

Mark Scheme (Results)

Summer 2024

Pearson Edexcel GCSE In Biology (1BI0) Paper 2H

### **Edexcel and BTEC Qualifications**

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at <a href="https://www.edexcel.com">www.edexcel.com</a> or <a href="https://www.edexcel.com">www.btec.co.uk</a>. Alternatively, you can get in touch with us using the details on our contact us page at <a href="https://www.edexcel.com/contactus">www.edexcel.com/contactus</a>.

## Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: <a href="https://www.pearson.com/uk">www.pearson.com/uk</a>

### **General Marking Guidance**

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

| The only correct answer is <b>D pancreas</b>  | (1)<br>AO1 1  |
|---|---|
| A is incorrect because the liver is the target organ for insulin it does not produce it |   |
| B is incorrect because the heart does not produce insulin                               |   |
| C in not correct because the kidneys do not produce insulin                             |   |
|   | A is incorrect because the liver is the target organ for insulin it does not produce it  B is incorrect because the heart does not produce insulin  C in not correct because the kidneys do not |

| Question<br>Number | Answer   | Mark         |
|--------------------|--|--------------|
| 1(a)(ii)           | The only correct answer is <b>B dissolved in blood</b> plasma                    | (1)<br>AO1 1 |
|                    | A is incorrect because hormones do not travel along neurones                     |              |
|                    | C is incorrect because insulin does not attach to red blood cells                |              |
|                    | D is not correct because hormones do not move by osmosis or in white blood cells |              |
|                    |  |              |

| Question<br>Number | Answer   | Additional<br>Guidance                            | Mark         |
|--------------------|--|---|--------------|
| 1(b)               | <ul> <li>A description including:</li> <li>(take a sample of urine and) add Benedict's reagent (1)</li> <li>heat the solution (in a water bath) (1)</li> </ul> | accept solution for reagent                       | (3)<br>AO1 2 |
|                    | <ul> <li>observe the colour change to<br/>(brick) red (1)</li> </ul>   | accept other colours yellow, green, orange, brown |              |

| Question<br>Number | Answer                                      | Mark         |
|--------------------|---|--------------|
| 1(c)               | Any two from:  • volume of urine (1)        | (2)<br>AO1 2 |
|                    | • volume of Benedict's (reagent) (1)        |              |
|                    | • concentration of Benedict's (reagent) (1) |              |
|                    | • temperature (1)                           |              |
|                    | • time left (in the water bath) (1)         |              |

(Total for question 1 = 7 marks)

| Question<br>Number | Answer                      | Mark  |
|--------------------|-----------------------------|-------|
| 2(a)(i)            | plasma                      | (1)   |
|                    | •                           | AO2 1 |
|                    | (accept phonetic spellings) |       |

| Question<br>Number | Answer  | Mark         |
|--------------------|---|--------------|
| 2(a)(ii)           | The only correct answer is <b>D oxygen</b>  | (1)<br>AO1 1 |
|                    | A is incorrect because carbon dioxide is not needed for respiration                     |              |
|                    | B is incorrect because urea is not carried by red blood cells or needed for respiration |              |
|                    | C is not correct because amino acids are not needed for respiration                     |              |
|                    |   |              |

| Question<br>Number | Answer   | Additional guidance   | Mark         |
|--------------------|--|---|--------------|
| 2(a)(iii)          | • phagocytes (1)   | answers can be in either order                              | (2)<br>AO1 1 |
|                    | <ul> <li>lymphocytes / B cells /<br/>memory cells (1)</li> </ul> | accept T cells  |              |
|                    |  | accept other<br>correctly named<br>white blood cells<br>(1) |              |

| Question<br>Number | Answer   | Additional guidance   | Mark         |
|--------------------|--|---|--------------|
| 2(b)(i)            | 470 ÷ 100 or 4.7 (1)   | accept correct<br>answer on answer<br>line for 3 marks  | (3)<br>AO2 1 |
|                    | $(4.7 \times 44) = 206.8 (1)$ 207  OR $44 \div 100 \text{ or } 0.44 (1)$ $(0.44 \times 470) = 206.8 (1)$ | award two marks<br>for 206.8 / 206  |              |
|                    | 207  OR  44 × 470 or 20680 (1)  (20680 ÷ 100) = 206.8 (1)  |   |              |
|                    | 207  | ecf for a calculated number in the working to the nearest whole number  accept alternative methods of calculating percentages |              |
|                    |  | award two marks<br>for 263<br>award one mark for<br>263.2   |              |

| Question<br>Number | Answer   | Additional guidance  | Mark         |
|--------------------|--|--|--------------|
| 2(b)(ii)           | Any two from:  • wear gloves / wash hands (1)  | accept wear a mask<br>accept use hand gel<br>accept the doctor<br>covers any open<br>wounds / cuts | (2)<br>AO2 1 |
|                    | • sterilise skin (of donor) (1)  | accept clean the skin  |              |
|                    | <ul> <li>use sterile needle (1)</li> <li>cover the wound after taking<br/>the blood (1)</li> </ul> | accept sterilise<br>equipment  |              |

(Total for question 2 = 9 marks)

| Question<br>Number | Answer                                      | Mark         |
|--------------------|---|--------------|
| 3(a)(i)            | vacuole / large vacuole / permanent vacuole | (1)<br>AO2 1 |
|                    | (accept phonetic spellings)                 |              |

| Question<br>Number | Answer   | Mark         |
|--------------------|--|--------------|
| 3(a)(ii)           | Any one from:  | (1)<br>AO2 1 |
|                    | <ul> <li>it has a large surface area / it is long / large<br/>surface area : volume (1)</li> </ul> |              |
|                    | • thin (cell) walls (1)  |              |
|                    | many mitochondria (1)  |              |

| Question<br>Number | Answer   | Additional<br>Guidance  | Mark         |
|--------------------|--|---|--------------|
| 3(a)(iii)          | An explanation including three from:                           |   | (3)<br>AO2 1 |
|                    | <ul> <li>(root hair cells grow)<br/>underground (1)</li> </ul> | accept roots grow<br>underground / in<br>the soil   |              |
|                    | <ul> <li>where there is no sunlight /<br/>light (1)</li> </ul> |   |              |
|                    | <ul> <li>so they can't photosynthesise</li> <li>(1)</li> </ul> | accept roots can't<br>photosynthesise /<br>chloroplasts are<br>needed for<br>photosynthesis |              |

| Question<br>Number | Answer   | additional guidance   | Mark              |
|--------------------|--|---|-------------------|
| 3(b)(i)            | A description including two of the following:                                    | accept reverse<br>argument about<br>cells not in salt<br>solution | (2)<br>AO3<br>2ab |
|                    | <ul> <li>in tap water chloroplasts are<br/>near the {cell wall / cell</li> </ul> |   |                   |

| membrane / edge of the cell} (1)  |  |  |
|---|--|--|
| <ul> <li>in salt water chloroplasts are<br/>in the middle of the cells /<br/>chloroplasts clump together<br/>(1)</li> </ul> | accept cells appear<br>larger / cells are<br>more magnified (in<br>salt water) (1) |  |

| Question<br>Number | Answer  | Additional<br>Guidance  | Mark         |
|--------------------|---|---|--------------|
| 3(b)(ii)           | <ul> <li>An explanation including three from:</li> <li>water has moved (1)</li> <li>by osmosis (1)</li> <li>from a high water concentration to low water concentration (1)</li> </ul> | accept correct<br>references to the<br>concentration<br>gradient / water<br>potential / low to<br>high solute<br>concentrations | (3)<br>AO2 1 |
|                    | <ul> <li>through a partially-permeable membrane (1)</li> </ul>  |   |              |

(Total for question 3 = 10 marks)

| Question number | Answer  | Additional guidance                  | Mark |
|-----------------|---|--------------------------------------|------|
| 4(a)            | Any two from:  • temperature (1)  |                                      | (2)  |
|                 | <ul> <li>humidity / water levels</li> <li>(1)</li> </ul>                          |                                      |      |
|                 | <ul> <li>{size / volume / size of<br/>holes / material} of bag<br/>(1)</li> </ul> | accept the bags need to be identical |      |

| Question number | Answer                               | Additional guidance                                  | Mark |
|-----------------|--------------------------------------|--|------|
| 4(b)(i)         | correct data selected and subtracted | accept correct answer on the answer line for 2 marks | (2)  |
|                 | 200 - 120 = 80 (1)                   |  |      |
|                 | rate calculated                      |  |      |
|                 | 80 ÷ 50 = 1.6 (g per day)            |  |      |
|                 |                                      | ecf accept 2.6 for 1 mark (oak)                      |      |

| Question number | Answer   | Additional guidance | Mark |
|-----------------|--|---------------------|------|
| 4(b)(ii)        | An answer including:   | ORA                 | (2)  |
|                 | <ul> <li>both holly and oak leaves<br/>decrease in mass (1)</li> </ul> |                     |      |
|                 | oak leaves decrease in<br>mass faster (1)                              |                     |      |

| Question number | Answer   | Additional guidance   | Mark |
|-----------------|--|---|------|
| 4(c)            | An explanation linking:  | accept nutrients<br>for minerals                              | (2)  |
|                 | <ul> <li>(decomposition of leaves) release<br/>minerals / named minerals (1)</li> </ul>                    | accept recycling of minerals /                                |      |
|                 | <ul> <li>which are absorbed / used by other<br/>organisms / plants / primary<br/>producers (1)</li> </ul>  | nutrients for two<br>marks                                    |      |
|                 | OR   |   |      |
|                 | <ul> <li>(if they weren't decomposed)<br/>leaves would build up covering<br/>(small) plants (1)</li> </ul> | accept (small)<br>plants would die                            |      |
|                 | <ul> <li>small plants wouldn't {get light /<br/>be able to photosynthesise} (1)</li> </ul>                 |   |      |
|                 |  | accept supplies energy to decomposers / named decomposers (1) |      |

| Question number | Answer                          | Additional guidance  | Mark |
|-----------------|---------------------------------|--|------|
| 4(d)            | bacteria / fungi / detritivores | accept microorganisms / named {decomposers / detritivores} | (1)  |

| Question number | Answer  | Mark |
|-----------------|---|------|
| 4(e)            | An explanation including two from:  | (2)  |
|                 | <ul> <li>the change in mass of snails is smaller than the change in mass of the leaves / {not all the mass / only 120 g} of the leaves is transferred to the snails (1)</li> <li>some of the leaves were {not digested</li> </ul> |      |

/ absorbed} / some of the leaves were {excreted / egested}
(1)

- some mass was used up in {respiration / providing energy} for the snail (1)
- some mass / energy was used up by the snail moving (1)
- leaf mass may be digested by decomposers (1)

(Total for question 4 = 11 marks)

| Question number | Answer  | Additional guidance                             | Mark          |
|-----------------|---|---|---------------|
| 5(a)(i)         | A plan including three from:  | ignore belt<br>transect                         | (3)<br>AO3 3a |
|                 | • use a quadrat (1)   | accept square / grid                            |               |
|                 | <ul> <li>use a random number generator<br/>(to decide the areas to sample) /<br/>use random co-ordinates (1)</li> </ul> |   |               |
|                 | • (use a key) to identify the plants (1)  |   |               |
|                 | <ul> <li>count the number of plant<br/>species (1)</li> </ul>   | ignore sample the<br>number of plant<br>species |               |

| Question number | Answer   | Additional guidance  | Mark         |
|-----------------|--|--|--------------|
| 5(a)(ii)        | Any three from:  |  | (3)<br>AO1 2 |
|                 | <ul> <li>measure the temperature with a<br/>thermometer (1)</li> </ul>   | accept heat for temperature                                |              |
|                 | <ul> <li>measure the light levels using a {lux /<br/>light} meter (1)</li> </ul>   | accept<br>photometer /<br>phone app / light<br>sensor      |              |
|                 | <ul> <li>measure the levels of water in the soil<br/>using a water {meter / sensor / wet - dry<br/>mass of soil sample} (1)</li> </ul> | accept data logger   |              |
|                 | <ul><li>rainfall using a {measuring cylinder /<br/>beaker} (1)</li></ul>   |  |              |
