UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS GCE Advanced Subsidiary Level and GCE Advanced Level

## MARK SCHEME for the October/November 2011 question paper

## for the guidance of teachers

## 9701 CHEMISTRY

9701/31

Paper 3 (Advanced Practical Skills 1), maximum raw mark 40

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

• Cambridge will not enter into discussions or correspondence in connection with these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2011 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

	GCE AS/A LEVEL – October/November 2011	9701	31	

Question		Sections	Indicative material	Mark	
1	(a)	PDO Recording	I Thermometer readings for all experiments recorded to 0.0 or 0.5°C. (At least one recorded to 0.5°C.)	1	
		ACE Interpretation	II Calculation of all temperature changes correct.	1	
		MMO Quality	Award <b>III</b> for a temperature rise followed by constant temperature (within 0.5°C).	1	
			Award IV and V for a <b>maximum</b> rise within 0.5°C of supervisor.	1	
			Award <b>IV</b> for a <b>maximum</b> rise within 1.0°C of supervisor.	1	
			Award VI and VII for the experiment <b>3</b> temperature rise within 0.5°C of supervisor.	1	
			Award VI for the experiment <b>3</b> temperature rise within 1.0°C of supervisor.	1	[7]
	(b)	PDO Layout	<ul> <li>I Axes correct and labelled: temperature change/ T change/∆T and volume/vol/V (of) sodium hydroxide/NaOH/FA 1 and correct units /°C or (°C) or 'in °C'; /cm<sup>3</sup> or (cm<sup>3</sup>) (allow NaOH in cm<sup>3</sup>)</li> </ul>	1	
			II Scales chosen so that graph occupies at least half the available length for <i>x</i> - and <i>y</i> -axes.	1	
			III Plotting – all points accurate to within half a small square and in the correct square.	1	
			IV Draws two straight lines of best fit which intersect.	1	[4]
	(c)	ACE Interpretation	Reads to nearest $\frac{1}{2}$ square to 1 or 2 dp volume of <b>FA 1</b> and temperature rise from intercept. Do <b>not</b> award if $\Delta T$ at intercept (or point) < max $\Delta T$ from table unless candidate has clearly indicated the max $\Delta T$ is		[4]
			anomalous.		[1]

	GCE AS/A LEVEL – October/November 2011	9701	31	

(d)ACE ConclusionsIThe temperature/temperature change increases as more reaction/more hydrochloric acid/sodium hydroxide reacts/as more water formed.11IIThe temperature/temperature change stays constant/decreases when all acid/limiting reagent has reacted/excess NaOH is added.11(e)ACE InterpretationIVolume used in calculation is 65 cm³1[(f)ACE InterpretationIHeat energy change calculated using candidate's value for ΔT correct to 3 or 4 sf1[(g)ACE InterpretationICandidate's answer to (e) Candidate's answer to (f)1[(g)ACE InterpretationICorrect calculation, conversion J to kJ and negative sign to 3 or 4 sf1[(h)ACESo that rise in temperature is proportional to increase1[
IIThe temperature/temperature change stays constant/decreases when all acid/limiting reagent has reacted/excess NaOH is added.1(e)ACE InterpretationIVolume used in calculation is 65 cm³1(f)ACE InterpretationIIHeat energy change calculated using candidate's value for ΔT correct to 3 or 4 sf1(f)ACE Interpretation25 × 2 = 0.05 100011(g)ACE InterpretationICandidate's answer to (e) Candidate's answer to (f)1(g)ACE InterpretationICorrect calculation, conversion J to kJ and negative sign to 3 or 4 sf1(h)ACESo that rise in temperature is proportional to increase1
(e)ACE InterpretationIVolume used in calculation is 65 cm³1IIHeat energy change calculated using candidate's value for ΔT correct to 3 or 4 sf1(f)ACE Interpretation $\frac{25 \times 2}{1000}$ = 0.051(g)ACE InterpretationICandidate's answer to (e) Candidate's answer to (f)1PDO DisplayIICorrect calculation, conversion J to kJ and negative sign to 3 or 4 sf1(h)ACESo that rise in temperature is proportional to increase1
IIHeat energy change calculated using candidate's1(f)ACE Interpretation $\frac{25 \times 2}{1000}$ = 0.051(g)ACE InterpretationI $\frac{25 \times 2}{1000}$ = 0.051(g)ACE InterpretationICandidate's answer to (e) Candidate's answer to (f)1PDO DisplayIICorrect calculation, conversion J to kJ and negative sign to 3 or 4 sf1(h)ACESo that rise in temperature is proportional to increase1
(f)ACE Interpretation $\frac{25 \times 2}{1000}$ = 0.0511(g)ACE InterpretationICandidate's answer to (e) Candidate's answer to (f)1PDO DisplayIICorrect calculation, conversion J to kJ and negative sign to 3 or 4 sf1(h)ACESo that rise in temperature is proportional to increase1
(g)ACE InterpretationICandidate's answer to (e) Candidate's answer to (f)1PDO DisplayIICorrect calculation, conversion J to kJ and negative sign to 3 or 4 sf1(h)ACESo that rise in temperature is proportional to increase1
PDO DisplayII Correct calculation, conversion J to kJ and negative sign to 3 or 4 sf1(h)ACESo that rise in temperature is proportional to increase1
(h) ACE So that rise in temperature is proportional to increase 1
Conclusionsin energy produced/change in volume gives different change in temperature for same energy produced/ increase in volume requires increase in energy for same temperature rise.[
(i) PDO Display I Number moles NaOH = number moles HC <i>l</i> 1 (stated or clearly shown)
ACE II Calculates or expression for 1 Interpretation II Concentration = 0.05 (ecf from (f)) answer to (c)/1000 If answer only, award mark if correct to 3 or 4 sf [
(j) ACE Use more concentrated solutions. 1 Improvements Ignore all references to heat energy losses. [
(k)         ACE Conclusions         I         Two straight intersecting lines (positive followed by zero gradient).         1
II Same $\Delta T$ and V shown as in (b). 1 [

	GCE AS/A LEVEL – October/November 2011	9701	31	

	FA 3 is $Na_2S_2O_5(s)$ ; FA 4 is $Na_2CO_3(s)$ ; FA 5 is $Na_2SO_4(s)$ ; FA 6 is $Pb(NO_3)_2(s)$ and (aq)						
2	(a)	MMO Decisions	(i)	Ι	Any named mineral acid or formula or (acidified) potassium dichromate Do <b>not</b> allow any reagent suitable for testing cations or more than one reagent.	1	
		PDO Recording	(ii)	II	Tabulates evidence of 3 tests carried out with no repeat headings. <b>Only</b> consider observations with acid or dichromate.	1	
		MMO Collection		III	Bubbles/effervescence in <b>FA 4</b> .	1	
				IV	Slower effervescence in <b>FA 3</b> than <b>FA 4</b> or <b>FA 3</b> turns green <b>and FA 5</b> stays orange if dichromate used.	1	
		MMO Decisions		V	Appropriate test with positive result used to test for either gas.	1	
		ACE Conclusions		VI	All three ions correct from suitable observations. FA3 is a sulfite. FA4 is a carbonate. FA5 is a sulfate. (or correct formulae)	1	[6]
	(b)	MMO Collection	(i)	Ι	FA 4 + FA 6 white ppt and FA 5 + FA 6 white ppt.	1	
				II	<b>FA 6</b> + NaOH white ppt, soluble in excess sodium hydroxide.		
				III	Brown gas		
				IV	Gas relights glowing splint.		
				V	Yellow residue or crackling/decrepitating.		
		ACE Conclusions		VI	Gas identified as oxygen or as NO <sub>2</sub> from observations.		[6]
		ACE Conclusions	(ii)	Lea FA	ad/Pb <sup>2+</sup> provided correct observations with <b>FA 6</b> + NaOH <b>and</b> <b>6</b> + <b>FA 5</b> (sulfate).	1	[1]
		MMO Decisions	(iii)	Ι	Add HC1 / H <sub>2</sub> SO <sub>4</sub> / KI / K <sub>2</sub> CrO <sub>4</sub> / NH <sub>3</sub> *	1	
		MMO Collection		II	white ppt/white ppt/yellow ppt/yellow ppt/white ppt insoluble in excess.	1	
				* If allo NH Hov	not $Pb^{2+}$ in <b>(ii)</b> but one of $Al^{3+}$ , $Ba^{2+}$ , $Ca^{2+}$ , $Zn^{2+}$ ow suitable reagent mark: $K_2CrO_4$ for $Ba^{2+}$ and $_3$ for the other three. wever, observation must be correct for <b>Pb<sup>2+</sup></b> .		[2]
