| Question |  | Marks | Guidance Notes |
| :---: | :---: | :---: | :---: |
| 1 (a (i) | single celled/unicellular ; <br> no (true) nucleus / no nuclear membrane ; loop of DNA ; <br> no, (membrane-bound) organelles ; e.g. no mitochondria / chloroplasts (peptidoglycan/murein) cell wall ; <br> reproduce by binary fission ; <br> small(er) /70S, ribosomes ; <br> plasmids ; | [max 2] | I DNA strand unqualified $\mathbf{A}$ naked DNA <br> I flagella, capsule, pili, cilia <br> $\mathbf{R}$ cellulose cell wall |
| (ii) | swim / movement / AW ; | [1] |  |
| (b) | harmless/attenuated/dead/AW, form of, (named) pathogen/antigen used ; <br> (vaccine) injected/swallowed ; <br> ref to specific/unique/AW, antigen ; <br> lymphocytes make antibodies; <br> ref to memory cells; <br> ref to active immunity ; <br> rapid, immune response/AW, if exposure to same pathogen ; herd immunity ; <br> AVP ; e.g. detail of active immunity/smallpox became extinct | [max 4] | A long term immunity |
| (c) (i) | $\begin{aligned} & 12-0.4 \text {; } \\ & \text { 11.6, au /arbitrary units ; } \end{aligned}$ | [2] |  |
| (ii) | large/rapid/immediate increases; <br> peaks at, $\underline{50} \mathrm{~s} / \underline{12 \mathrm{AU} \text {; }}$ <br> then decrease to, around $5-4.6 \mathrm{AU} /$ by $125-150 \mathrm{~s}$; <br> fluctuates/stays (fairly) constant, between $125-150$ s and 250 s $/ 4.4$ <br> and $4.8 \pm 0.2 \mathrm{AU}$; | [max 3] | I comparisons to 'without toxins' on graph <br> A increases and decreases from 50 s |

| Question |  | Marks | Guidance Notes |
| :---: | :---: | :---: | :---: |
| (iii) | active transport; <br> (through) protein (molecules/gates/pumps/AW) ; <br> (protein) in cell membrane ; <br> using, energy/ATP (from respiration) ; <br> (movement) against a concentration gradient/AW ; | [max 3] |  |
| (d) (i) | (small) intestine ; | [1] | A large intestine/duodenum/jejunum/ileum /rectum/colon |
| (ii) | oral rehydration (therapy/salts/treatment/solution); <br> drink mixture of, sugar/ nutrients and, salt/ions ; replace lost, water/fluids ; <br> water must be, uncontaminated/boiled/sterilised/clean/AW ; antibiotics ; | [2] | A receive intravenous fluids I drink more water |
|  |  | [Total: 18] |  |

| Question | Answers | Marks | Additional Guidance |
| :---: | :---: | :---: | :---: |
| 2 (a) | $\begin{aligned} & \text { E } \\ & \text { A } \\ & \text { B } \\ & \text { D } \\ & \text { C } \end{aligned}$ | [max 3] | all 5 correct $=3$ marks <br> $3 / 4$ correct $=2$ marks <br> $1 / 2$ correct $=1$ mark |
| (b) | soft body ; <br> not segmented ; <br> mantle ; <br> visceral mass ; <br> (muscular) foot; ignore feet/legs <br> produce slime/ have slimy body; A mucus <br> radula/rasping tongue/AW ; <br> hydrostatic skeleton ; | [max 2] |  |
|  |  | [Total: 5] |  |

| Question | E Answers |  |  |  | Marks | Additional Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 3 (a (i) | go to 2 |  |  |  | [max 3] | $\begin{aligned} & 5 / 6 \text { right }=3 \\ & 3 / 4 \text { right }=2 \\ & 1 / 2 \text { right }=1 \\ & 0 \text { right }=0 \end{aligned}$ |
|  |  | go to 5 |  |  |  |  |
|  | Gymnopis multiplicata |  | B |  |  |  |
|  | go to 3 |  |  |  |  |  |
|  | Triturus cristatus |  | C |  |  |  |
|  | go to 4 |  |  |  |  |  |
|  | Necturus maculosus |  | D |  |  |  |
|  | Ambystoma tigrinum |  | G |  |  |  |
|  | go to 6 |  |  |  |  |  |
|  | Oreophrynella quelchii |  | E |  |  |  |
|  | Polypedates leucomystax |  | F |  |  |  |
|  | Rana temporaria |  | A |  |  |  |
| (b) | ```habitat, destruction / change ; A examples of destruction, e.g. deforestation, soil erosion (named) pollution ; A global warming / climate change / acid rain (fungal) disease ; hunting (for pet trade / food); lack of food / starvation; ignore competition for food competition, with alien / introduced / exotic, species ; predation by introduced species; roadkill ; AVP;``` |  |  |  | [max 3] |  |
|  |  |  |  | Tota | [6] |  |

| Question |  |  |  | Marks | Additional Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $4 \quad$ (a (i) | reptiles ; |  |  | [1] |  |
| (ii) |  |  | ;,; |  | $5 / 6$ right $=3$ |
|  | go to 2 |  |  |  | $3 / 4$ right $=2$ |
|  | go to 3 |  |  |  | $0 \text { right }=0$ |
|  | go to 4 |  |  |  |  |
|  | Chalcides minutus | B |  |  |  |
|  | go to 5 |  |  |  |  |
|  | go to 6 |  |  |  |  |
|  | Brookesia perarmata | G |  |  |  |
|  | Calumma parsonii | C |  |  |  |
|  | Amblyrhynchus cristatus | A |  |  |  |
|  | Cyclura lewisi | E |  |  |  |
|  | Abronia graminea | F |  |  |  |
|  | Varanus komodoensis | D |  | [3] |  |

| Question |  | Marks | Additional Guidance |
| :---: | :---: | :---: | :---: |
| $4 \quad$ (b) | encourages biodiversity ; ora prevents extinction ; <br> encourages genetic diversity (within each species) ; <br> maintain food, webs/chains ; <br> food for predators ; <br> increasing research/source of medicine ; <br> AVP ;; <br> e.g. maintain habitats for other organisms/ethical/moral/aesthetic reasons/tourism | max [3] | A species diversity <br> A an example of feeding |
| (c) (i) | reduced genetic diversity ; <br> identical offspring; <br> negative traits passed on ; <br> more competition for local resources; <br> less chance of survival in a varying environment ; <br> one disease could wipe out total population ; <br> AVP ; e.g. less chance of evolving | max [2] | A no genetic diversity <br> A unfavourable/bad traits. |
| (ii) | offspring may not be as well adapted to environment ; slower process/takes longer (than asexual reproduction) ; requires partner/ two parents ; less energy efficient/requires more energy/many eggs is wasteful ; AVP ; | $\max$ [2] | A description e.g. good characteristics are not always passed on. |
| (d) (i) | reduction division/chromosome number is halved/one set of chromosomes; <br> diploid to haploid ; <br> for production of gametes; <br> daughter cells are not genetically identical/genetically different ; | [2] | to each other or parent |

| Question |  | Marks | Additional Guidance |
| :---: | :--- | :---: | :---: |
| 4 | (ii) | for adaption to, new/changed environment; <br> causes (genetic) variation; <br> competition for survival ; <br> best suited reproduce; <br> allows natural selection; <br> allows evolution; <br> AVP; | ignore mutations unqualified. |
|  |  | max [3] |  |
|  | Total: 16] |  |  |

| 5 (a) | 1 antennae; <br> 2 elongated bodies; <br> 3 segmented body/many segments ; <br> 4 many ( $\geqslant 10$ ) legs; <br> 5 (one or two pairs of) legs on each segment ; <br> 6 exoskeleton ; <br> 7 jointed legs ; | max [3] |
| :---: | :---: | :---: |
| (b) | 1 length of antennae; <br> 2 number of sections on antennae ; <br> 3 presence/absence, of tail pieces/AW ; <br> 4 length of tail pieces ; <br> 5 length of legs; <br> 6 number of leg joints ; <br> 7 total number of legs; <br> 8 position of legs on body ; <br> 9 number of legs per segment; <br> 10 size/shape of segments; <br> 11 number of body segments ; <br> 12 length of body; <br> 13 head shape; <br> 14 presence/absence 'spots/markings' ; | max [3] |

| (c) (i) | nucleus ; | [1] | Ignore chromosomes |
| :---: | :---: | :---: | :---: |
| $5 \quad$ (ii) | 1 idea that animals are identified accurately ; R identify unqualified <br> 2 barcoding is, cheap/easy/quick/efficient; <br> 3 barcoding is useful if distinguishing characteristics/dichotomous key are difficult ; <br> 4 identify previously unknown species ; <br> 5 helps to identify, threatened/endangered species; | max [2] |  |
| (iii) | 1 ref to genes; <br> 2 codes for (specific) proteins ; <br> 3 stores genetic information ; <br> 4 can be copied to pass on information to new cells ; | max [2] |  |
| (d) (i) | 1 all arrows point from food to feeder ; <br> 2 millipedes eat dead leaves and fungi ; <br> 3 food chain : bacteria $\rightarrow$ nematodes $\rightarrow$ springtails $\rightarrow$ centipedes; <br> 4 centipedes eat millipedes, springtails and earthworms ; | [4] |  |
|  | 1 ref to, respiration/decomposition ; <br> 2 release carbon dioxide; <br> 3 carbon dioxide is taken in by, plants/photosynthesis ; | max [2] |  |
|  |  | [Total:17] |  |
