Question	E Answers	Marks	Additional Guidance	
1 (a)	broad leaves / Ranunculus does not have narrow leaves / AW; branched veins / not parallel veins; flower parts, in 5s / not in 3s; R 'flowers in fives'		A wide / large surface area A net(work) of veins / reticulate I two cotyledons	
(b)	1 (cells of <b>W</b> were) in, the winter / cold / low light / short days / AW; I refs. to water starch, has been used / converted to glucose or sugar / broken down; to provide energy; <b>R</b> 'produce' in respiration; to keep the, plant / cells, alive; I for growth, etc. root has become a source (not a sink); when there has been, no / few, leaves; so there has been, no / little / less, photosynthesis; ref. to, light / temperature / cold, as limiting factor(s);	[max 3]	assume answers refer to <b>W</b> unless told otherwise – accept ORA for <b>S</b> 1 (cells of <b>S</b> were) in summer / warm / high light / AW; I refs. to water 2 starch has been, stored / produced; 8 result of (more) photosynthesis; 6 root is a sink (not a source); 7 many leaves;	
(c)	<ul> <li>sucrose / sugar, transported / translocated; A travels / in phloem</li> <li>glucose / monosaccharide;</li> <li>joined together (by chemical bonds); R if refers to joining sucrose</li> <li>condensation reaction / described;</li> <li>glucose added to growing chain / AW;</li> <li>(starch is a) long / chain, molecule; A is a polysaccharide enzyme provides active site for reaction;</li> <li>enzyme, catalyses / speeds up, the reaction;</li> <li>ref. to lock and key (model);</li> </ul>	[max 3]	if given breakdown of starch award MP6 to 9 only  A 'join together to make maltose'  A polymer / polymerisation  A enzyme(s) is/are (biological) catalyst(s)	

Que	stion	E	Answers	Marks	Additional Guidance
1 (	(d)	1 2 3 4 5	increase in (kinetic) energy; more, collisions / AW; between, enzyme / active site, and, substrate / AW; ref. to optimum temperature / works best at ≈ 30 °C; denatured, at high temperature / above 30 °C / above optimum;	[max 2]	I particles, movement  R 'destroyed' / 'killed' / 'damaged'
	[Total: 10]				

Question	E Answers		Marks	Additional Guidance	
2 (a)	1 2 3 4 5 6 7	substrate / sucrose, fits into enzyme; active site; ref to shape of molecules, fitting together / matching / AW; lock and key; sucrose and water / molecules, close together within enzyme; glucose and fructose produced + enzyme, unchanged / reused; lowers energy needed for reaction;	[max 3]	R similar/same shape  A form, enzyme substrate complex / ESC	
(b) (i)	temperature constant so not another variable / AW; (near) optimum temperature; denatures at higher temperatures / less or not active at lower temperature;		[max 2]	R denatures at lower temperatures	
(ii)	1 2 3 4	increase in activity from pH 3 to pH 7 / ORA; optimum pH / peak activity, pH 7; decrease in activity from pH 7 to pH 11 / ORA; any rate of activity quoted;	[max 3]	A pH 6.8 – 7.2 A neutral pH R 6 – 7 A correct ref. to no activity below pH 3 or above pH 11	
(iii)		P – pepsin / protease; Q – amylase / carbohydrase; R – lipase / trypsin / protease / amylase / carbohydrase / maltase / sucrase / lactase;	[3]		
(c)	1 2 3 4 5 6	marking points not linked – allow ecf amylase, breaks down starch; starch → maltose / glucose / sugar(s); (named) protease, breaks down protein; protein → polypeptides / peptides / amino acids; lipase, breaks down fats; fat → fatty acids and glycerol;	[max 4]	alternatives for MP1: (named) carbohydrase breaks down (correctly named) carbohydrate alternatives for MP2: maltose → glucose / sucrose → glucose and fructose / carbohydrates → sugars	
	•	<u> </u>			

3	(a		description required not an explanation, so ignore collisions / denaturation MP3 may be awarded for comments within the range 50 °C to 90 °C	
		1 2 3 4 5	no activity, at / below, 10 $^{\circ}$ C; increased activity between 10 $^{\circ}$ C and 90 $^{\circ}$ C; steep(est) increase / exponential increase, between 50 $^{\circ}$ C and 90 $^{\circ}$ C; optimum / peak / maximum, at 90 $^{\circ}$ C; <b>A</b> 'works best at' / most active at above 90 $^{\circ}$ C activity decreases;	[3 max]
	(b)		ignore details of genetically modified bacteria	
		1 2	(bacteria grown in) fermenter / bioreactor / vat; R tanks (bacteria provided with) substrate / feedstock / food substances / glucose / sugars / starch / minerals / whey / waste substances / nutrients / amino acids / AW; R food / raw materials	
		3	oxygen / aerobic conditions ; A air bubbled through / aerated	
		4 5	optimum conditions / 26 °C / pH 5–6 / sterile; stirred to, prevent settling / mix bacteria with nutrients;	
		6	(bacteria) grow / reproduce / divide / multiply, rapidly;	
		7 8	(extracellular) enzymes, secreted / released / AW; R production enzymes, extracted / harvested / separated / collected / removed (from, bacteria / mixture);	F4
			A ref to filtration / crushing bacteria R crushing enzymes	[4 max]
	(c)		enzymes must be in the correct context do not award MP9 if there are no other points made	
		1	protein digested to, amino acids / (poly)peptides ; <b>A</b> broken down / hydrolysed	
		2	(by) protease(s);	
		3 4	fats digested to fatty acids (and glycerol); (by) <u>lipase(s)</u> ; <b>R</b> ligase	
		5	(by) amylase;	
		6 7	starch to, sugar, maltose, glucose; (by) cellulase;	
		8	breaksdown cellulose (fibres) to release stains; A reduces pilling	
		9	idea that products are, soluble / washed away (in the water);	[4 max]
	(d)	1	thrombin / protease;	
		2 3	fibrinogen converted to fibrin; soluble (protein);	
		4	fibrin, traps blood cells / forms mesh / forms 'nets';	[3 max]

[Total: 14]

(a (i) excretion; [1] (ii) biological; A made by, cells / organisms catalyst / described; (made of) protein / AW; bio-catalyst = 2 marks [max 2] **(b) (i)** pH; **A** ph / PH / Ph [1] (ii) temperature; R heat *ignore* room size / mass / quantity / amount / surface area / type, of potato; volume of hydrogen peroxide; concentration of hydrogen peroxide; A 'amount' with respect to hydrogen peroxide R refs to catalase / enzyme [max 2] (c) award two marks if correct answer (0.56 / 0.57 / 0.58) is given – may be in white space below the table if no answer or incorrect answer award one mark for correct working if 0.5 or 0.6 award one mark 10 divided by 17.4 0.56 / 0.57 / 0.58 ;; [2] (d) graph x-axis labelled pH; y-axis labelled – must have units rate (of oxygen production / of reaction), cm<sup>3</sup> min <sup>1</sup> / cm<sup>3</sup> per min; points all correct; use the overlay, but A ecf from (c) continuous and clear line, which may be either a curve which may not go through all the points or straight lines between points **R** if line goes beyond plotted points [4] (e) (i) increase in rate to (pH) 6 then decrease / reaches a peak at (pH) 6; any rate given as a data quote, with cm<sup>3</sup> min<sup>-1</sup> / cm<sup>3</sup> per min; [2] (ii) pH 6 is, optimum / when enzyme 'works best'; following points may refer to optimum or sub-optimum ref to shape of enzyme; ref to active site: ref to denaturation; A destroyed R 'killed' ref to substrate / hydrogen peroxide, fitting into, enzyme / active site; [max 3] [Total: 17]
