0 2 . 3 The student uses this method to complete a titration.

- Rinse a burette with distilled water.
- Fill the burette with sodium hydroxide solution.
- Use a measuring cylinder to transfer 25 cm^3 of the citric acid solution into a conical flask.

0 5 A sample of antimony is analysed in a time of flight (TOF) mass spectrometer and is found to contain two isotopes, ^{121}Sb and ^{123}Sb

After electron impact ionisation, all of the ions are accelerated to the same kinetic energy (*KE*) and then travel through a flight tube that is 1.05 m long. A ^{121}Sb$^+$ ion takes 5.93×10^{-4} s to travel through the flight tube.
