## MARK SCHEME for the May/June 2014 series

## 9701 CHEMISTRY

## 9701/35 Paper 3 (Advanced Practical Skills 1),

 maximum raw mark 40This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the May/June 2014 series for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level components and some Ordinary Level components.

| Page 2 | Mark Scheme | Syllabus | Paper |
| :---: | :---: | :---: | :---: |
|  | GCE AS/A LEVEL - May/June 2014 | 9701 | 35 |

| Question | Sections | Indicative material | Mark | Total |
| :---: | :---: | :---: | :---: | :---: |
| 1 (a) | MMO Collection | I Burette readings and correct volume given for dilution and volume between 24.00 and $26.00 \mathrm{~cm}^{3}$ | 1 |  |
|  | PDO Layout | II Initial and final readings and titre value given for rough titre <br> and initial and final readings for two (or more) accurate titrations (minimum of $2 \times 2$ box) | 1 |  |
|  | PDO <br> Recording | III Appropriate headings and units for accurate titration. and volume FA 3 added recorded for each accurate titre. Headings should match readings. <br> - initial/start (burette) reading/volume <br> - final/end (burette) reading/volume <br> - titre or volume/FA 1 used/added (but not "difference") unit: $/ \mathrm{cm}^{3}$ or $\left(\mathrm{cm}^{3}\right)$ or in $\mathrm{cm}^{3}$ or $\mathrm{cm}^{3}$ for each entry | 1 |  |
|  |  | IV All accurate burette readings recorded to $0.05 \mathrm{~cm}^{3}$. <br> The need to record to 0.05 applies only to the burette readings and not to the recorded titres. <br> Do not award this mark if: <br> - $50(.00)$ is used as an initial burette reading <br> - more than one final burette reading is $50 .(00)$ | 1 |  |
|  | MMO <br> Decisions | V Has two uncorrected, accurate titres within $0.1 \mathrm{~cm}^{3}$ <br> Do not consider the rough even if ticked. <br> Do not award this mark if having performed two titres within $0.1 \mathrm{~cm}^{3}$ a further titration is performed which is more than $0.10 \mathrm{~cm}^{3}$ from the closer of the initial two titres, unless a further titration, within $0.1 \mathrm{~cm}^{3}$ of any other titration has also been carried out. <br> Do not award the mark if any 'accurate' burette readings (apart from initial 0) are given to zero $d p$. | 1 |  |

Round any burette readings to the nearest $0.05 \mathrm{~cm}^{3}$.
Check and correct subtractions in the dilution and titre tables.
Examiner then selects the "best" titre using the hierarchy:
two identical; titres within $0.05 \mathrm{~cm}^{3}$; titres within $0.1 \mathrm{~cm}^{3}$; etc.
Candidate scaled titre $=$ Cand vol diluted $\times$ Cand mean titre/Sup vol diluted
Examiner compares candidate scaled titre with Supervisor's titre.

| (a) | MMO <br> Quality | VI, VII and VIII <br> Award VI, VII and VIII for $\delta \leq 0.20 \mathrm{~cm}^{3}$ <br> Award VI and VII for $0.20 \mathrm{~cm}^{3}<\delta \leq 0.40 \mathrm{~cm}^{3}$ | 3 | Award VI only for a difference of $0.40<\delta \leq 0.60 \mathrm{~cm}^{3}$ <br> If the "best" titres are $\geq 0.50 \mathrm{~cm}^{3}$ apart cancel one of the $Q$ <br> marks. |

|  | GCE AS/A LEVEL - May/June 2014 | 9701 | 35 |

| Question | Sections | Indicative material | Mark | Total |
| :---: | :---: | :---: | :---: | :---: |
| (b) | ACE Interpretation | Candidate must average two (or more) titres that are all within $0.20 \mathrm{~cm}^{3}$. <br> Working must be shown or ticks must be put next to the two (or more) accurate readings selected. <br> The mean should normally be quoted to $2 d p$ rounded to the nearest 0.01. <br> Two special cases where the mean may not be to 2 dp : allow mean to 3 dp only for 0.025 or 0.075 e.g. 26.325; <br> allow mean to 1 dp if all accurate burette readings were given to 1 dp and the mean is exactly correct. e.g. 26.0 and $26.2=26.1$ is correct but 26.0 and $26.1=26.1$ is incorrect. <br> Note: the candidate's mean will sometimes be marked as correct even if it is different from the mean calculated by the Examiner for the purpose of assessing accuracy. | 1 | [1] |
| (c) | ACE Interpretation <br> PDO Display | I Correctly evaluates $\frac{0.500 \times \text { vol diluted }}{250}$ in (i) <br> II Correctly calculates (i) $\times \frac{\text { (b) }}{1000}$ in (ii) <br> III Correctly calculates (ii) $\div 2$ in (iii) <br> IV Correctly calculates (iii) $\times \frac{1000}{25}$ in (iv) <br> V All answers given to 3 or 4 sf minimum 3 steps attempted to access this mark | 1 <br> 1 <br> 1 <br> 1 <br> 1 | [5] |
| (d) | ACE <br> Interpretation Conclusion | (i) smallest $=24.70$, largest $=24.90$ <br> (ii) lower conc FA 3 leads to greater titre therefore greater conc. of $\mathrm{Ca}(\mathrm{OH})_{2}$ | $\begin{aligned} & 1 \\ & 1 \end{aligned}$ | [2] |
| (e) | ACE Conclusion | limewater reacts with carbon dioxide in air | 1 | [1] |
| Qn 1 | Total |  | [17] |  |
