** ways the student could have ensured they had confidence in their results.

1

2

[2]

- ii. In Fig. 21.2, Cube A is 10 mm along each side and Cube B is 4 mm along each side. Calculate the surface area to volume ratio (SA:V) for both cubes A and B.

Show your working. Give your answers to **one** decimal place.

Cube A _____
 Cube B _____ **[2]**

- iii. Explain why the surface area to volume ratio of an organism determines whether it needs a circulatory system.

 ----- **[3]**

27. Which of the cells below, represented by cubes **A** to **D**, has a surface area to volume ratio of 3 : 1?

Your answer

[1]

29(a). Fig. 5.1 shows the circulatory systems of three groups of animals.

Fig. 5.1

i. What type of circulatory system is shown in **all** these animals?

[1]

ii. How does the circulatory system of a fish compare to that of a mammal?

[1]

(b). Fig. 5.2 shows the flow of blood through the heart of an amphibian such as a frog.

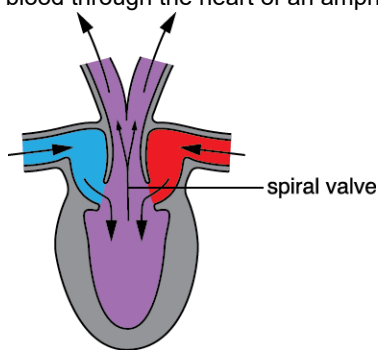

Fig. 5.2

Use the information in Fig. 5.1 **and** Fig. 5.2 to compare the circulations of a frog and a mammal and the relative effectiveness of each type of circulation.

31(a). Fig. 21.1 shows the cross sectional structure of a large artery and a large vein.

Fig. 21.1

Name the structure labelled **Z**.

..... [1]

(b). Use Fig. 21.1 to calculate the cross sectional area of the artery's lumen as a proportion of that of the vein. (Assume that the artery is circular and the vein is a square in cross-section). Show the steps in your calculation.

Answer..... [3]

(c). Outline how the difference in **lumen size** between arteries and veins is related to their function.

.....

 [3]

32(a). The formation of tissue fluid is an example of ultrafiltration. Osmosis plays an important part in ultrafiltration.

The water potential of the blood depends on the concentration of solutes such as glucose, amino acids and mineral ions as well as large plasma proteins.

- i. State the effect on the water potential of the blood if the concentration of glucose increases.

----- **[1]**

- ii. Explain why the oncotic pressure of the blood depends **only** on the concentration of large plasma proteins.

----- **[2]**

(b). The table below compares a capillary with the surrounding tissue fluid.

Property	Capillary	Tissue fluid
Oncotic pressure	4.2 kPa	0.03 kPa
Hydrostatic pressure	4.5 kPa	0.15 kPa
Concentration of the protein albumin	0.04 g cm ⁻³	0.02 g cm ⁻³

Net movement of fluid between the capillary and tissue fluid depends on the net driving force (J_v):

$$J_v = (P_c - P_i) - \sigma (\pi_c - \pi_i)$$

Where:

P_c = capillary hydrostatic pressure

P_i = tissue fluid hydrostatic pressure

π_c = capillary oncotic pressure

π_i = tissue fluid oncotic pressure

σ = reflectance factor

The reflectance factor is a measure of how permeable the capillary is to albumin. It varies between 0 (totally permeable) and 1 (totally impermeable).

Inflammation can reduce the value of the reflectance factor.

- ii. Dissolved ions diffuse between blood plasma and tissue fluid.

Pressure differences at the arterial and venous ends of capillaries are responsible for the formation of tissue fluid. The following measurements were made in one capillary:

- Net hydrostatic pressure at the arterial end was 4.6 KPa
- Net oncotic pressure was -3.0 KPa
- Net hydrostatic pressure at the venous end was 2.3 KPa.

Use this information to explain the movement of fluid in and out of a capillary.

[2]

36. Pressure varies in different parts of the mammalian circulatory system.

	Blood in aorta	Tissue fluid	Lymph	Blood in vena cava
Pressure				

Which of the following options, **A** to **D**, correctly completes the table above?

- A** high high low low
- B** high low high low
- C** high low low low
- D** high low low high

Your answer

[1]

37. A group of students were examining a mammalian heart prior to dissection. The atria and ventricles were clearly visible.

- i. Name **two** arteries that could be seen by the students.

1

2

[2]

38. Fig. 16.1 shows a drawing of a dissected human heart.

Fig. 16.1

i. Identify the structures labelled **A** to **E** on **Fig. 16.1**.

A

B

C

D

E

[5]

ii. State which subdivision of the peripheral nervous system supplies structure **A** on **Fig. 16.1**.

----- [1]

39(a). Valves control the flow of blood through the heart.

Complete the table below to show the roles of two valves in the heart.

Source of blood	Valve that controls blood flow	Destination of blood
.....	right semilunar valve
left atrium	left ventricle

[2]

40.

Fig. 2.2, below and on the Insert H020/02, Depth in biology, June 2018, shows photographs of sheep's hearts that were considered for use in a school dissection.

Fig. 2.2

- i. Looking at the two hearts in Fig. 2.2, a student decided that **Heart 2** was a better choice for the dissection because it had more structures present.

What evidence from the two hearts in Fig. 2.2 supports the student's decision?

----- [1]

- ii. Name the structure labelled **Z** on Fig. 2.2.

----- [1]

41. A school biology class carried out a dissection of a mammalian heart. A student drew the diagram shown in Fig. 3.1.

Fig. 3.1

i. Name the structures labelled **A**.

----- [1]

ii. Name the tissue labelled **B**.

----- [1]

iii. Table 3.1 lists some features of a mammalian heart.

One heart being examined in the lesson had both atria missing. The internal structure of this heart was examined by a pair of students.

Complete Table 3.1 to indicate which features were **visible to the naked eye** on the heart with **no atria**.

Feature	Visible (✓) or Not Visible (X)
AV valve	
bundle of His	
left ventricular wall	
Pulmonary vein	
Purkyne fibres	
SA node	
semi-lunar valve	
septum	

Table 3.1

[3]

42. Fig. 16 shows pressure changes during the cardiac cycle.

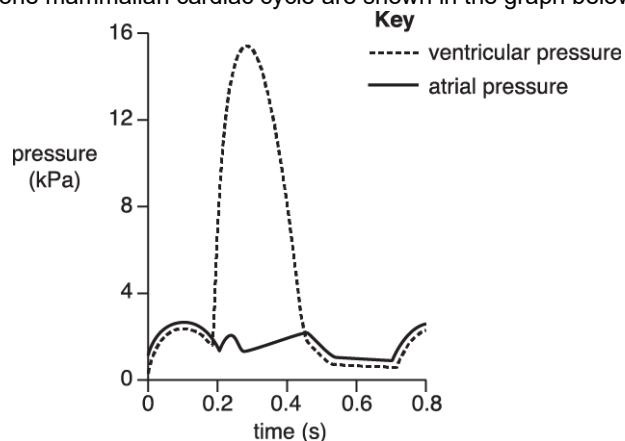

Fig. 16

44. The pressure changes in one mammalian cardiac cycle are shown in the graph below.

Which of the following time periods, **A** to **D**, shows ventricular systole?

- A. 0.0 to 0.1 s
- B. 0.2 to 0.3 s
- C. 0.4 to 0.5 s
- D. 0.6 to 0.8 s

Your answer

[1]

45. Fig. 3.2 shows the changes in pressure inside the heart during one cardiac cycle.

Fig. 3.2

i. Draw a line on Fig. 3.2 that shows the pressure changes in the **right ventricle**.

[2]

- ii. An individual's cardiac output is calculated using the following equation:

$$\text{Cardiac output} = \text{stroke volume} \times \text{heart rate}$$

The individual who produced ECG **Y** on Fig. 5.1 had a stroke volume of 80 cm^3 .

Calculate the cardiac output of the individual responsible for ECG **Y**.

Include appropriate units in your answer.

Answer [3]

- (b). Draw an ECG trace **on Fig. 5.1** (next to **Z**) to represent a recording from a patient with an ectopic heartbeat.

Show at least three cardiac cycles.

[2]

50. The electrical activity of the heart can be monitored using an electrocardiogram (ECG) trace.

Fig. 16.1 shows the ECG pattern for a single normal heartbeat.

Fig. 16.1

Fig. 16.2 shows an ECG trace for a person with normal heart rhythm and Fig. 16.3 shows the trace for a person with tachycardia.

Fig. 16.2

Fig. 16.3

- i. Calculate the percentage increase in heart rate for the person with tachycardia compared to the person with normal heart rhythm.

Use the data between points A and B on Fig. 16.2 and points C and D on Fig. 16.3 for your calculations.

Show your working. Give your answer to the nearest whole number.

Answer..... % [4]

- ii. The most obvious feature of tachycardia is an increased heart rate.

Using the information in Fig. 16.1, Fig. 16.2 and Fig. 16.3, what are **other** key features of tachycardia?

[2]

51. Pheochromocytoma is a rare tumour of adrenal gland tissue. It causes increased hormone release from the adrenal glands.

Fig 21.2 shows three ECG traces showing the heart rhythms of three different patients.

- Patient **X** has a normal heart rhythm.
- Patient **Y** has pheochromocytoma.
- Patient **Z** has bradycardia.

Fig. 21.2

- i. Identify patients **X**, **Y** and **Z** by labelling the traces in Fig. 21.2.

[2]

- ii. Sketch a trace for a patient who has entered atrial fibrillation.

[2]

iii. Suggest why reduced heart rate is sometimes seen in people who are very aerobically fit.

[2]

52. Fig. 3.3 shows two ECG traces.

- **Trace A** is a normal trace
- **Trace B** is from a patient that has been treated with the drug digoxin.

Fig. 3.3

i. Before being given digoxin, the patient's heart rate was 75 beats per minute.

Using **Trace B** in Fig. 3.3, calculate the percentage change in the patient's heart rate after receiving digoxin.

Answer% [3]

- ii. Explain why the answer calculated in part (i) may not be an accurate representation of the patient's heart rate **and** suggest how a more accurate answer could be obtained.

[3]

- iii. Digoxin caused the heart rate to change.
Identify **one other** effect of digoxin evident from Fig. 3.3.

[1]

53. Red blood cells contain high concentrations of the enzyme carbonic anhydrase.

- i. A scientist planned to investigate the effect of pH on the activity of carbonic anhydrase.

State **two** factors that the scientist would need to control during this investigation.

1 -----

2 -----

[2]

- ii. Human blood is maintained at a pH of 7.4 by reactions that occur in red blood cells.
Use your knowledge of these reactions to explain how a pH of 7.4 is maintained.

[3]

Fig. 4.2 shows dissociation curves for llama haemoglobin and camel haemoglobin.

Fig. 4.2

- i. State the partial pressure of oxygen that results in a saturation of 50% in llama haemoglobin.

Answer..... [1]

- ii. Explain why it is important for the survival of the llama that the llama haemoglobin dissociation curve is to the left of the camel haemoglobin dissociation curve.

 ----- [2]

55(a). In mammalian blood, oxygen is mainly transported combined with haemoglobin. The presence of haemoglobin greatly increases the oxygen carrying capacity of blood.

- 100 cm³ of plasma contains 0.3 cm³ of oxygen when fully saturated.
- 100 cm³ of blood contains 20.1 cm³ of oxygen when fully saturated.

Calculate the percentage increase in oxygen carried in fully saturated **blood** compared with oxygen carried in fully saturated **plasma**.

Show your working.

Answer = % [2]

(b). Oxygenated blood returns from the lungs to the heart before being pumped around the body.

i.

- Normal cardiac output is $5 \text{ dm}^3 \text{ min}^{-1}$.
- 100 cm^3 of blood contains 20.1 cm^3 of oxygen when fully saturated.

Calculate the volume (cm^3) of oxygen being transported to the tissues per minute.

Show your working and give your answer to **four significant figures**.

Answer = cm^3 [2]

ii. With reference to the structure of blood vessels, explain why oxygen is **not** released until the blood reaches the capillaries.

[2]

(c). The figure shows the oxygen dissociation curves at different carbon dioxide concentrations.

i. What name is given to a change in the oxygen dissociation curve due to increasing carbon dioxide concentration?

[1]

- ii. Letter **T** in the figure indicates the partial pressure of oxygen in actively respiring tissues.

Explain why the blood off-loads more oxygen to actively respiring tissues than to resting tissues.

[2]

56. Nitrogen fixation is an important part of the nitrogen cycle.

The rate of nitrogen fixation is reduced by the presence of oxygen.

Rhizobium uses the enzyme nitrogenase to fix atmospheric nitrogen.

Fig. 4 shows a simplified representation of the structure of nitrogenase and the reaction that it catalyses.

Fig. 4

- i. What can you conclude from Fig. 4 about the molecules or ions that affect the functioning of the nitrogenase enzyme?

[4]

- ii. Leghaemoglobin is a molecule that improves the performance of nitrogenase. It has very similar properties to mammalian haemoglobin.

Suggest **two** ways in which leghaemoglobin improves the performance of the nitrogenase enzyme.

[2]

57. Squid blood contains a blue oxygen-carrying protein called haemocyanin.

High partial pressures of carbon dioxide reduce the affinity for oxygen of haemocyanin.

Suggest a mechanism by which carbon dioxide could reduce the affinity for oxygen of haemocyanin.

[2]

58(a). Haemocyanin is an oxygen-binding pigment that is found in many invertebrate animals, including lobsters.

Fig. 6.2 shows the oxygen dissociation curves for haemoglobin and haemocyanin.

Fig. 6.2

What can you conclude about the habitat of a lobster?

----- [1]

(b). The oxygen dissociation curves for adult haemoglobin and fetal haemoglobin are shown in Fig. 6.1.

Fig. 6.1

- i. Outline why it is important that fetal haemoglobin has a higher oxygen affinity than adult haemoglobin.

[2]

- ii. Myoglobin is a protein found in muscles. Oxygen binds to myoglobin.

A student described the oxygen dissociation curve for myoglobin as follows:

- When oxygen first becomes available, myoglobin saturation increases at a constant rate of 8% per mmHg of oxygen.
- When there is a slightly higher partial pressure of oxygen, the rate of oxygen binding slows gradually until the myoglobin is 100% saturated.
- The partial pressure at which myoglobin reaches 100% saturation is the partial pressure at which adult haemoglobin is 80% saturated.

Sketch an oxygen dissociation curve for myoglobin **on Fig. 6.1** based on the description provided above.

Answer **on Fig. 6.1**

----- **[2]** -----
