

## UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS International General Certificate of Secondary Education

CANDIDATE NAME					
CENTRE NUMBER			CANDIDATE NUMBER		

BIOLOGY

Paper 3 Extended May/June 2010

1 hour 15 minutes

0610/31

Candidates answer on the Question Paper.

No Additional Materials are required.

## **READ THESE INSTRUCTIONS FIRST**

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a pencil for any diagrams or graphs.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [ ] at the end of each question or part question.

For Examiner's Use

The retina contains light-sensitive cells known as rods and cones. The distribution of rods in the retina from point **X** to point **Y**, as shown on Fig. 1.1, was investigated.

For Examiner's Use

Fig. 1.2 shows the distribution of rods in the retina from point **X** to point **Y**.

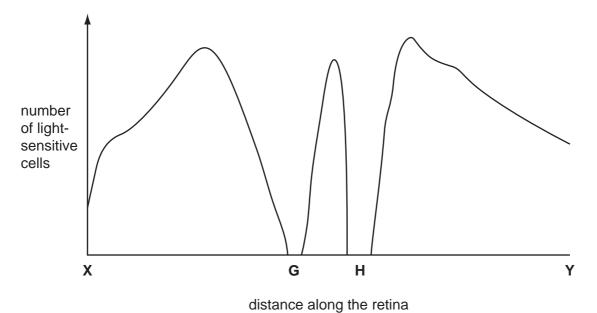

Fig. 1.2

(C)	(1)	G and H, as shown on Fig. 1.2, are parts of the retina.

Name G and H.

G

Н .....

(ii) Describe the function of the rods.

[2]

(iii) Draw a line on Fig. 1.2 to show the distribution of cones in the retina. [2]

.....

[Total: 14]

2 A student measured the uptake and release of carbon dioxide from a plant during 24 hours. It was a very bright, sunny day between sunrise and sunset.

For Examiner's Use

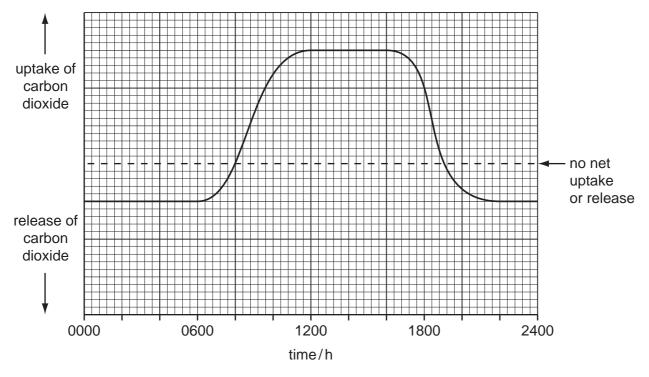

Fig. 2.1

(a)	(i)	Use the information in Fig. 2.1 to state the time that sunrise occurred.
		[1]
	(ii)	Using Fig. 2.1, state the times when there is no uptake or release of carbon dioxide.
		1.
		2. [1]
	(iii)	State why plants release carbon dioxide at night.
		[1]
	(iv)	Explain why it is important for plants that carbon dioxide uptake during the day is greater than carbon dioxide released at night.
		101

**Question 2 continues on Page 6** 

The yields of tomatoes grown in open fields in India are very low compared with yields of tomatoes grown in glasshouses in Europe.

For Examiner's Use

In a study, scientists in India grew tomato plants in glasshouses and in open fields nearby. The growth of the plants and the yields of tomatoes were recorded.

The results are shown in Table 2.1.

Table 2.1

	tomato plants grown in				
	glasshouses	open fields			
mean final height of tomato plants / cm	84.1	69.0			
mean number of leaves per tomato plant	123.0	82.0			
mean fresh mass of tomato plants / g	988.3	491.7			
mass of tomatoes per plant / g	2986.0	818.9			
mean fresh mass of tomatoes / g	95.0	84.4			

(b) (i) The mean fresh mass of tomatoes grown in glasshouses was greater than the mean fresh mass of tomatoes grown in open fields.

Calculate the difference in mean fresh mass as a percentage of the mean fresh mass of tomatoes grown in open fields.

Show your working.

Answer = \_\_\_\_\_ % [2]

	(ii)	Suggest how an increase in the height of the plants and the number of leaves on each plant affects the yield of tomatoes.	For Examiner's Use
		[3]	
(c)		e scientists made sure that the only differences between the two groups of plants re the result of the protection provided by the glasshouses.	
		ggest the factors that the scientists should have kept the same for the two groups of hts in this investigation.	
		[3]	
(d)		e growth and final yields of crops grown in open fields are often limited by ironmental factors.	
	Des yiel	scribe how these factors are controlled in commercial glasshouses to give high ds of crops such as tomatoes.

**3** Fig. 3.1 shows a human egg cell and a human sperm cell.

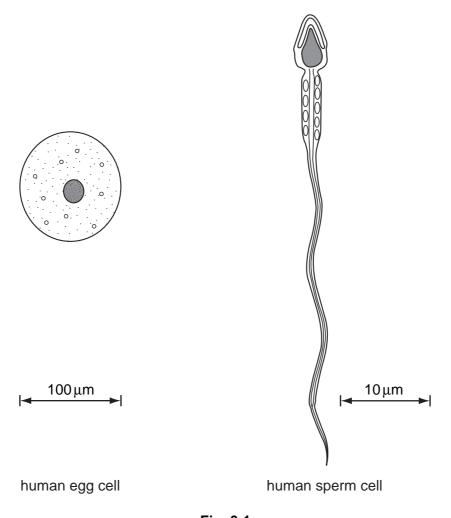

Fig. 3.1

(a) (i) What is the name given to the release of eggs from the ovary?

[1]

(ii) Sperm cells and egg cells are haploid. State the meaning of the term *haploid*.

[1]

(b)	Complete t	the table to	compare	egg (	cells	with	sperm	cells.
-----	------------	--------------	---------	-------	-------	------	-------	--------

feature	egg cells	sperm cells
site of production		
relative size		
numbers produced

					[4]
(c)	Thr	ee hormones that cor	trol the menstrual cycle a	re:	
	•	follicle stimulating ho luteinising hormone oestrogen.			
	(i)	Name the site of pro	duction and release of oes	strogen.	
	(ii)	Describe the role of	pestrogen in controlling the	e menstrual cycle.	[1]
					•••••
					[2]
(d)	Arti	ficial insemination is s	sometimes used as a treat	ment for female infertility.	
	Out	tline how artificial inse	mination is carried out in h	numans.	
					[2]

**4** Acid rain is a serious environmental problem in some areas of the world. Lakes in Canada, Norway and Scotland are highly acidic as a result of acid rain.

For Examiner's Use

Fig. 4.1 shows a cause of acid rain.

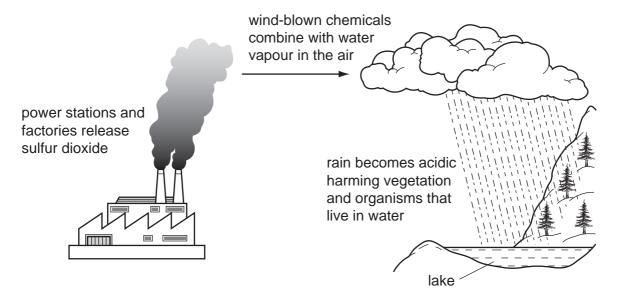

Fig. 4.1

(a)	(i)	State one cause of acid rain other than that shown in Fig. 4.1.	
			[1]
	(ii)	Describe two effects of acid rain on forest ecosystems.	
		1.	
		2.	
			[2]
(b)	Des	scribe two different ways to reduce pollution so that there is less acid rain.	
	1.		
	2.		
			[2]

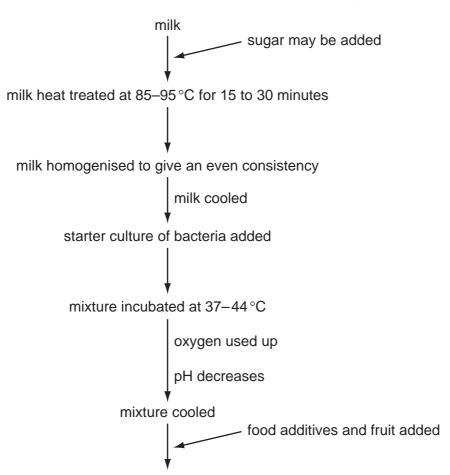

Fig. 4.2 shows the pH ranges that some animals that live in lakes can tolerate.

anir	рН								
group	examples	7.0	6.5	6.0	5.5	5.0	4.5	4.0	3.5
	trout								
fish	bass								
	perch								
	frogs								
amphibians	salamanders								
	clams								
molluscs	snails								
crustacean	crayfish								
. ,	mayfly larvae								
insects	blackfly larvae								

Fig. 4.2

(c)	Sta	te <b>one</b> feature of molluscs that is <b>not</b> a feature of crustaceans.	
			[1]
(d)	Usi	ng the information in Fig. 4.2,	
	(i)	name an animal that could be found in a lake with a pH of 4.0;	
			[1]
	(ii)	name the animals that are most sensitive to a decrease in pH;	
			[1]
	(iii)	suggest why some animals cannot tolerate living in water of pH as low as 4.0.	
			[2]
		[Total:	101

**5** Fig. 5.1 shows the processes involved in the manufacture of yoghurt.

yoghurt is packed and sent at  $4\,^{\circ}\text{C}$  to shops

Fig. 5.1

(1)	Explain why the milk must be cooled before the bacteria are added.	
		[2]
(ii)	Explain why the pH decreases only after the oxygen in the milk has been used up	).
		[2]
(iii)	Suggest <b>one</b> type of food additive that could be added to yoghurt.	
		[1]

© UCLES 2010 0610/31/M/J10

The starter culture contains two species of bacteria, *Streptococcus thermophilus* and *Lactobacillus bulgaricus*.

Fig. 5.2 shows the growth of these bacteria during the production of yoghurt.

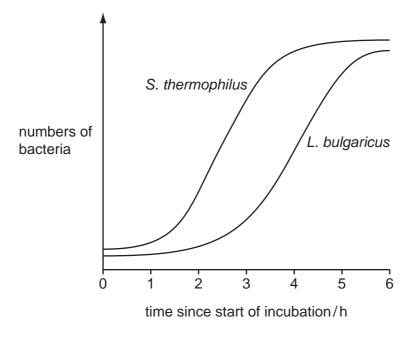

Fig. 5.2

(b)	Using your knowledge of population growth and the factors that affect it, describe <b>and</b> explain the growth of <i>S. thermophilus</i> , as shown in Fig. 5.2.
	[5]

(c)	Suggest why the numbers of <i>L. bulgaricus</i> do not start to increase until after the increase in the numbers of <i>S. thermophilus</i> .	Exa
	[2]

## **BLANK PAGE**

Question 6 begins on page 16.

0610/31/M/J10 **[Turn over** 

6 The Food and Agriculture Organization (FAO) collects data on food supplies worldwide.

The FAO classifies the causes of severe food shortages as either by natural disasters or as the result of human action.

Natural disasters are divided into those that occur suddenly and those that take a long time to develop. Human actions are divided into those that are caused by economic factors and those that are caused by wars and other conflicts.

Fig. 6.1 shows the changes in the number of severe food shortages between 1981 and 2007.

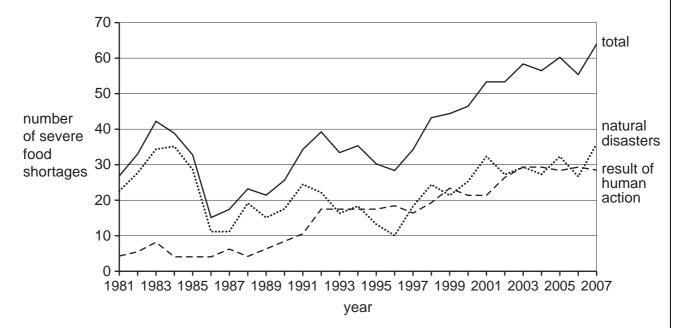

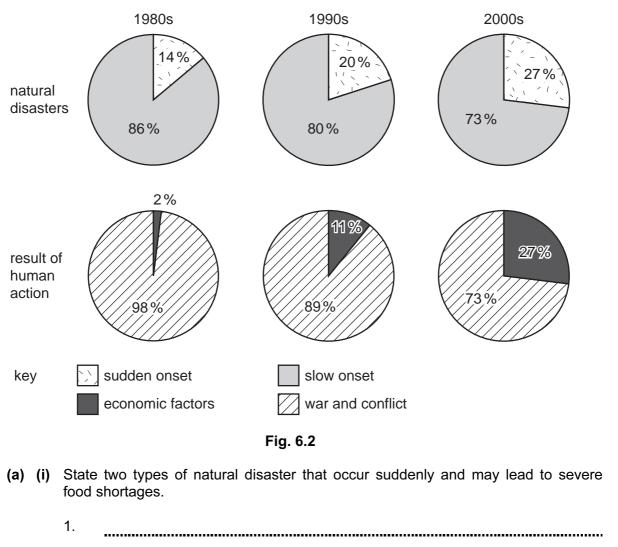

Fig. 6.1

© UCLES 2010 0610/31/M/J10

Fig. 6.2 shows the causes of severe food shortages in the 1980s, 1990s and 2000s.

[2] (ii) State **one** type of natural disaster that may take several years to develop. [1]

2.

(b)	Use the information in Fig. 6.1 and Fig. 6.2 to <b>describe</b> the changes in food shortages between 1981 and 2007.
	[5]
(c)	Explain how the increase in the human population may contribute to severe food shortages.
	[3]

The quality and quantity of food available worldwide has been improved by artificial selection (selective breeding) and genetic engineering.

For Examiner's Use

(d)	Use a <b>named</b> example to outline how artificial selection is used to improve the quantity or quality of food.
	[4]
(e)	Define the term genetic engineering.
	[1]
