

# 14. Coordination and response

## 14.1 Coordination and response

### Paper 3 and 4

#### Marking Scheme

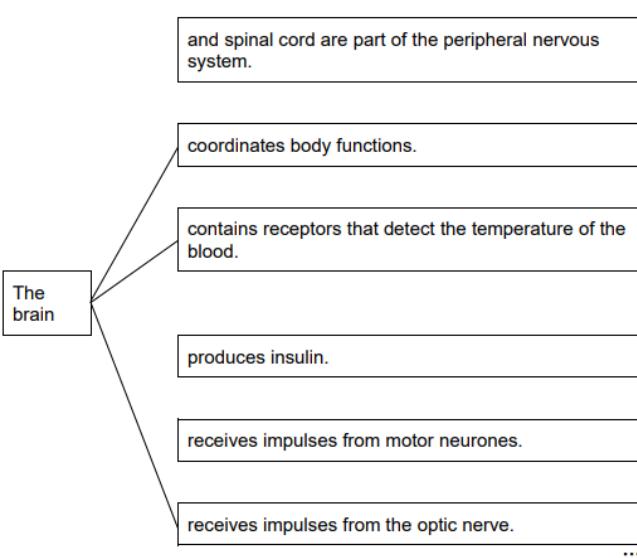

## Q1.

(a)(i)	X – spinal cord ; Y – motor neurone ;	2	
(a)(ii)	(leg) muscle ;	1	
(a)(iii)	hammer tapping (knee / leg) / AW ;	1	
(a)(iv)	it is rapid / immediate / AW ; it doesn't require conscious thought / is automatic / AW ; AVP ; e.g. protective / may not involve the brain	2	
(b)	$3750000 \text{ (times)} / 3.75 \times 10^6$ ;;	2	MP1 conversion of <b>both</b> values to the same unit e.g. $1.5 \text{ m} = 1500 \text{ mm}$ or $0.0004 \text{ mm} = 0.000004 \text{ m}$  MP2 correct calculation e.g. $1500 \div 0.0004$ or $1.5 \div 0.000004 = 3750000$  ecf MP2 no conversion (MP1) i.e. $3750 = 1 \text{ mark}$
(c)	synapse / synaptic gap / synaptic cleft ;	1	

## Q2.

(a)(i)	(change in) temperature / heat / hot pan ;	1	
(a)(ii)	muscles ;	1	
(a)(iii)	brain ; spinal cord ;	2	either order
(b)	motor (neurone) ;    relay (neurone) ;    sensory (neurone) ;	3	
(c)	synapse ;	1	

## Q3.

(b)	 <p>The brain</p> <p>and spinal cord are part of the peripheral nervous system.</p> <p>coordinates body functions.</p> <p>contains receptors that detect the temperature of the blood.</p> <p>produces insulin.</p> <p>receives impulses from motor neurones.</p> <p>receives impulses from the optic nerve.</p> <p>;;;</p>	<p><b>3</b> one mark for each correct line  <b>R</b> each additional line</p>
-----	--	---

## Q4.

(a)	<p><i>in this order vertically from the top:</i></p> <p>receptor ;</p> <p>relay neurone ;</p> <p>effector / muscle / gland ;</p>	<b>3</b>
(b)	<p>Reflex actions are automatic. ;</p> <p>Reflex actions coordinate stimuli with responses. ;</p> <p>Reflex actions involve the central nervous system. ;</p>	<b>3</b>

## Q5.

(a)	<p>motor / effector, (neurone) ;</p> <p>impulse ;</p> <p>synapse ;</p>	<b>3</b>	
(b)	<p>light ;</p> <p>sound ;</p> <p>temperature ;</p> <p>touch ;</p> <p>chemicals ;</p> <p>AVP ; e.g. gravity / movement / stretch</p>	<b>3</b>	
(c)	<p>(stimulus detected by) receptor ;</p> <p>receptor passes (impulse) to sensory neurone ;</p> <p>sensory neurone passes (impulse) to, relay / intermediate, neurone ;</p> <p>relay neurone passes (impulse) to motor neurone ;</p> <p>motor neurone passes to muscle / gland / effector ;</p> <p>automatic / involuntary / AW ;</p> <p>AVP ;</p>	<b>4</b>	

## Q6.

	nervous ; motor ; impulses ; synapses ; fast ;	5	
--	--	---	--

## Q7.

(b)(i)	label line and the letter X that touches the neurone coming from the brain to the eye ;	1	
(b)(ii)	<p><i>any three from:</i></p> <p>1 correct ref to neurotransmitter (molecules) ;      2 (neurotransmitters) released from vesicles (from first or presynaptic neurone / into synaptic gap) ;      3 (neurotransmitters) diffuse across (gap / cleft) ;      4 (neurotransmitters) bind / fit / attach / receive to, receptor (proteins / molecules) / membrane proteins (on the next neurone) ;</p>	3	
(b)(iii)	<p><i>total of four from:</i></p> <p>1 identify <b>E</b> as ciliary muscle and <b>K</b> as suspensory ligaments and <b>F</b> as lens ;</p> <p><i>max three from:</i></p> <p>2 ciliary muscle / <b>E</b>, contracts ;      3 suspensory ligaments / <b>K</b>, slacken / loosen / AW ;      4 lens / <b>F</b>, becomes more convex / AW ;      5 more refraction ;      6 light / image (of object), is focussed onto the, retina / fovea / <b>A</b> or <b>B</b> ;</p>	4	

## Q8.

(a)	first gap: central <b>and</b> second gap: peripheral ;	1	both needed for the mark							
(b)(i)	<table border="1" style="display: inline-table; vertical-align: middle;"> <tr> <td>T</td> <td>P</td> <td>S</td> <td>Q</td> <td>N</td> <td>M</td> <td>R</td> </tr> </table> <span style="display: inline-block; vertical-align: middle; text-align: center; margin: 0 10px;">;;</span>	T	P	S	Q	N	M	R	2	MP1 for <b>P</b> first and <b>M</b> at the end MP2 for <b>S</b> , <b>Q</b> , <b>N</b> in that order but in <i>any</i> position in relation to <b>P</b> and <b>M</b>
T	P	S	Q	N	M	R				
(b)(ii)	<p><i>any two from:</i></p> <p>touch ;      temperature ;      AVP ;</p>	2	e.g. pressure / pain							
(b)(iii)	circular / radial, <u>muscle</u> ;	1	<b>A</b> iris							
(c)	<p><i>total of five from:</i></p> <p>1 only the first neurone releases neurotransmitters ;      2 only the second neurone has (complementary) receptors ;</p> <p><i>max four from:</i></p> <p>3 <i>ref. to</i> neurotransmitter (molecules) ;      4 (neurotransmitter is released) from vesicles ;      5 into the synaptic gap ;      6 the junction between the neurones is the synapse ;      7 (neurotransmitter molecules) diffuse (across the gap) ;      8 <i>ref. to</i> receptors are complementary in shape (to neurotransmitter) ;      9 (neurotransmitter molecules) bind with receptors (on the next neurone) ;      10 impulse is then stimulated (in the next neurone) ;</p>	5								

## Q9.

(a)	<b>X</b> – vesicle (membrane) ; <b>Y</b> – synapse / synaptic gap ;	2	
(b)	<i>any five from:</i> movement is, impaired / slower / non-existent ; slower reflexes / AW ; fewer vesicles ; fewer neurotransmitters in, vesicles / <b>X</b> ; fewer neurotransmitters, released (when an impulse arrives) ; fewer neurotransmitters <u>diffuse</u> across the, synapse / gap / cleft ; fewer neurotransmitters bind to receptor proteins ; fewer / no, impulses (in the, postsynaptic / second / next, neurone) ; AVP ;	5	

## Q10.

(a)	central <u>and</u> peripheral (nervous system) ;	1	
-----	--	---	--

## Q11.

(a)	<i>one mark for each row:</i>			5	
	function	name	letter on Fig. 4.1		
	conducts impulses to CNS	sensory / afferent, neurone	<b>V</b>		
	conducts impulses to an effector	motor / effector / efferent, neurone	<b>Y</b>		
	conducts impulses within the CNS	relay / connector / intermediate, neurone	<b>X</b>		
	detects / senses, stimulus / change in temperature	receptor	<b>U</b>		
	contracts / causes movement / carry out response	biceps / muscle / effector	<b>Z</b>		
(b)	<i>any four from:</i> 1 vesicles move towards end of, pre-synaptic neurone / axon / AW ; 2 vesicles fuse with (pre-synaptic) membrane ; 3 (named) neurotransmitter released ; 4 neurotransmitter <u>diffuses</u> across, synapse / gap / synaptic cleft ; 5 neurotransmitter binds to receptor, on post-synaptic neurone ; 6 <u>impulse</u> (generated) in post-synaptic neurone ; 7 AVP ;			4	

## Q12.

(f)(i)	<b>A</b> sensory neurone ; <b>B</b> vesicle ; <b>C</b> synapse / synaptic cleft ; <b>D</b> receptor molecules ;	4
(f)(ii)	<i>any three from:</i> drug <b>X</b> blocks, <b>D</b> / receptor (molecules) ; neurotransmitters are not able to bind to, <b>D</b> / receptor (molecules) ; drug <b>X</b> is similar in shape to neurotransmitter / complementary to shape of receptor (molecule) ; drug <b>X</b> stops, impulse/electrical signal, being transmitted in relay neurone ; (so) less / no, pain felt with drug <b>X</b> ;	3

## Q13.

(c)	<i>general marking point</i> neurotransmitters move across, synapse / gap / junction / AW ;  <i>atropine</i> neurotransmitter cannot, bind to / enter / reach, receptors ; therefore no impulses (along, next / postsynaptic, neurone) / no impulses reach the CNS ; no sensitivity to stimuli / feels no pain / painkiller ; no, contraction of muscle / response ; depressant ;  <i>eserine</i> neurotransmitter stays in, synapse / synaptic gap ; neurotransmitter can bind to receptor (rather than stay in synapse) ; continuously stimulates the, next / postsynaptic, neurone ; (more) impulses are sent (in, next / postsynaptic, neurone) ; repeated, contraction of muscle / response ; stimulant ;	6	<b>A</b> reaction time is longer / no reflex
-----	---	---	--

## Q14.

(a)	long, to transmit (impulse), over (long) distance / faster / direct connection ; <u>mitochondria</u> to (release energy), for transmission impulse / protein synthesis / active transport / making (neuro)transmitters ; <u>vesicles</u> to, carry / hold / release, chemicals / (neuro)transmitters (into synapse) ; (neuro) <u>transmitters</u> are released, to allow connection to other neurones / across a synapse ; receptors / vesicles, allow unidirectional transmission ; AVP ;	3	
(a)(ii)	brain <u>and</u> spinal cord (only) ;	1	
(b)(i)	stimulus / light (detected by) retina / rod / cone / receptor ; <u>reference to</u> (electrical) <u>impulse / electrical signal</u> ; sensory neurone → relay / connector, neurone → motor neurone ; <u>reference to</u> synapses between neurones ; effector / (circular) muscles (in iris), contract / <u>respond</u> ;	3	
(b)(ii)	automatic / involuntary ; receptors / neurones / nerve, still function ;	1	
(c)(i)	<b>E</b> – vesicle ; <b>F</b> – <u>neurotransmitter</u> ; <b>G</b> – (neurotransmitter) receptor (molecule / site / protein) ;	3	
(c)(ii)	arrow drawn from right to left, pointing left ;	1	

**Q15.**

(d)	hormones are chemicals / hormonal coordination is only chemical ; transported in the, blood / circulatory system ; (effects are) <u>slower</u> (than nerves) ; <b>ora</b> (effects are) <u>longer</u> lasting ; <b>ora</b> each hormone may have more than one target, organ / tissue / cells ; <b>ora</b>	3	
-----	--	---	--
