# edexcel 

Mark Scheme (Results)
Summer 2014

Pearson Edexcel GCSE in Biology (5BI3H) Paper 01

## Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at www.edexcel.com or www.btec.co.uk. Alternatively, you can get in touch with us using the details on our contact us page at www.edexcel.com/contactus.

## Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

## General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- For questions worth more than one mark, the answer column shows how partial credit can be allocated. This has been done by the inclusion of part marks eg (1).
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.
- 

## Quality of Written Communication

Questions which involve the writing of continuous prose will expect candidates to:

- Write legibly, with accurate spelling, grammar and punctuation in order to make the meaning clear
- $\quad$ Select and use a form and style of writing appropriate to purpose and to complex subject matter
- Organise information clearly and coherently, using specialist vocabulary when appropriate.

| Question <br> Number | Answer | Acceptable answers | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{1 ( a ) ( i )}$ | $X X$ | ignore any superscript or <br> subscript letters/symbols <br> reject $X Y$ | (1) |

| Question Number | Answer | Acceptable answers | Mark |
| :---: | :---: | :---: | :---: |
| 1(a)(ii) | An explanation linking two of the following <br> they did not inherit the (haemophilia) allele (1) <br> (allele is) located on $X$ chromosome (1) <br> males receive X chromosome from their mother/Y chromosome from father (1) <br> $B$ is homozygous dominant/ neither $X$ chromosome from $B$ has the allele for haemophilia (1) | ignore gene throughout <br> accept have the dominant/normal allele <br> accept disorder is located on the X chromosome <br> ignore mother is unaffected accept mother neither affected nor a carrier <br> accept mother for B and father for A | (2) |

| Question Number | Answer | Acceptable answers | Mark |
| :---: | :---: | :---: | :---: |
| 1(b) | An explanation linking the following <br> aseptic conditions (1) <br> prevent growth of unwanted organisms/prevent contamination <br> (1) <br> OR <br> temperature / pH (1) <br> provide optimal conditions for growth /prevent enzymes denaturing (1) <br> OR <br> nutrient levels (1) <br> provide optimal conditions for growth (1) <br> OR <br> aeration/oxygen (1) <br> for aerobic respiration/ provide optimal conditions for growth / prevent anaerobic respiration (1) | ignore sterile <br> provide optimal conditions for enzymes/prevent microorganisms being killed | (2) |

(Total for question 1 = 8 marks)

| Question <br> Number | Answer | Acceptable answers | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{2 ( a ) ( i ) \mathbf { 1 }}$ | immune (1) |  |  |

| Question <br> Number | Answer | Acceptable answers | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{2 ( a ) ( i ) 2 ~}$ | memory lymphocytes (1) |  | (1) |

| Question <br> Number | Answer | Acceptable answers | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{2 ( a ) ( i i )}$ | B hybridomas |  |  |

| Question <br> Number | Answer | Acceptable answers | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{2 ( a ) ( i i i )}$ | Two of the following: <br> pregnancy testing (1) <br> locating the position of blood <br> clots (1) <br> locating the position of cancers <br> (1) | accept detecting cancer cells | (2) |

| Question Number | Answer | Acceptable answers | Mark |
| :---: | :---: | :---: | :---: |
| 2(b)(i) | A comparison including two from: <br> first response <br> - delay in production of antibodies (1) <br> - less antibodies produced (1) <br> - production of antibodies slower (1) | or a second response <br> - no delay in production of antibodies (1) <br> - more antibodies produced (1) <br> - production of antibodies faster (1) <br> accept comparisons of data <br> ignore references to decrease in antibody number | (2) |

| Question <br> Number | Answer | Acceptable answers | Mark |
| :--- | :--- | :--- | :--- |
| 2(b)(ii) | faster recovery / \{no/less\} <br> symptoms of infection / <br> increased chance of survival / <br> kills pathogen faster(1) | accept more memory <br> lymphocytes produced/ immune / <br> fights infection faster | (1) |

| Question <br> Number | Answer | Acceptable answers | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{2 ( b ) ( i i i )}$ | B Edward Jenner |  |  |

(Total for question $\mathbf{2}$ = 9 marks)

| Question <br> Number | Answer | Acceptable answers | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{3 ( a ) ( i )}$ | $8-10$ (hours) | accept any value between 8 and <br> 10 |  |

| Question <br> Number | Answer | Acceptable answers | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{3 ( a ) ( \text { ii) }}$ | $(85 / 100) \times 500(1)$ | award two marks for correct <br> bald answer |  |
|  | Or |  |  |
|  | 425 (plants) |  | (2) |

| Question <br> Number | Answer | Acceptable answers | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{3 ( a ) ( i i i )}$ | plant can flower all year <br> round/flowering not limited to <br> one period of the year/plant can <br> flower for longer/flower at any <br> time. | ignore references to growing |  |

| Question <br> Number | Answer | Acceptable answers | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{3 ( a ) ( i v ) ~}$ | C photoperiodism |  |  |

| Question <br> Number | Answer | Acceptable answers | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{3 ( b ) ( i )}$ | less likely to be eaten (by <br> animals / herbivores) | accept kills pests/reduces <br> damage done by pests <br> reject predators | (1) |

| Question <br> Number | Answer | Acceptable answers | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{3 ( b ) ( i i )}$ | An explanation linking two of the <br> following: <br> the bamboo mutated to produce <br> cyanide (1) <br> or <br> bamboo plants that produced <br> cyanide survived to reproduce/ <br> increase in numbers/increase in <br> size (1) <br> and <br> mutation in greater bamboo <br> lemur allowed them to tolerate <br> cyanide (1) | ignore bamboo plants not eaten <br> have the \{gene/ allele\} to <br> produce cyanide | accept lemurs have <br> \{gene/ allele\} to tolerate <br> cyanide <br> ignore \{adapted to <br> tolerate/resistant to\} cyanide |

| Question <br> Number | Answer | Acceptable answers | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{3 ( c ) ( i )}$ | A aggression |  | (1) |

| Question <br> Number | Answer | Acceptable answers | Mark |
| :--- | :--- | :--- | :--- |
| 3(c)(ii) | An explanation linking two of the <br> following: <br> sounds can be heard over a long <br> distance /heard in the dark (1) <br> do not need to have visual <br> contact/allows communication <br> with more animals (1) <br> or <br> more different types of sound (1) <br> more \{emotions/ behaviour/ <br> information\} can be conveyed <br> (1) | accept quicker communication doesn't require good <br> vision |  |

(Total for question 3 = 11 marks)

| Question <br> Number | Answer | Acceptable answers | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{4 ( a ) ( \mathbf { i } )}$ | B Homo erectus |  | (1) |

| Question <br> Number | Answer | Acceptable answers | Mark |
| :--- | :--- | :--- | :--- |
| 4(a)(ii) | any value between <br> $0.7-0.9$ million (years) | any value between $700000-$ <br> 900000 (years) | (1) |

| Question <br> Number | Answer | Acceptable answers | Mark |
| :--- | :--- | :--- | :--- |
| 4(b) | A description including two of the <br> following <br> structural features/ shape of fossil <br> (1) <br> (age of the fossil from) location <br> in rock layers (1) <br> structure of stone tools (1) | accept comparison to other <br> fossils | radioactive dating (of rocks) <br> ignore references to carbon <br> dating <br> ignore references to DNA <br> analysis <br> ignore brain size |

| Question <br> Number | Answer | Acceptable answers | Mark |
| :--- | :--- | :--- | :--- |
| 4(c) | A comparison including three of <br> the following <br> more abundant than nuclear DNA <br> (1) <br> higher mutation rates (1) <br> less likely to degrade (1) | accept \{large supply/lots\} of <br> mitochondrial DNA | only inherited down the female <br> line/no crossing <br> over/recombination <br> (1) |

| Question <br> Number | Answer | Acceptable answers | Mark |
| :--- | :--- | :--- | :--- |
| 4(d) | An explanation linking the <br> following: <br> habituation / learned response <br> (1) | stop responding to \{neutral <br> signal /harmless signal\} (1) <br> harmless stimulus <br> ignore references to getting used <br> to the sound of the waterfall | (2) |

(Total for question 4 = 9 marks)

| Question <br> Number | Answer | Acceptable answers | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{5 ( b ) ( i )}$ | A corpus luteum |  | (1) |

| Question <br> Number | Answer | Acceptable answers | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{5 ( b ) ( i i )}$ | uterus lining remains <br> thick/uterus lining <br> continues to grow (1) |  | (1) |

| Question Number |  | Indicative Content | Mark |
| :---: | :---: | :---: | :---: |
| QWC | $\begin{aligned} & \text { 5(b) } \\ & \text { (iii) } \end{aligned}$ | A explanation to include some of the following points <br> Stages and hormones <br> - menstrual cycle consists of menstruation, uterus lining thickening and ovulation <br> - hormones involved in the menstrual cycle are oestrogen, progesterone, FSH and LH <br> Role of the hormones <br> - FSH stimulates the follicles to mature <br> - FSH stimulates the production of oestrogen <br> - follicles secrete oestrogen <br> - oestrogen is responsible for the repair of the uterus wall <br> - high levels of oestrogen stimulate the release of LH <br> - LH triggers ovulation <br> - corpus luteum produces progesterone <br> - progesterone maintains the lining of the uterus <br> Control mechanisms <br> - oestrogen inhibits the production of FSH <br> - progesterone inhibits the production of LH <br> - progesterone inhibits the production of FSH <br> - menstruation is triggered by low levels of oestrogen and progesterone <br> - Low progesterone levels cause FSH to be released | (6) |
| $\begin{array}{\|l\|} \hline \text { Leve } \\ \text { I } \\ \hline \end{array}$ | 0 | No rewardable content |  |
| 1 | 1-2 | - A limited explanation of the menstrual cycle which might least one of the stages or some of the hormones involved role of one of the hormones involved <br> - the answer communicates ideas using simple language and limited scientific terminology <br> - spelling, punctuation and grammar are used with limited | ude at the ses <br> racy |
| 2 | 3-4 | - A simple explanation of the menstrual cycle including som stages and the role of at least two of the hormones invol <br> - the answer communicates ideas showing some evidence and organisation and uses scientific terminology appropria <br> - spelling, punctuation and grammar are used with some accu | the <br> arity <br> acy |
| 3 | 5-6 | - A detailed explanation of the menstrual cycle including most hormones involved, their roles and at least one control m <br> - the answer communicates ideas clearly and coherently us of scientific terminology accurately <br> - spelling, punctuation and grammar are used with few erro | of the anism range |

| Question <br> Number | Answer | Acceptable answers | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{6 ( a ) ( \mathbf { i } )}$ | ligase | accept reasonable misspellings <br> e.g. Iygase <br> reject lipase |  |

| Question <br> Number | Answer | Acceptable answers | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{6 ( a ) ( i i )}$ | Two from the following <br> - leaves single stranded <br> ends /overhangs / sticky <br> ends (1) | - complementary / bases <br> pair up (1) | accept (single stranded DNA) <br> matches up |
| hold gene in place while <br> ligase joins the DNA / <br> makes inserting gene into <br> plasmid more successful <br> (1) | ignore join together easily | (2) |  |

| Question Number |  | Indicative Content | Mark |
| :---: | :---: | :---: | :---: |
| QWC | *6(b) | A description to include some of the following points <br> Sweets <br> - made using invertase/sucrase <br> - converts sucrose into glucose and fructose <br> - reduces viscosity of sugar mixture <br> - increases simple sugar content, increasing sweetness <br> - production of soft centred sweets <br> - production of lower calorie sweets <br> Vegetarian Cheese <br> - made using chymosin <br> - produced by genetically modified organisms <br> - Chymosin initiates clotting/protein coagulation <br> - reduces the use of rennet extracted from animals <br> Lactose free milk <br> - made using lactase <br> - using immobilised enzymes <br> - lactose converted to galactose and glucose <br> - beneficial to people with lactose intolerance | (6) |
| Level | 0 | No rewardable content |  |
| 1 | 1-2 | - a limited description of the use of enzymes in the pro least one food or naming an enzyme linked to its use <br> - the answer communicates ideas using simple languag limited scientific terminology <br> - spelling, punctuation and grammar are used with limit | of at uses <br> curacy |
| 2 | 3-4 | - a simple description of at least two food products link named enzyme or a detailed description of the produ food including the name and role of the enzyme <br> - the answer communicates ideas showing some evidence and organisation and uses scientific terminology appr <br> - spelling, punctuation and grammar are used with some | heir f one <br> clarity ly uracy |
| 3 | 5-6 | - a detailed description of most stages of the productio more food products made using enzyme technology i name and role of the enzymes <br> - the answer communicates ideas clearly and coherently range of scientific terminology accurately <br> - spelling, punctuation and grammar are used with few | g the <br> a |

| Question <br> Number | Answer | Acceptable answers | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{6 ( c )}$ | A description including two from <br> the following <br> digestive enzymes/named <br> digestive enzyme (1) <br> breakdown named biological <br> stain (1) <br> stains into soluble products (1) |  |  |

(Total for question 6 = 11 marks)
