International General Certificate of Secondary Education

## MARK SCHEME for the May/June 2014 series

## 0610 BIOLOGY

0610/33

Paper 33 (Extended), maximum raw mark 80

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the May/June 2014 series for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level components and some Ordinary Level components.

Page 2	Mark Scheme	Syllabus Paper		
	IGCSE – May/June 2014	0610	33	

		Answer	Marks	Guidance for Examiners
1	(a)	DNA / genome is the same / similar ; genes are same ; AVP ; e.g. ref to DNA bases / sequence, same / similar	[max 2]	
	(b) (i)	<ol> <li>mitosis ;</li> <li>no fertilisation ;</li> <li>budding off (of spores) / fragmentation ;</li> <li>vertical hyphae ;</li> <li>production of spores ;</li> <li>sporangium bursts / opens / releases ;</li> <li>ref to number of nuclei per spore ;</li> <li>method of spore dispersal i.e. air / water / wind ;</li> <li>AVP ; e.g. DNA replication</li> </ol>	[max 3]	
	(ii)	(named) favourable characteristics of parent passed on ; dense colonies outcompete other species ; rapid ; less, energy / resources used ; no gametes ; <i>idea of</i> only one parent required ;	[max 3]	
			[Total: 8]	

2	(a)	NO <sub>x</sub> / nitrogen dioxide / nitrous oxide / NO <sub>2</sub> / NO <sub>3</sub> ; carbon dioxide ;	[max 1]
	(b)	<ul> <li>kills / damages (named) plants ;</li> <li>(acidic) soil leaching AW ;</li> <li>released (named) metals ; e.g. aluminium</li> <li>nutrients in soil no longer available to plants ;</li> <li>prevents decomposition ;</li> <li>dissolves limestone / marble / sandstone AW ;</li> <li>acidification of lakes ;</li> <li>(fresh water) fish / invertebrates die ;</li> </ul>	[max 3]
	(c)	<ul> <li>scrubbers / flue gas desulfurisation, in power stations / chimneys / neutralise waste gases with lime;</li> <li>desulfurisation of coal / oil;</li> <li>use less fossil fuels;</li> <li>use low sulfur, fuel / petrol / diesel;</li> <li>use alternative / renewable / sustainable / green sources of energy;</li> <li>A gas-to-liquid (methane to petrol / diesel) catalytic converters / use electric cars;</li> <li>any one method to reduce demand for energy;</li> <li>idea of international treaty for reducing emissions;</li> </ul>	[max 3]
2	(d) (i)	sharp decrease in both, until 1997 ; more gradual decrease in both, since 1997 ; both follow same trend ; comparative use of data ;	[max 3]
	(ii)	fresh mass changes with water content ; dry mass is less variable / more consistent, for comparison ; dry mass is a measure of growth ; <i>idea that</i> percentage standardises changes in tissue concentratior for comparison ;	n [max 2]
			[Total: 12]

	IGCSE – May/June 2014	0610	33

3	(a)	(the ability to) detect / sense, changes in the environment / stimuli ; to respond / react (to those changes) ;	[2]	
	(b)	<ul> <li>(voluntary action) involves (brain in) decision making /conscious;</li> <li>(voluntary action) is slower;</li> <li>(voluntary action) not reflex / automatic;</li> <li>(voluntary action) can be learned;</li> <li>(voluntary action) can give different responses to same stimulus;</li> </ul>	[max 2]	
	(c)	sensory (neurone);	[1]	
	(d)	1st swimmer(s) slower (than rest) ; appropriate use of data, swimmer 1 v. 2 / 3 / 4 ; (mean) reaction times for swimmers 2 – 4 similar ; AVP ; swimmer 3 team 2 is an anomaly / outlier	[max 3]	
	(e)	<ul> <li>heart rate / pulse increase ;</li> <li>increase in breathing rate / depth ;</li> <li>heighten alertness / faster reaction time / AW ;</li> <li>vasodilation in muscle ;</li> <li>vasoconstriction in digestive system ;</li> <li>diverts blood to muscles / away from digestive system ;</li> <li>diverts blood to muscles / away from digestive system ;</li> <li>(leads to) glycogen to glucose (in liver) ;</li> <li>increased blood glucose (concentration) ;</li> <li>airways expand / increased ventilation ;</li> <li>more respiration for more energy for muscle contraction ;</li> <li>enables faster swimming / enhanced physical performance ;</li> </ul>	[max 3]	

Page 5	Mark Scheme	Syllabus	Paper	
	IGCSE – May/June 2014	0610	33	

4	(a)	(i)	pollen / male gamete ;	[1]	R gamete unqualified
		(ii)	chromosome number halved / becomes haploid ; genetic / DNA variation ; new combinations of alleles ;		
			fertilisation restores diploid number in zygote / ensures number of chromosome remains constant in next generation ;	[max 2]	
	(b)	(i)	pollen from anther to stigma ; between different plants of same species ;	[2]	
		(ii)	large petals ; pattern / guide lines on petals ;	[max 1]	
	(c)	(i)	temperature / warmth ; light ; water availability ; wind ; pollinator life-cycle timings ; CO <sub>2</sub> concentration ; pressure ;	[max 1]	
		(ii)	influence by genes and environment ; range of phenotypes / flowering times results ; (flowering time) is measurable ;	[max 2]	

		Page 6	Mark Scheme		Syllabus	Paper	
			IGCSE – May/June 2014		0610	33	
(d)	2 v 3 r 4 k 5 ( 6 c 7 c 8 r 9 c	pressures ; variation occurs (at f ef to mutation ; best adapted organi those that survive) competition for survice cross pollination ensi- pollination) ; eproductive isolation changes enhanced	sures more variation (than self- n (by different flowering times) ;	[max 5]	A Survive a Idea of bes	and reproduce t adapted	
				[Total:14]			
5 (a)	<b>F</b> – me	– cortex ; – medulla ; – ureter ;					
(b)	2 F 3 F 4 f 5 f	high blood pressure assists filtrate to pass through glomerulus / capsule ; proteins / blood cells, too big to move out of capsule / glomerulus ; filtrate / named example, small enough to move through ; filtrate consists of water and dissolved salts / ions / named ion / glucose / urea ;					
(c)	(ions/la using e	vement of (ions / large molecules) through the cell membrane ; ns/large molecules) against a concentration gradient ; ng energy (from respiration) ; e of protein / carrier in membranes ;			R along the	e concentration gradien	t
(d)	water salt(s)	; / ions / minerals / n	amed ion ;	[max 1]			

Page 7	Mark Scheme	Syllabus	Paper
	IGCSE – May/June 2014	0610	33

(e) (i)	Substance glucose salt urea toxins	Blood before dialysis normal high high high	Concentration in <b>used</b> dialysis fluid same high high high	Concentration in fresh dialysis fluid same ; low ; none ; low		[max 3]	
(ii)	<ul> <li>2 minerals</li> <li>3 from high concentration</li> <li>4 water, metain to low water</li> <li>5 (osmosis to low water</li> <li>6 proteins and proteins an</li></ul>	/ salts / ion acconcentra ation gradi oves by os is the mov ater potenti / blood cell s not remo	ent ; mosis ; vement of water) al across membr ls too large to mo	y diffusion ; entration / down a from high water p ane ; ve across memb (same concentra	otential ane ;	[max 4]	
(f)	fewer diet / fluid intake restrictions ; no need for regular visits to hospital ; less unwell / tired / nausea / headaches / less pain (after surgery) ; no needles / no fistula, permanently in arm ;			urgery);	[max 3]		
(g)	avoid rejectio stop immune		acking new kidne	эу;		[max 1]	
						[Total: 20]	

6 (a)					
, (a)		part of cycle	carbon compound found in each part		
	Р	atmosphere / air	carbon dioxide/CO <sub>2</sub> ; <b>R</b> carbon monoxide		
	Q	(named) plant(s) / flora / producers	glucose/ $C_6H_{12}O_6$ /starch/cellulose/any organic compound found in plants ; <b>R</b> glycogen		
	R	(named) animal(s) / fauna / consumers	glucose/maltose/glycogen/fats/fatty acid/glycerol/amino acid/protein/nucleic acid ; <b>R</b> starch		
	S	(named) decomposer(s) / saprophytes	glucose/glycogen/fats/fatty acid/glycerol/amino acid/protein/nucleic acid;		
	Т	fossil fuels, e.g. natural gas	Methane		
				[max 4]	
(b)	<ol> <li>CO<sub>2</sub> enters leaf;</li> <li>CO<sub>2</sub> diffuses to (cells);</li> <li>carbon dioxide and water / CO<sub>2</sub> + H<sub>2</sub>O;</li> <li>chlorophyll / chloroplasts, traps light energy;</li> <li>light energy is used to make glucose / carbohydrates;</li> <li>oxygen is present;</li> </ol>				
		$6\text{CO}_2 + 6\text{H}_2\text{O} \rightarrow \text{C}_6$		[max 5]	

		Page 9	Mark Scheme IGCSE – May/June 2014		Syllabus 0610	Paper 33	
(c)	1 2 3	<pre>factor:- light intensity or duration / carbon dioxide concentration / temperature ; effect of factor:- less photosynthesis, due to low light / low CO<sub>2</sub> / non optimum temperature ; explanation:- light provides energy/CO<sub>2</sub> substrate for photosynthesis/temperature effects enzyme activity ; ref to limiting (factor) ;</pre>		[max 3]			
(d)	<pre>carbon dioxide (enrichment) - burning / CO<sub>2</sub> gas cylinder ; light (intensity) - supplemental / artificial lighting / shading ; temperature - heating / cooling / ventilation / spray water ; water - irrigation / watering / hydroponics described ; pests / disease - (named) pesticides / biological control of pests ; minerals (named) - hydroponics / added to water supply / soil ; humidity - limiting ventilation / watering / humidifier or de- humidifier ; pollination -adding insect (named) pollinators ;</pre>				Mark is for	the mechanisms	of control in each case
				[Total: 15]
