# What is a cell?

# What is a cell?

The basic building block of a living organism.

# What is a tissue?

# What is a tissue?

A group of cells with a similar structure and function working together. For example, muscular tissue contracts to bring about movement.

# What is an organ?

# What is an organ?

A collection of tissues working together to perform a specific function. For example, the stomach contains glandular, muscular and epithelial tissues.

# What is an organ system?

# What is an organ system?

A group of organs working together to perform specific functions. For example, the digestive system contains organs such as the stomach, the small intestine and the large intestine.
