# Q1.

A cactus is a plant that lives in a dry environment.

The image below shows part of a cactus plant.

(a)	Give <b>one</b> adaptation shown in the image above that helps to prevent the cactus from being eaten by animals.	
		(1)
b)	A plant may produce poisons that make animals unwell.	
	What is this type of defence mechanism?	
	Tick (✓) <b>one</b> box.	
	Chemical	
	Mechanical	
	Physical	(1)
c)	Some desert plants only grow leaves after it has rained.	(-,
	As soon as the soil dries out, the leaves fall off.	
	How could the leaves falling off the plant be an advantage to a plant that lives in a dry environment?	
	Tick (✓) <b>one</b> box.	

## AQA Biology GCSE - Plant Tissues, Organs & Systems

	The plant is less likely to reproduce.	
	The plant will not lose as much water.	
	The plant will photosynthesise faster.	
: :	stem of a cactus is green.	
	What causes the green colour in the ste	m?
	What is the advantage to the cactus of h	naving a green stem?
	stem of a cactus contains many different	
	What name is given to a group of tissues  Tick (✓) one box.	s working together?

### **Q2.**

Figure 1 shows a cross section of a leaf.

Figure 1

(a)	Which cell is most transparent?			
	Tick (✓) <b>one</b> box.			
	A B	c	D	
(h)	Which cell structure in a leaf r	mesonhvll cell is	s <b>not</b> found in	

(b) Which cell structure in a leaf mesophyll cell is **not** found in a root hair cell?

(1)

Plants lose water through their leaves.

- (d) Water is taken in by the roots, transported up the plant and lost from the leaves.

Which scientific term describes this movement of water?

\_\_\_\_\_

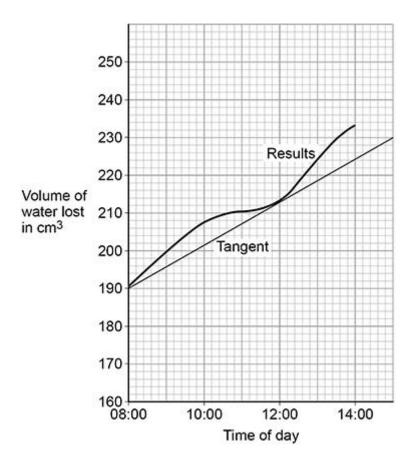

(e) Which change would decrease the rate of water loss from a plant's leaves?

## AQA Biology GCSE - Plant Tissues, Organs & Systems

Increased light intensity Increased density of stomata Increased temperature  Compare the structure and function of xylem tissue and phloem tissue.	Tick (✓) <b>one</b> box.	
Increased density of stomata  Increased temperature	Increased humidity	
Increased temperature	Increased light intensity	
	Increased density of stomata	
Compare the structure and function of xylem tissue and phloem tissue.	Increased temperature	
Compare the structure and function of xylem tissue and phloem tissue.		
	Compare the structure and run	ction of xylem tissue and philoem tissue.

Figure 2 shows the total volume of water lost from a plant over 6 hours.

Figure 2

(g) Determine the rate of water loss at 12:00

Use the tangent on the graph above.

Give your answer:

- in cm³ per minute
- in standard form.

Rate of water loss = \_\_\_\_\_ cm<sup>3</sup> per minute

(4)

(h) The rate of water loss at midnight was much lower than at 12:00

	Explain why.	
	(Total 17 m	(2) narks)
Q3.		
Diffu	sion is an important process in animals and plants.	
(a)	What is meant by the term diffusion?	
(b)	Figure 1 shows part of a leaf.	(2)
	Figure 1	
	CO <sub>2</sub> Mesophyll cell Stomata	
	Molecules of carbon dioxide diffuse from the air into the mesophyll cells.	
	Which <b>two</b> changes will increase the rate at which carbon dioxide diffuses into the mesophyll cells?	
	Tick (✓) <b>two</b> boxes.	
	Decreased number of chloroplasts in the cells	

(2)

(c)

Decreased surface area of cells in contact with the air
Increased carbon dioxide concentration in the air
Increased number of stomata that are open
Increased oxygen concentration in the air
Diffusion also happens in the human lungs.
Figure 2 shows the human breathing system.
Figure 2
Capillary
Explain how the human lungs are adapted for efficient exchange of gases by diffusion.

#### **Q4**.

This question is about leaves.

(a) Complete the sentences.

Choose answers from the box.

epidermis	phloem	palisade mesophyll
	waxy cutic	le xylem
The layer of cells lin	ing the uppe	r surface and lower surface of a
leaf is the		·
The part of the leaf	where most p	photosynthesis occurs
is the		

Water is transported to the leaf in the

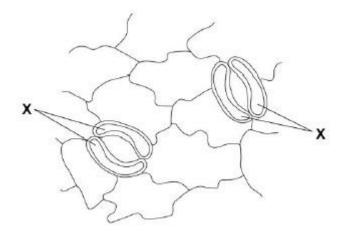

(3)

Water is lost through small openings on the lower surface of plant leaves.

These small openings are called stomata.

Figure 1 shows two stomata on the lower surface of a leaf.

Figure 1

(b) The cells labelled **X** control the width of the stomata.

What are the cells labelled X?

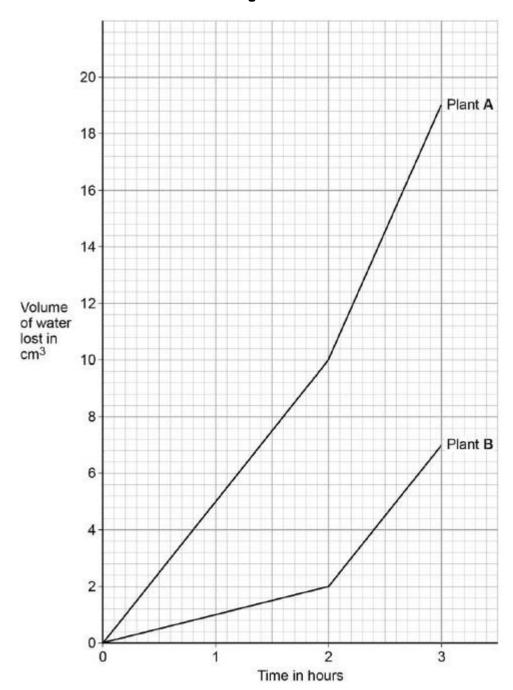

## AQA Biology GCSE - Plant Tissues, Organs & Systems

Tick (✓) <b>one</b> box.	
Guard cells	
Mesophyll cells	
Root hair cells	
Stem cells	
	(1)
(c) What is the function of the stomata?	
Tick (✓) one box.	
To allow light into the leaf	
To let carbon dioxide into the leaf	
To let sugars out of the leaf	
To protect the leaf from pathogens	
	(1)
(d) How is water lost from a leaf?	
Tick (✓) one box.	
By evaporation	
By respiration	
By translocation	
	(1)
A student investigated the volume of water lost from two plants.	

The plants were different species.

Figure 2 shows the student's results.

Figure 2

(e)	Calculate the difference in the volume of water lost by plant <b>A</b> compared to
	plant <b>B</b> in the first hour.

\_\_\_\_\_

Difference in volume = \_\_\_\_\_ cm<sup>3</sup>

(2)

(f)	What could cause plant <b>A</b> to lose water at a faster rate than plant <b>B</b> ?	
	Tick (✓) <b>one</b> box.	
	Plant <b>A</b> has fewer stomata per leaf.	
	Plant <b>A</b> is smaller.	
	Plant <b>A</b> has more leaves.	
	Plant <b>A</b> has smaller leaves.	
		(1)
(g)	After the first 2 hours, both plants were moved to a new room.	
	Suggest <b>one</b> reason why both plants lost water at a faster rate in the new room.	
		(1)
(h)	Some plants have adaptations to stop them from being eaten by animals.	
	Figure 3 shows part of a holly plant.	
	Figure 3	

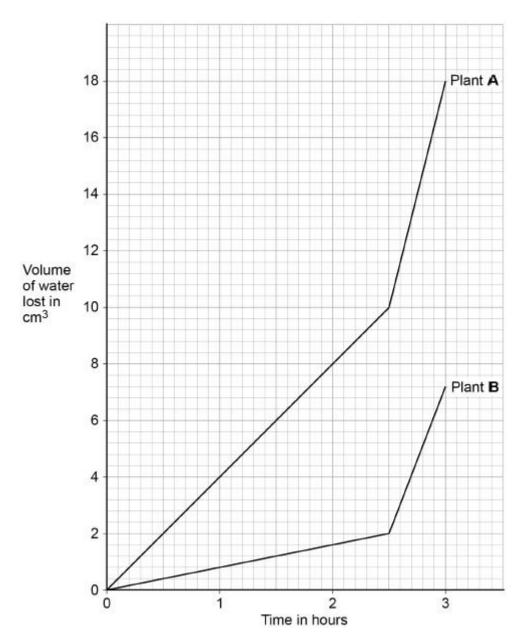

Describe **one** way the holly plant is adapted to stop it being eaten by animals.

Both plants were kept together.

**Figure 1** shows the student's results.

	(Total 11 m
Wat	er moves from a plant to the atmosphere through the leaves.
(a)	How is the volume of water lost from the leaves controlled?
(b)	Describe the transport of water through a plant from the roots to the atmosphere.

Figure 1

(c) Suggest **one** reason for the difference in the rate of water loss from the two plants in the first 2.5 hours.

(1)

Both plants were moved to a different place at 2.5 hours.

(d) Calculate the rate of water loss per hour in plant **B** from 2.5 hours to 3 hours.

Give your answer to 2 significant figures.

	Rate of water loss =	cm³/hour
Suggest <b>two</b> after 2.5 hou	reasons why the rate of water loss in l	both plants changed
1101 2.5 1100		

## Q6.

Plants are made up of cells, tissues and organs.

(a) Draw **one** line from each level of organisation to the correct plant part.

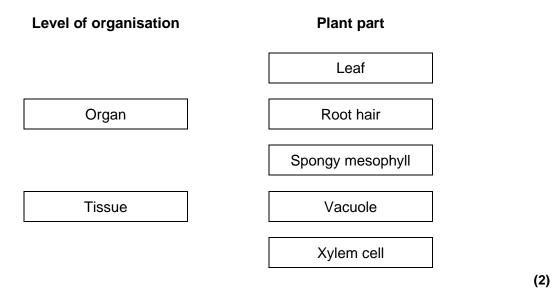

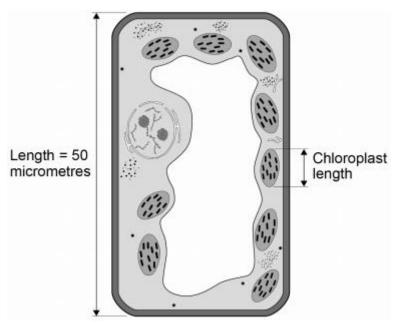

Figure 1 shows a plant cell drawn to scale.

(2)

Figure 1

(b)	Where in a plant would	I the cell in <b>Figure 1</b> be found?

(1)

(d) What is part T?

Guard cell		
Phloem		
Stoma		
Xylem		
A leaf is an organ	made of tissues.	
What is a tissue?		
Draw <b>one</b> line froi <mark>Tissue</mark>	m each tissue to its	function.  Function
	m each tissue to its	
	1	Function  Allows diffusion of gases
Tissue	1	Allows diffusion of gases through the leaf  Allows light through to the photosynthesising parts of
Tissue Epidermis		Allows diffusion of gases through the leaf  Allows light through to the photosynthesising parts of the leaf

Q9.

A student carried out an investigation using leaf epidermis.

This is the method used.

- 1. Peel the lower epidermis from the underside of a leaf.
- 2. Cut the epidermis into six equal sized pieces.
- 3. Place each piece of lower epidermis into a different Petri dish.
- 4. Add 5 cm³ of salt solution to the six Petri dishes. Each Petri dish should have a different concentration of salt solution.
- 5. After 1 hour, view each piece of epidermis under a microscope at ×400 magnification.
- 6. Count and record the total number of stomata present and the number of open stomata that can be seen in one field of view.

The student's results are shown in the table.

Concentratio n of salt solution in mol / dm³	Number of stomata in field of view	Number of open stomata in field of view	Percentage (%) of open stomata in field of view
0.0	7	7	100
0.1	8	8	100
0.2	7	6	Х
0.3	9	6	67
0.4	10	4	40
0.5	9	2	22

	<b>X</b> =
Give <b>o</b> ı	ne conclusion from the results in the table above.
	ould the student find out what concentration of salt solution would n half of the stomata being open?

(d)	The student measure 0.375 mm.	ed the real diameter of the field of view t	o be
	Calculate the numbe placed in 0.4 mol / dr	r of open stomata per mm² of leaf for the	e epidermis
	Use information from	the table above.	
	Take $\pi$ to be 3.14		
	Numbe	r of open stomata =	per mm² (3)
(e)		hows two guard cells surrounding a closunding an open stoma.

### Q12.

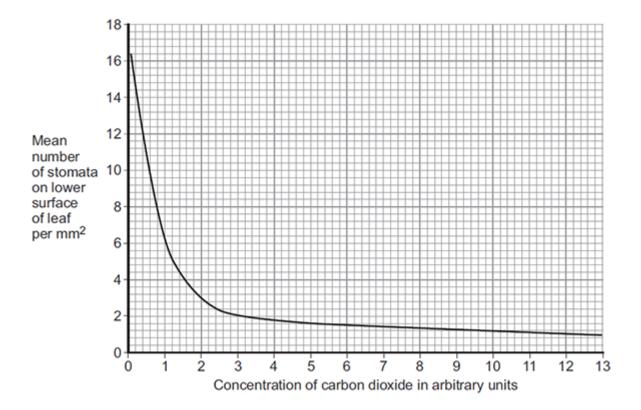

Carbon dioxide enters a plant through stomata on the leaves.

(a) Name the cells that control the size of the stomata.

(b) Scientists grew tomato plants in air containing different concentrations of carbon dioxide.

The scientists recorded the number of stomata found on the lower surface of the leaves of plants grown at each carbon dioxide concentration.

The graph below shows the results.

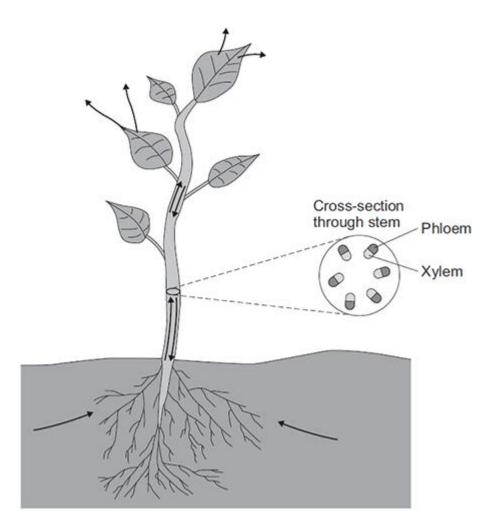

(i)	Describe the relationship between the mean number of stomata per mm <sup>2</sup> and carbon dioxide concentration.
(ii)	Suggest a reason for the relationship you described in part <b>(b)(i)</b> .
(i)	Suggest <b>one</b> disadvantage to a plant of having a large number of stomata per mm <sup>2</sup> on each leaf.
(ii)	Suggest <b>one</b> environmental condition where a large number of stomata per mm <sup>2</sup> on each leaf would be a disadvantage.
	(Total 6 ma

#### Q13.

In this question you will be assessed on using good English, organising information clearly and using specialist terms where appropriate.

Plants transport many substances between their leaves and roots.

The diagram below shows the direction of movement of substances through a plant.

Describe how **ions**, **water** and **sugar** are obtained and transported through plants.

In your answer you should refer to materials moving upwards in a plant and to

materials moving downwards in a plant.
