## Unit 6T A2 Investigative Skills Assignment

For submission by 15 May 2011

<b>For this paper you must have:</b> <ul style="list-style-type: none"> <li>the Periodic Table/Data Sheet provided at the end of this paper</li> <li>the Task Sheet and your Candidate Results Sheet</li> <li>a ruler with millimetre measurements</li> <li>a calculator.</li> </ul>	<b>Time allowed</b> <ul style="list-style-type: none"> <li>1 hour</li> </ul>
<b>Instructions:</b> <ul style="list-style-type: none"> <li>Use black ink or black ball-point pen.</li> <li>Fill in the boxes at the top of this page.</li> <li>Answer <b>all</b> questions.</li> <li>You must answer the questions in the space provided. Do not write outside the box around each page or on blank pages.</li> <li>Do all rough work in this book. Cross through any work you do not want to be marked.</li> </ul>	<b>Information</b> <ul style="list-style-type: none"> <li>The marks for questions are shown in brackets.</li> <li>The maximum mark for this paper is 30.</li> <li>You will be marked on your ability to:             <ul style="list-style-type: none"> <li>organise information clearly</li> <li>use scientific terminology accurately.</li> </ul> </li> </ul>
<b>Details of additional assistance (if any).</b> Did the candidate receive any help or information in the production of this work? If you answer yes give the details below or on a separate page.  Yes <input type="checkbox"/> No <input type="checkbox"/>	

### Teacher Declaration:

I confirm that the candidate's work was conducted under the conditions laid out by the specification. I have authenticated the candidate's work and am satisfied that to the best of my knowledge the work produced is solely that of the candidate.

Signature of teacher ..... Date .....

As part of AQA's commitment to assist students, AQA may make your coursework available on a strictly anonymous basis to teachers, examining staff and students in paper form or electronically, through the Internet or other means, for the purpose of indicating a typical mark or for other educational purposes. In the unlikely event that your coursework is made available for the purposes stated above, you may object to this at any time and we will remove the work on reasonable notice. If you have any concerns please contact AQA.

To see how AQA complies with the Data Protection Act 1988 please see our Privacy Statement at [aqa.org.uk](http://aqa.org.uk).

### Section A

These questions are about the task, some reactions of iron(II) and iron(III) compounds.

You should use your Task Sheet and your Candidate Results Sheet to answer them.

Answer **all** questions in the spaces provided.

- 1** *Prussian Blue* dye is an insoluble complex with the formula  $\text{KFe}[\text{Fe}(\text{CN})_6]$ . Calculate the  $M_r$  of this complex using data from the Periodic Table. Give your answer to one decimal place.

.....

.....

(1 mark)

- 2** In one investigation a student obtained 1.65 g of *Prussian Blue*. Calculate the amount, in moles, of *Prussian Blue* obtained in this investigation.

.....

.....

(1 mark)

- 3** The iron(III) salt used in the Task was in excess. The  $10.0 \text{ cm}^3$  solution of potassium hexacyanoferrate(II) had a concentration of  $0.75 \text{ mol dm}^{-3}$ . The equation for the formation of *Prussian Blue* from iron(III) sulfate and potassium hexacyanoferrate(II) is shown below.

Calculate the maximum amount, in moles, of *Prussian Blue* that could have been formed in the reaction.

Show your working.

.....

.....

.....

(2 marks)

- 4** Use your answers to Question 2 and Question 3 to calculate the percentage yield of *Prussian Blue* obtained in this experiment.

.....

.....

(1 mark)

- 5 *Prussian Blue* dye is an insoluble solid and when prepared as described in **Part 1** it is impure.  
Suggest how the impurities present in the dye could be removed.
- .....
- .....
- (1 mark)
- 6 Give the formula for each of the iron-containing products formed in **Test 2**.
- Product using iron(II) sulfate solution .....
- Product using iron(III) nitrate solution .....
- (2 marks)
- 7 Write an ionic equation for the reaction of aqueous  $[\text{Fe}(\text{H}_2\text{O})_6]^{3+}$  ions with hydroxide ions to form a brown precipitate.
- .....
- (1 mark)

9

**Turn over for the next question**

**Turn over ►**

## Section B

Answer **all** questions in the spaces provided.

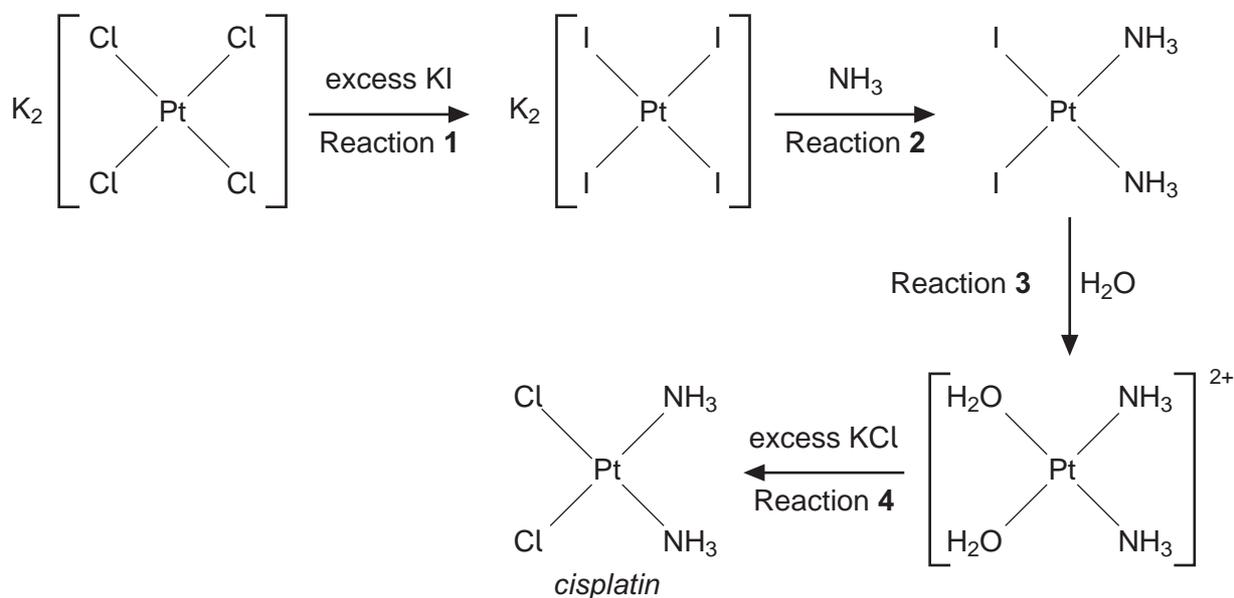

## Introduction

Complexes containing transition elements have a wide variety of uses including acting as dyestuffs like *Prussian Blue*.

*Cisplatin* is a platinum-based chemotherapy drug used to treat various types of cancers. It was the first member of a class of anti-cancer drugs that react with DNA in tumour cells.

*Cisplatin* is prepared from  $K_2PtCl_4$  according to the following scheme.

**All the reactions shown are reversible.**

- 8 Name the type of reaction occurring in all four steps of the scheme.

.....  
(1 mark)

- 9 Explain why an excess of potassium iodide is used in Reaction 1.

.....  
.....  
.....  
(2 marks)

10 (a) Write an equation for Reaction 1.

.....  
.....  
(1 mark)

10 (b) Calculate the percentage atom economy for the formation of  $K_2PtCl_4$  in Reaction 1.  
Show your working.

.....  
.....  
.....  
.....  
(2 marks)

11 In Reaction 3, silver nitrate solution is added to improve the yield of product.

11 (a) Write the **simplest ionic** equation for the reaction of iodide ions with silver nitrate.

.....  
(1 mark)

11 (b) Suggest why addition of silver nitrate improves the yield of product from Reaction 3.

.....  
.....  
(1 mark)

12 Suggest two reasons, other than poor practical technique, why the overall yield of *cisplatin* in this synthesis may be low.

Reason 1 .....

.....

Reason 2 .....

.....

(2 marks)

Turn over ►

**13** The *cisplatin* formed in Reaction 4 is impure. Outline how the impure solid is purified by recrystallisation.

.....

.....

.....

.....

.....

(3 marks)

**14** Platinum compounds are highly toxic.

**14 (a)** State why *cisplatin* is used in cancer treatment despite its toxicity.

.....

.....

(1 mark)

**14 (b)** Suggest a suitable precaution that should be taken by medical staff when using *cisplatin*.

.....

(1 mark)

**15** Other metal ions are also toxic to humans. A substance that can be used to treat such poisoning contains the ion  $\text{EDTA}^{4-}$ .  $\text{EDTA}^{4-}$  forms very stable complexes with metal ions. These complexes are **not** toxic.

**15 (a)** Write an equation for the reaction of  $\text{EDTA}^{4-}$  with aqueous copper(II) ions,  $[\text{Cu}(\text{H}_2\text{O})_6]^{2+}$

.....

(1 mark)

- 15 (b)** A solution containing  $\text{EDTA}^{4-}$  can also be used in a titration to determine the concentration of metal ions in solution.  
A river was polluted with copper(II) ions. When a  $25.0 \text{ cm}^3$  sample of the river water was titrated with a  $0.0150 \text{ mol dm}^{-3}$  solution of  $\text{EDTA}^{4-}$ ,  $6.45 \text{ cm}^3$  were required for complete reaction.  
Calculate the concentration, in  $\text{mol dm}^{-3}$ , of copper(II) ions in the river water.  
Show your working.
- .....  
.....  
.....  
.....
- (2 marks)
- 16** The determination of the concentration of copper(II) ions in a single sample of river water gives an unreliable value for the copper(II) ion pollution in the river.  
Give **one** reason why this value is unreliable.
- .....  
.....
- (1 mark)
- 17** Silver complexes can be used to identify a particular organic functional group.  
Give **one** example of a silver complex that can be used in this way and state the organic functional group it identifies.
- Silver complex .....
- Organic functional group .....
- (2 marks)
