

Mark scheme - Ecosystems

Question	Answer/Indicative content	Marks	Guidance
1	A ✓	1 (AO1.2)	
	Total	1	
2	A ✓	1 (AO1.1)	
	Total	1	
3	D ✓	1 (AO1.1)	
	Total	1	
4	C	1 (AO 1.1)	
	Total	1	
5	B	1 (AO 2.1)	
	Total	1	
6	B	1 (AO 1.1)	<p><u>Examiner's Comments</u></p> <p>This question assessed knowledge and understanding of abiotic factors. Just over half of candidates did not achieve this mark and responded incorrectly with a named biotic factor.</p>
	Total	1	
7	A	1 (AO 1.1)	<p><u>Examiner's Comments</u></p> <p>This question was the most accessible question in the multiple-choice section A, with most candidates correctly answering A which represents evaporation.</p>
	Total	1	
8	C ✓	1 (AO1.1)	
	Total	1	
9	A ✓	1 (AO1.2)	
	Total	1	

1 0	a		3 (AO3 x 1.1)	<p>Each correct line = 1 mark</p> <p>DO NOT ALLOW more than 1 line from each letter</p>	
	b	prevents lake drying out / replenishes lake water / washes minerals into the lake ✓	1 (AO1.1)	<p>ALLOW idea of lack of water in lake causing harm to organisms that live in the water / will provide organisms with sufficient/enough water to live in</p> <p>ALLOW idea of providing organisms with dissolved oxygen</p> <p>IGNORE will provide organisms with more water</p> <p>IGNORE nutrients</p>	
		Total	4		
1 1	a	i	Three/3 ✓	1 (AO2.2)	
		ii	(sun)light / the sun ✓	1 (AO1.1)	
		ii	<p>Award one mark for: (an organism) that lives on/in on a (host) organism ✓</p> <p>Idea parasite benefits at the expense to its <u>host</u> ✓</p> <p>Award two marks for: An organism that feeds on a living organism / An organism that causes harm to a living organism ✓✓</p>	2 (AO2 x 1.1)	IGNORE an organism that feeds on another organism unless qualified
	b	<p>Any three from: biological control ✓</p> <p>nematodes will eat cutworms ✓</p> <p>less cutworms ✓</p> <p>less stevia eaten ✓</p> <p>increase the yield ✓</p>	3 (AO3 x 2.1)	<p>ALLOW predators of the cutworms added</p> <p>ALLOW more crop</p>	
		Total	7		
1 2	a	<p>to let air / oxygen in ✓</p> <p>for (aerobic) respiration ✓</p>	2 (AO1 x 2.1) (AO1 x 1.1)	<p>DO NOT ALLOW carbon dioxide</p> <p>DO NOT ALLOW anaerobic respiration</p>	

	b	to allow a valid comparison of the results ✓	1 (AO3.1 b)	
	c	i correct plots ✓✓ smooth curved line between points ✓	3 (AO3 x 2.2)	ALLOW +/- half a square All correct = 2 marks 3 or 4 plots correct = 1 mark DO NOT ALLOW sketchy line / line thicker than half a square
		ii increases up to 10 days/70°C ✓ then decreases ✓	2 (AO3.1 a)	ALLOW increases up to 9-11 days ALLOW increases by 44°C
		ii i FIRST CHECK THE ANSWER ON ANSWER LINE If answer = 39 (°C) award 2 marks 70-31 ✓ = 39 (°C) ✓	2 (AO2.2) (AO1.2)	
		i v normal compost is made by aerobic respiration ✓ aerobic respiration releases more energy than anaerobic respiration ✓	2 (AO2 x 2.1)	2 correct ticks = 2 marks 1 correct ticks = 1 mark 3 ticks two correct = 1 mark 3 ticks one correct = 0 marks 4 or more ticks = 0 marks
	d	i FIRST CHECK THE ANSWER ON ANSWER LINE If answer = 8 (kg) award 3 marks 1500-1200 OR 300 ✓ 300/40 OR 7.5 ✓ = 8 (kg) ✓	3 (AO3 x 2.2)	ALLOW one mark for clear evidence of rounding incorrect answer correctly to the nearest whole number
		ii less carbon dioxide is produced ✓	1 (AO3.1 b)	ALLOW less contribution to global warming / greenhouse effect / climate change
	e	minerals ✓	1 (AO1.1)	more than one answer ringed = no mark
		Total	17	
1 3		i correctly chosen axes, labelled with units ✓ suitable scale for the number of bird boxes ✓ bars correctly drawn ✓	4 (AO 2.2)	height (m) must be on x-axis DO NOT ALLOW scale that use less than half the grid ALLOW +/- half a square IGNORE ?touching adjacent bars

		suitable key ✓		<p><u>Examiner's Comments</u></p> <p>This was a good question which differentiated between the higher and lower ability candidates whereby they had to generate a bar chart from the information provided. Lower ability candidates struggled to choose the correct axis for the independent and dependant variable. A suitable scale and key were the highest marking points. Over a quarter of candidates were given full marks.</p>  <p>AfL</p> <p>Candidates should be encouraged to use the headings in a table to identify the independent and dependent variables. Convention is that the first column is most likely to be the independent variable. This should support them in choosing the correct axis, as the convention is that the independent variable goes on the x axis.</p>
	ii	<p>Any three from: great tits (nest) higher (in the trees) / ORA ✓</p> <p>this protects them from weasels who live mainly on the ground / ORA ✓</p> <p>idea flycatchers (nest) at all heights ✓</p> <p>as pine martens can move up and down/climb the tree ✓</p>	3 (AO 3.2b)	<p>ALLOW weasels can't reach them/great tits ALLOW fewer great tits lower down as weasels eat them = 2</p> <p>ALLOW flycatchers can get killed anywhere in tree by pine marten</p> <p>IGNORE pine martens eat flycatchers and live in the trees</p> <p><u>Examiner's Comments</u></p> <p>Lower ability candidates could not analyse the information and draw conclusions. A number of candidates did not interpret the data correctly. Some compared the great tits with the flycatchers instead of identifying the predator prey relationship they had with the weasels or pine martens to explain the number of nests at different heights. A lot of candidates just stated that pine martens live in a tree, which is in the stem of the question.</p>
		Total	7	
1 4		 <p>✓✓</p>	2 (AO 1.1)	<p>ALLOW numbers matched to correct boxes All 4 lines correct = 2 marks 2 or 3 lines correct = 1 mark 1 or 0 lines correct = 0 mark</p> <p><u>Examiner's Comments</u></p> <p>This question differentiated well, and many candidates were able to demonstrate their knowledge and understanding of the carbon cycle.</p>
		Total	2	
1 5	i	feeds on seeds it is a primary (consumer) ✓	2 (AO 2.1)	<p>ALLOW eats seeds which are the producer/first trophic level</p> <p>ALLOW eats insects which are the primary consumer</p>

		feeds on insects, then it is a secondary (consumer) ✓		<p>ALLOW it feeds on seeds and insects if no other marks scored. IGNORE references to herbivores/carnivores/predators</p> <p>Examiner's Comments</p> <p>This question was on application of knowledge and understanding of interdependence in food webs. Over half of all candidates were given at least one mark.</p>
	ii	<p>predator because it eats/kills pine martens ✓</p> <p>competitor (with pine martens) because they eat flycatchers/same prey ✓</p>	2 (AO 2.1)	<p>ALLOW pine martens are foxes prey ALLOW foxes hunt pine martens</p> <p>ALLOW competitor because pine martens also eat flycatchers</p> <p>Examiner's Comments</p> <p>This question differentiated well on application of knowledge and understanding on interdependence. The main reason why the lower ability candidates did not score was due to them not identifying and stating the predator relationship and the competitor relationship.</p>
	ii i	insect(s) / Great tits	1 (AO 1.1)	<p>Examiner's Comments</p> <p>This question was well answered by the candidates correctly identifying an organism in the second trophic level using their knowledge and understanding.</p>
		Total	5	
1 6	a	four / 4 ✓	1 (AO 1.2)	<p>Examiner's Comments</p> <p>Over half of candidates achieved this mark and correctly identified the number of secondary consumers.</p>
	b	<p>badger number have increased ✓</p> <p>more competition for food / less slugs to eat ✓</p>	<p>2 (AO 3.1b)</p> <p>(AO 3.2b)</p>	<p>IGNORE reference to hedgehog numbers dropping</p> <p>ALLOW badgers eat more slugs so less for hedgehogs ALLOW less food to eat</p> <p>IGNORE badgers are predators of hedgehogs IGNORE they both eat slugs</p> <p>Examiner's Comments</p> <p>The majority of candidates could identify there was a lack of slugs to eat for the hedgehogs. The higher ability candidates could link the increase in numbers, as the reason for the lack of food. Candidates that didn't score here just stated that the hedgehogs decrease which wasn't credit worthy, as the question asked for an explanation.</p>
	c i	<p>in country/advantage/where badgers live, if it rolls up in a ball then will provide more protection / less attacks from badgers/predators ✓</p> <p>in cities/disadvantage/many roads, it will be run over by cars ✓</p>	2 (AO 2 × 2.1)	<p>ALLOW in country/advantage/where badgers live hedgehogs have defence against predators/badgers ALLOW hedgehogs have a reduced risk of being eaten</p> <p>Examiner's Comments</p>

				<p>More than half of candidates achieved at least one mark here. This question differentiated well between all abilities. Those candidates that didn't score did not link the hedgehogs to each conclusion properly. E.g. advantage/in country/where badgers live to correct conclusion. Exemplar 9 was credited 1 mark for the advantage conclusion.</p> <p>Exemplar 9</p> <p>In country areas, when badgers come to p on hedgehogs, the hedgehogs have protection. badgers are prevented if they ever go to touch the hedgehogs.</p>
	ii	<p>hedgehogs that run away are more likely to survive / less likely to get run over ✓</p> <p>they will reproduce ✓</p> <p>pass on the allele/gene for running away ✓</p> <p>over time/many generations (running away will become more common) ✓</p>	<p>4 (AO 4 × 2.1)</p>	<p>ALLOW ORA for each marking point ALLOW reference to how change occurred e.g. mutation for running away</p> <p>ALLOW offspring produced / breed together</p> <p>ALLOW pass on advantageous gene IGNORE trait is pass on / genes are passed on</p> <p>Examiner's Comments</p> <p>A number of candidates achieved at least 1 mark, mainly that hedgehogs which run away are more likely to survive. A small number of candidates confused natural selection with genetic engineering. Exemplar 10 shows an answer credited 3 out of 4 marks.</p> <p>Exemplar 10</p> <p>because these hedgehogs don't stay and run away they can't get ran as easily and they don't get eaten by predators that can get through the. This could be natural selection as hedge hogs who have survived are able to pass on these genes to offspring.</p>
		Total	9	
1 7		<p>idea of less plants/percentage of plants/% cover in shade/closer to the tree ✓</p> <p>less light (in shade/closer to the tree)✓</p>	<p>4 (AO 1.2)</p> <p>(AO 2.1)</p> <p>(AO</p>	<p>ORA for all marking points</p> <p>ALLOW shows negative correlation</p> <p>IGNORE less sun IGNORE in shade no photosynthesis / no light</p> <p>ALLOW less light for photosynthesis (closer to the tree) 2 marks ALLOW photosynthesis less effective (closer to the tree)</p>

			<p>less photosynthesis (in shade/closer to the tree)✓</p> <p>less food/raw materials produced for growth (in shade/closer to the tree)✓</p>	<p>3.1b)</p> <p>(AO 3.2b)</p>	<p><u>Examiner's Comments</u></p> <p>A number of candidates achieved 1 mark on this question for the idea of less plants/% cover closer to the tree/shade or the reverse argument. Most candidates didn't link this to less light for photosynthesis. Less food for growth was the least credited marking point.</p>
			Total	4	
18		i	21800 (kg) ✓	<p>1</p> <p>(AO 2.2)</p>	<p><u>Examiner's Comments</u></p> <p>Over half of the candidates could correctly calculate the amount of biomass lost between plants and humans. The most common incorrect answer was 19800kg.</p>
		ii	egestion/excretion/respiration ✓	<p>1</p> <p>(AO 1.1)</p>	<p>ALLOW named excretory product /faeces/urine/ uneaten parts/heat</p> <p>IGNORE movement/waste</p> <p>DO NOT ALLOW growth</p> <p><u>Examiner's Comments</u></p> <p>This again was a good differentiator, with most common credited answer being respiration. A lot of candidates referred incorrectly to the cattle eating them as a cause of biomass loss.</p>
			Total	2	
19		a	<p>type of plant material ✓</p> <p>will affect the rate of microbes decomposing ✓</p> <p>OR</p> <p>Size/SA of plant material ✓</p> <p>will affect the rate of microbes decomposing ✓</p> <p>OR</p> <p>mass of plant material ✓</p> <p>will affect the rate of microbes decomposing ✓</p> <p>OR</p> <p>oxygen ✓</p> <p>will affect the (aerobic) respiration of microbes ✓</p>	<p>2</p> <p>(AO 3.1a)</p>	<p>Second marking point is dependent on a correct factor being stated</p> <p>ALLOW decay/breakdown/rot throughout</p> <p>ALLOW decomposers/saprophytes/bacteria/fungi throughout</p> <p>ALLOW amount of plant material</p> <p>IGNORE amount of compost / composter size</p> <p><u>Examiner's Comments</u></p>

				<p>This question was challenging for the candidates. The majority couldn't identify a correct control variable and explain the effect on microbe action. The most common answer was to keep the water the same, which was the independent variable. Exemplar 5 demonstrates an answer which did not gain credit.</p> <p>Exemplar 5</p> <p><i>She should keep the water constant!</i></p>
	b	i	<p>any two from:</p> <p>A reaches the highest temperature ✓</p> <p>A has a higher temperature for longer/at the start ✓</p> <p>temperature increases quicker in A ✓</p> <p>temperature falls quicker in A ✓</p> <p>towards the end the temperature in A is lower ✓</p>	<p>2 (AO 2 × 2.2)</p> <p>ALLOW ORA</p> <p>IGNORE A has a higher temperature</p> <p>IGNORE references to decay</p> <p>IGNORE comparisons to section B</p> <p>Examiner's Comments</p> <p>In this question the most common correct scoring point was that A reaches the highest temperature and increases quicker. Some candidates didn't make it a comparative answer with C, so did not gain credit. A small number of candidates referred to rate of decay instead of temperature or compared section A with section B.</p>
		ii	<p>Decay/breakdown/decompose/rot is fastest (in A) ✓</p>	<p>1 (AO 3.2a)</p> <p>Examiner's Comments</p> <p>The majority of lower ability candidates did not score this question and linked watering more often to faster decay. Answer included seeing the effects of water on growth, also references to increases temperature on the plant material.</p>
	c		<p>(oxygen) is needed for microbes (that cause decay) ✓</p> <p>for (aerobic) respiration ✓</p>	<p>2 (AO 1.2)</p> <p>AW decomposers/saprophytes/ bacteria/fungi</p> <p>IGNORE references to enzymes</p> <p>Examiner's Comments</p> <p>In this question candidates linked oxygen and decay correctly but did not gain credit as couldn't demonstrate their knowledge and understanding of microbes requiring oxygen for respiration.</p>
			Total	7
