

UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS General Certificate of Education

Advanced Subsidiary Level and Advanced Level

CHEMISTRY		9701/3
CENTRE NUMBER	CANDIDATE NUMBER	
CANDIDATE NAME		

Advanced Practical Skills May/June 2011

2 hours

Candidates answer on the Question Paper.

Additional Materials: As listed in the Instructions to Supervisors

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Give details of the practical session and laboratory where appropriate, in the boxes provided.

Write in dark blue or black pen.

You may use a soft pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

You may lose marks if you do not show your working or if you do not use appropriate units.

Use of a Data Booklet is unnecessary.

Qualitative Analysis Notes are printed on pages 11 and 12.

At the end of the examination, fasten all your work securely together. The number of marks is given in brackets [] at the end of each question or part question.

This document consists of 12 printed pages.

1 Many solid salts exist as hydrates. One example is washing soda – hydrated sodium carbonate, Na₂CO₃.**x**H₂O.

For Examiner's Use

You are to determine the value of **x** in Na₂CO₃.**x**H₂O by titration with hydrochloric acid.

FB 1 is hydrated sodium carbonate, $Na_2CO_3.xH_2O.$ **FB 2** is 0.200 mol dm⁻³ hydrochloric acid, HC *l.* methyl orange indicator

The equation for the reaction between hydrated sodium carbonate and hydrochloric acid is shown below.

$$\mathrm{Na_2CO_3.xH_2O} \ + \ 2\mathrm{HC}\mathit{l} \ \rightarrow \ 2\mathrm{NaC}\mathit{l} \ + \ \mathrm{CO_2} \ + \ (\mathrm{x} + \mathrm{1}) \ \mathrm{H_2O}$$

(a) Method

- Weigh the tube containing **FB 1**, the hydrated sodium carbonate. Record the mass in the space below.
- Add all the FB 1 into a 250 cm³ glass beaker. Reweigh the tube containing any residual FB 1. Record the mass in the space below.
- Calculate and record the mass of FB 1 used.

- Use the 50 cm³ measuring cylinder to add, in total, about 100 cm³ of distilled water to the beaker.
- Stir with a glass rod until all the solid has dissolved.
- Pour the solution from the beaker into the 250 cm³ graduated (volumetric) flask.
- Wash out the beaker thoroughly with distilled water and add the washings to the graduated flask.
- Make up the contents of the graduated flask to the 250 cm³ mark with distilled water.
- Shake the flask to mix the solution of FB 1.
- Pipette 25.0 cm³ of your solution of **FB 1** into a conical flask.
- Add to the flask a few drops of methyl orange indicator and place the flask on a white tile.
- Fill the burette with hydrochloric acid, FB 2.
- Titrate the solution of FB 1 with the acid until the end-point is reached.

	3	
	You should perform a rough titration . In the space below record your burette readings for this rough titration.	For Examiner's Use
	 Carry out as many accurate titrations as you think necessary to obtain consistent results. Make certain any recorded results show the precision of your practical work. Record, in an appropriate form below, all your burette readings and the volume of 	
	FB 2 added in each accurate titration.	I III IIV V VI
(b)	[7] From your accurate titration results, obtain a suitable value to be used in your calculations. Show clearly how you obtained this value.	VII
	25.0 cm ³ of FB 1 required cm ³ of FB 2 . [1]	

(c)	Calculations	ò
-----	--------------	---

For Examiner's Use

Show your working and appropriate significant figures in the final answer to **each** step of your calculations.

(i) Calculate how many moles of HCl were present in the volume of **FB 2** calculated in **(b)**.

..... mol of HC1

(ii) Calculate how many moles of ${\rm Na_2CO_3.xH_2O}$ were present in 25.0 cm 3 of the solution of **FB 1**.

$$\text{Na}_2\text{CO}_3.\mathbf{x}\text{H}_2\text{O} + 2\text{HC}l \rightarrow 2\text{NaC}l + \text{CO}_2 + (\mathbf{x} + 1)\text{H}_2\text{O}$$

..... mol of $\mathrm{Na_2CO_3}.\mathbf{x}\mathrm{H_2O}$

(iii) Calculate how many moles of Na₂CO₃.**x**H₂O were present in 250 cm³ of the solution of **FB 1**.

..... mol of $\mathrm{Na_2CO_3}.\mathbf{x}\mathrm{H_2O}$

(iv) Use the mass of **FB 1** that you weighed out to calculate the relative formula mass of Na₂CO₃.**x**H₂O.

I II III IV V VI

relative formula mass =

	(v)	Calculate the value of x in Na ₂ CO ₃ . x H ₂ O. [<i>A</i> _r : H, 1.0; C, 12.0; O, 16.0; Na, 23.0]	For Examiner's Use
		x =[6]	
(d)	The	error in a single burette reading is ±0.05 cm ³ .	
	Wh	at is the percentage error in the titre volume calculated in (b)?	
		percentage error = % [1]	
		[Total: 15]	

You are to determine the enthalpy change for the reaction of hydrated sodium carbonate, 2 Na₂CO₃.**x**H₂O, with hydrochloric acid, HC*l*(aq).

For Examiner's Use

The equation for this reaction is shown below.

$$Na_2CO_3.xH_2O(s) + 2HCl(aq) \rightarrow 2NaCl(aq) + CO_2(g) + (x + 1)H_2O(l)$$

FB 3 is hydrated sodium carbonate, Na_2CO_3 .**x** H_2O . **FB 4** is 4.00 mol dm⁻³ hydrochloric acid, HCl.

Make sure that in this experiment you use the hydrochloric acid labelled FA 4.

(a) Method

- Support the plastic cup in a 250 cm³ beaker.
- Use a measuring cylinder to transfer 25 cm³ of **FB 4** into the plastic cup.
- Tilt the beaker so that the bulb of the thermometer is covered by the solution.
- Measure and record the temperature of the solution.
- Measure and record the mass of the tube containing FB 3.
- Carefully tip all the hydrated sodium carbonate from the weighed tube into the plastic cup.
- There will be effervescence. Add the solid in small portions with constant stirring using the thermometer.
- Record the lowest temperature obtained.
- Reweigh the tube containing any residual FB 3.

In the space below, record, in an appropriate form,

- both balance readings,
- both temperature measurements,
- the mass of FB 3 used in the experiment,
- the fall in temperature.

Ι Π Ш IV V

[5]

(b) Calculation

Show your working and express your answers to **three** significant figures.

(i) Calculate the heat energy change involved in the reaction. (You may assume that 4.3J are required to change the temperature of 1.0 cm³ of any solution by 1.0°C.)

heat energy produced = J

	(ii)	Calculate the number of moles of $Na_2CO_3.xH_2O$ you used in 2(a) . You will need to use the relative formula mass you calculated in 1(c)(v) . If you were unable to calculate the relative formula mass in 1(c) , assume it is 259 but note that this is not the correct value.	For Examiner's Use
		mol of Na ₂ CO ₃ . x H ₂ O	
	(iii)	Calculate the enthalpy change, in kJ mol ⁻¹ , for the following reaction.	
	N	$a_2CO_3.xH_2O(s) + 2HCl(aq) \rightarrow 2NaCl(aq) + CO_2(g) + (x + 1)H_2O(l)$	
			I
			II
			III
			IV
		enthalpy change = kJ mol ⁻¹	
		sign value [4]	
(c)	suri	experiments carried out to determine enthalpy changes, heat transfer between the coundings and the reactants is a significant source of error. This problem can be ted by improved insulation.	
	imp	art from modifications made to minimise heat transfer, suggest one possible rovement you could make to the apparatus or procedure to make the determination he enthalpy change more accurate.	
		[1]	
		[Total: 10]	

For Examiner's Use

3 Qualitative Analysis

At each stage of any test you are to record details of the following.

- colour changes seen
- the formation of any precipitate
- the solubility of such precipitates in an excess of the reagent added

Where gases are released they should be identified by a test, **described in the appropriate** place in your observations.

You should indicate clearly at what stage in a test a change occurs.

Marks are **not** given for chemical equations.

No additional tests for ions present should be attempted.

If any solution is warmed, a boiling tube MUST be used.

Rinse and reuse test-tubes and boiling tubes where possible.

Where reagents are selected for use in a test, the full name or correct formula of the reagents must be given.

(a)	(i)	You are provided with three solutions FB 5, FB 6 and FB 7, each of which contains
	• •	a single cation. One of these cations is aluminium, one is magnesium and the other
		is lead

Use the information in the Qualitative Analysis Notes on page 11 to select reagents
that would enable you to determine the cation in FB 5, FB 6 and FB 7.

reagents	

Carry out suitable tests and record the results of your experiments in an appropriate form in the space below.

[4]

(ii) Complete the table below.

For
Examiner's
Use

	FB 5	FB 6	FB 7
cation			

What is the minimum evidence from your observations, that enables you to identify these cations?
The minimum evidence for the cation in FB 5 is
The minimum evidence for the cation in FB 6 is
The minimum evidence for the cation in FB 7 is
[4]

I	
II	
III	
IV	

(b) You are provided with solid FB 8.

Carry out the tests and complete the following table.

For Examiner's Use

	test	observations
(i)	To a spatula measure of FB 8 , in a test-tube, add about a 1 cm depth of distilled water to make a solution. To this solution add 4 pieces of magnesium ribbon.	
(ii)	To a small spatula measure of FB 8 , in a boiling tube, add 3 cm depth of aqueous sodium hydroxide. Warm gently and carefully.	
(iii)	To a spatula measure of FB 8 , in a test-tube, add about a 1 cm depth of distilled water to make a solution. To this solution add an equal volume of aqueous sodium hydroxide.	
	To this mixture add a small volume of hydrogen peroxide.	

I	
II	
III	
IV	
V	
VI	
VII	

Identify the metal ion present in **FB 8**.

metal ion =

[Total: 15]

Qualitative Analysis Notes

Key: [ppt. = precipitate.]

1 Reactions of aqueous cations

,	reaction with	
ion	NaOH(aq)	NH ₃ (aq)
aluminium, Al^{3+} (aq)	white ppt. soluble in excess	white ppt. insoluble in excess
ammonium, NH ₄ +(aq)	no ppt. ammonia produced on heating	_
barium, Ba ²⁺ (aq)	no ppt. (if reagents are pure)	no ppt.
calcium, Ca ²⁺ (aq)	white ppt. with high [Ca ²⁺ (aq)]	no ppt.
chromium(III), Cr ³⁺ (aq)	grey-green ppt. soluble in excess giving dark green solution	grey-green ppt. insoluble in excess
copper(II), Cu ²⁺ (aq)	pale blue ppt. insoluble in excess	blue ppt. soluble in excess giving dark blue solution
iron(II), Fe ²⁺ (aq)	green ppt. turning brown on contact with air insoluble in excess	green ppt. turning brown on contact with air insoluble in excess
iron(III), Fe ³⁺ (aq)	red-brown ppt. insoluble in excess	red-brown ppt. insoluble in excess
lead(II), Pb ²⁺ (aq)	white ppt. soluble in excess	white ppt. insoluble in excess
magnesium, Mg ²⁺ (aq)	white ppt. insoluble in excess	white ppt. insoluble in excess
manganese(II), Mn ²⁺ (aq)	off-white ppt. rapidly turning brown on contact with air insoluble in excess	off-white ppt. rapidly turning brown on contact with air insoluble in excess
zinc, Zn ²⁺ (aq)	white ppt. soluble in excess	white ppt. soluble in excess

[Lead(II) ions can be distinguished from aluminium ions by the insolubility of lead(II) chloride.]

2 Reactions of anions

ion	reaction
carbonate,	CO ₂ liberated by dilute acids
CO ₃ ²⁻	
chromato(VI)	yellow solution turns orange with H ⁺ (aq);
chromate(VI),	gives yellow ppt. with Ba ²⁺ (aq);
CrO ₄ ²⁻ (aq)	gives bright yellow ppt. with Pb ²⁺ (aq)
chloride,	gives white ppt. with Ag ⁺ (aq) (soluble in NH ₃ (aq));
Cl ⁻ (aq)	gives white ppt. with Pb ²⁺ (aq)
bromide,	gives cream ppt. with Ag+(aq) (partially soluble in NH ₃ (aq));
Br ⁻ (aq)	gives white ppt. with Pb ²⁺ (aq)
iodide,	gives yellow ppt. with Ag ⁺ (aq) (insoluble in NH ₃ (aq));
I ⁻ (aq)	gives yellow ppt. with Pb ²⁺ (aq)
nitrate,	NH ₃ liberated on heating with OH ⁻ (aq) and Al foil
NO ₃ ⁻ (aq)	
nitrite,	NH ₃ liberated on heating with OH ⁻ (aq) and Al foil;
NO ₂ ⁻ (aq)	NO liberated by dilute acids (colourless NO → (pale) brown NO ₂ in air)
sulfate,	gives white ppt. with Ba ²⁺ (aq) or with Pb ²⁺ (aq) (insoluble in excess dilute
SO ₄ ²⁻ (aq)	strong acids)
sulfite,	SO ₂ liberated with dilute acids;
SO ₃ ²⁻ (aq)	gives white ppt. with Ba ²⁺ (aq) (soluble in excess dilute strong acids)

3 Tests for gases

gas	test and test result
ammonia, NH ₃	turns damp red litmus paper blue
carbon dioxide, CO ₂	gives a white ppt. with limewater
	(ppt. dissolves with excess CO ₂)
chlorine, Cl ₂	bleaches damp litmus paper
hydrogen, H ₂	"pops" with a lighted splint
oxygen, O ₂	relights a glowing splint
sulfur dioxide, SO ₂	turns acidified aqueous potassium dichromate(VI) from orange to green
