Paper 2 Structured Questions AS Core

9701/23 May/June 2013

1 hour 15 minutes

Candidates answer on the Question Paper.

Additional Materials: **Data Booklet**

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a soft pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

Electronic calculators may be used.

You may lose marks if you do not show your working or if you do not use appropriate units.

A Data Booklet is provided.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

For Examiner's Use

This document consists of 11 printed pages and 1 blank page.

Answer all the questions in the spaces provided.

For Examiner's Use

[3]

1	Carbon disulfide, CS ₂ , is a volatile, flammable liquid which is produced in small quantities in volcanoes.					
	(a) Th	ne sequence of atoms in the CS ₂ molecule is sulfur to carbon to sulfur.				
	(i)	Draw a 'dot-and-cross' diagram of the carbon disulfide molecule. Show outer electrons only.				
	(ii)	Suggest the shape of the molecule and state the bond angle.				
		shape				
		bond angle	[3]			
	(b) C:	arbon disulfide is readily combusted to give CO_2 and SO_2 .				
	(i)	Construct a balanced equation for the complete combustion of CS ₂ .				
	(ii)) Define the term standard enthalpy change of combustion, ΔH_c^e .				

(c)		culate the standard enthalpy change of formation of ${\rm CS_2}$ from the following data. ude a sign in your answer.	For Examiner's Use
	star	ndard enthalpy change of combustion of $CS_2 = -1110 \text{kJ} \text{mol}^{-1}$	
	star	ndard enthalpy change of formation of $CO_2 = -395 \mathrm{kJ} \mathrm{mol}^{-1}$	
	staı	ndard enthalpy change of formation of SO ₂ = -298 kJ mol ⁻¹	
		[3]	
(d)		bon disulfide reacts with nitrogen monoxide, NO, in a 1:2 molar ratio. ellow solid and two colourless gases are produced.	
	(i)	Construct a balanced equation for the reaction.	
	/::\	What is the change in the evidation number of cultur in this reaction?	
	(ii)	What is the change in the oxidation number of sulfur in this reaction?	
		from to	
		[Total: 12]	

2	Methanol, CH ₃ OH, hydrogen, H ₂ .	can be	produced	industrially	by	reacting	carbon	monoxide,	CO,	with
	CO(c	ı) + 2H.	(a) ← C⊦	H.OH(a)		ΛH = -	-91 k.l m	∩l ^{–1}		

 $CO(g) + 2H_2(g) \rightleftharpoons CH_3OH(g)$ $\Delta H = -91 \text{ kJ mol}^{-1}$

The	e pro	cess is carried out at 4×10^3 kPa (40 atmospheres) and 1150 K.
(a)	(i)	State Le Chatelier's Principle.
		[2]
	(ii)	From your understanding of Le Chatelier's Principle, state the conditions of temperature and pressure that could be used in order to produce an increased yield of methanol in this process. In each case, explain why the yield would increase.
		temperature
		explanation
		pressure
		explanation
		[4]

(b) The carbon monoxide for use in the production of methanol may be formed by reacting carbon dioxide with hydrogen.

For Examiner's Use

$$CO_2(g) + H_2(g) \rightleftharpoons CO(g) + H_2O(g)$$
 $K_c = 1.44 \text{ at } 1200 \text{ K}$

A mixture containing 0.70 mol of CO_2 , 0.70 mol of H_2 , 0.30 mol of CO and 0.30 mol of H_2O was placed in a 1 dm³ flask and allowed to come to equilibrium at 1200 K.

Calculate the amount, in moles, of each substance present in the equilibrium mixture at 1200 K.

4 Compound **Q**, heptan-2-one, is found in some blue cheeses.

For Examiner's Use

compound Q

- (a) Compound Q may be reduced to R. Compound R may be dehydrated to give two different products, S and T.
 - (i) In the boxes below, draw the structural formulae of R, S, and T.

(ii)	State the reagents that would be used for each of these reactions in a school or college laboratory.
	reduction

dehydrationdehydration

[5]

[Total: 10]

(b)	Q is reacted separately wit	ne structural formula of the organic compound formed the heach reagent under suitable conditions. curs, write 'NO REACTION' in the box.	d when				
	Tollens' reagent						
	HCN						
	K ₂ Cr ₂ O ₇ /H ⁺						
			[3]				
(c)	The first stage of cheese m milk.	aking is to produce 2-hydroxypropanoic acid (lactic acid	d) from				
		CH ₃ CH(OH)CO ₂ H					
		lactic acid					
	Other than the use of a pH indicator, what reagent could you use to confirm the presence of some lactic acid in a sample of heptan-2-one? State what observation you would make.

5	Compounds containing the allyl group, CH_2 = $CHCH_2$ -, have pungent smells and are onions and garlic. Allyl alcohol, CH_2 = $CHCH_2OH$, is a colourless liquid which is soluble in water.						
	(a) Al	lyl alcohol behaves as a primary alcohol and as an alkene.					
		ve the structural formula of the organic compound formed when allyl alcohol is reparately with each of the following reagents.	eacted				
	(i)	acidified potassium dichromate(VI), heating under reflux					
	(ii)	bromine in an inert organic solvent					
	()						
	(iii)	cold, dilute, acidified potassium manganate(VII)					
	(iv)	hot, concentrated, acidified potassium manganate(VII)					
			[5]				
	(b) Al	lyl alcohol undergoes the following reactions.					
	(i)	When reacted with concentrated HCl at 100 °C, CH ₂ =CHCH ₂ Cl is formed.					
	State as fully as you can what type of reaction this is.						
	(ii)	When reacted with MnO ₂ at room temperature, CH ₂ =CHCHO is formed.					
		What type of reaction is this?					
			[2]				

(c)) Allyl alcohol can be converted into propanal in two steps.		
		$CH_2 \!\!=\!\! CHCH_2OH \xrightarrow{step II} CH_3CH_2CH_2OH \xrightarrow{step II} CH_3CH_2CHO$	
	(i)	What reagents and conditions would be used for each step?	
		step I	
		reagent(s)	
		condition(s)	
		atau II	
		step II	
		reagent(s)	
		condition(s)	
	(ii)	Allyl alcohol and propanal are isomers.	
		What form of isomerism do they display?	
		[5]	
(d)	Allyl alcohol may also be converted into propanal by using a ruthenium(IV) catalyst in water.		
		$\begin{array}{cccccccccccccccccccccccccccccccccccc$	
	Suggest what is unusual about this single step reaction.
