CHEMISTRY 9701/34

Paper 3 Advanced Practical Skills 2

May/June 2023

2 hours

You must answer on the question paper.

You will need: The materials and apparatus listed in the confidential instructions

INSTRUCTIONS

- Answer all questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do not use an erasable pen or correction fluid.
- Do not write on any bar codes.
- You may use a calculator.
- You should show all your working and use appropriate units.

INFORMATION

- The total mark for this paper is 40.
- The number of marks for each question or part question is shown in brackets [].
- The Periodic Table is printed in the question paper.
- Important values, constants and standards are printed in the question paper.
- Notes for use in qualitative analysis are provided in the question paper.

This document has 12 pages.

Quantitative analysis

Read through the whole method before starting any practical work. Where appropriate, prepare a table for your results in the space provided.

Show the precision of the apparatus you used in the data you record.

Show your working and appropriate significant figures in the final answer to **each** step of your calculations.

You will investigate the enthalpy change of neutralisation, ΔH_{neut} , between aqueous sodium hydroxide of known concentration and a dilute organic acid. You will use your results to suggest the identity of the organic acid. The acid is a halogenocarboxylic acid containing one halogen atom, \mathbf{X} , per molecule.

NaOH(aq) +
$$CH_3CHXCOOH(aq) \rightarrow CH_3CHXCOONa(aq) + H_2O(I)$$

FB 1 is 1.90 mol dm⁻³ sodium hydroxide, NaOH.

FB 2 is a solution containing 312.5 g dm⁻³ of the organic acid CH₃CH**X**COOH.

(a) Method

- Support the cup in the 250 cm³ beaker.
- Pipette 25.0 cm³ of **FB 1** into the cup.
- Place the thermometer into **FB 1**. Record the temperature of **FB 1** in Table 1.1. This is the temperature when the volume of **FB 2** is 0.00 cm³.
- Fill the burette with **FB 2**.
- Run 5.00 cm³ of **FB 2** into the cup containing **FB 1**.
- Stir the mixture. Record the highest temperature observed.
- Run further 5.00 cm³ portions of **FB 2** into the same cup.
- On each addition of FB 2 stir the contents of the cup. Record the highest temperature after each addition.

| I | |
|-----|--|
| II | |
| III | |

Results

Table 1.1

| total volume of FB 2 added/cm ³ | 0.00 | 5.00 | 10.00 | 15.00 | 20.00 | 25.00 | 30.00 | 35.00 | 40.00 |
|--|------|------|-------|-------|-------|-------|-------|-------|-------|
| temperature /°C | | | | | | | | | |

[3]

(b) (i) Plot a graph of temperature (*y*-axis) against volume of **FB 2** added (*x*-axis) on the grid. Select a scale on the *y*-axis to include a temperature of 2°C above your maximum thermometer reading. Label any points you consider to be anomalous.

Draw two lines of best fit, the first for the increase in temperature and the second for after the maximum temperature has been reached. Extrapolate the two lines so they intersect. This intersection corresponds to the volume of **FB 2** required to form a neutral solution.

(ii) Use your graph to determine the volume of FB 2 required to neutralise $25.0\,\mathrm{cm}^3$ of FB 1.

25.0 cm³ of **FB 1** required cm³ of **FB 2**. [1]

4

| (i) | Calculate the energy change, in J, when the volume of FB 2 recorded in (b)(ii) neutralises 25.0 cm ³ of FB 1 . |
|-------|---|
| (ii) | $energy\ change =\ J\ [1]$ Calculate the amount, in mol, of sodium hydroxide, FB 1 , pipetted into the cup. |
| (iii) | amount of NaOH = |
| (iv) | $\Delta H_{\rm neut} = \text{ kJ mol}^{-1} \ [1]$ Use your answers to (b)(ii) and (c)(ii) and the information given on page 2 to calculate the relative formula mass, $M_{\rm r}$, of the organic acid CH ₃ CHXCOOH. Show your working. |
| (v) | $M_{\rm r} \ {\rm of} \ {\rm CH_3CHXCOOH} =$ |
| (vi) | The acid in FB 2 is |
| | [Total: 14] |

2 A gravimetric procedure can identify the metal in many metal carbonates. You will decompose a metal carbonate, MCO₃, by heating to produce the metal oxide and carbon dioxide. You may assume this metal forms a stable metal oxide on heating. M is **not** a transition metal.

$$MCO_3(s) \rightarrow MO(s) + CO_2(g)$$

FB 3 is the metal carbonate MCO₃.

(a) Method

- Weigh the crucible with its lid. Record the mass.
- Add between 0.90 g and 1.10 g of **FB 3** to the crucible.
- Weigh the crucible, lid and **FB 3**. Record the mass.
- Place the crucible on the pipe-clay triangle.
- Gently heat the crucible and contents for approximately 1 minute with the lid on.
- Remove the lid. Then heat the crucible and contents strongly for approximately 5 minutes.
- Replace the lid and leave the crucible to cool for at least 5 minutes.

While the crucible is cooling, you may wish to begin work on Question 3.

- When the crucible is cool, weigh the crucible with its lid and contents. Record the mass.
- Calculate and record the mass of **FB 3** added to the crucible, the mass of residue obtained and the mass loss.

Keep the residue for use in 2(d).

| | test | | |
| | | ervation | |
| | con | clusion[2 | <u>'</u>] |

[Total: 11]

Qualitative analysis

For each test you should record **all** your observations in the spaces provided.

Examples of observations include:

- colour changes seen
- the formation of any precipitate and its solubility (where appropriate) in an excess of the reagent added
- the formation of any gas and its identification (where appropriate) by a suitable test.

You should record clearly at what stage in a test an observation is made.

Where no change is observed you should write 'no change'.

Where reagents are selected for use in a test, the name or correct formula of the element or compound must be given.

If any solution is warmed, a boiling tube must be used.

Rinse and reuse test-tubes and boiling tubes where possible.

No additional tests should be attempted.

- 3 Half fill the 250 cm³ beaker with water and place it on a gauze on the tripod. Heat the water until boiling then switch off your Bunsen burner. This will be your hot water bath.
 - (a) FB 4, FB 5 and FB 6 are acids with the same concentration. Only one is an organic acid.
 - (i) Carry out the following tests and record your observations in Table 3.1. Use a 1 cm depth of **FB 4**, **FB 5** or **FB 6** in a test-tube for each test.

Table 3.1

| toot | observations | | | | | |
|---|------------------------|-------------------------|----------|--|--|--|
| test | FB 4 | FB 5 | FB 6 | | | |
| Test 1 Add 1 or 2 drops of acidified aqueous potassium manganate(VII), then | | | | | | |
| place the test-tube in the hot water bath. | | | | | | |
| Test 2 Add a few copper turnings and place the test-tube in the hot water bath for a few minutes. | | | | | | |
| Test 3 Add a 1 cm strip of magnesium ribbon, then | | | | | | |
| leave the test-tube for 3 minutes and then shake the test-tube gently. | | | | | | |
| At the en | d of the experiments r | inse the test-tubes tho | roughly. | | | |

[7]

| | (ii) | Each of FB 4 , FB 5 and FB 6 is one of the following acids: methanoic acid, nitric acid or sulfuric acid. Use your observations to suggest the identity of each acid. Explain your answers. |
|-----|------|--|
| | | FB 4 is |
| | | explanation |
| | | |
| | | FB 5 is |
| | | explanation |
| | | |
| | | FB 6 is |
| | | explanation |
| | | [3] |
| (b) | | halogenocarboxylic acid in FB 2 was hydrolysed by heating with excess aqueous sodium roxide. The resulting solution is FB 7 . |
| | (i) | Carry out a test to check the identity of the halogen atom present in FB 2 . Use a 1 cm depth of FB 7 in a test-tube for your test. State your reagents and record your observations at each stage of your test. |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | From this test only , give the identity of the halogen present in FB 2 . |
| | | The halogen is |
| | (ii) | Give the equation for the hydrolysis reaction of the halogenocarboxylic acid, FB 2 , with excess hot aqueous sodium hydroxide. |
| | | (If you were unable to identify the halogen in (b)(i) , then use the formula CH ₃ CH X COOH.) |
| | | [2] |
| | | [Total: 15] |

Qualitative analysis notes

1 Reactions of cations

| cation | reaction with | | | | |
|--------------------------------------|--|--|--|--|--|
| | NaOH(aq) | NH ₃ (aq) | | | |
| aluminium, Al 3+(aq) | white ppt. soluble in excess | white ppt. insoluble in excess | | | |
| ammonium, NH ₄ +(aq) | no ppt. ammonia produced on warming | _ | | | |
| barium, Ba ²⁺ (aq) | faint white ppt. is observed unless [Ba ²⁺ (aq)] is very low | no ppt. | | | |
| calcium, Ca ²⁺ (aq) | white ppt. unless [Ca ²⁺ (aq)] is very low | no ppt. | | | |
| chromium(III), Cr ³⁺ (aq) | grey-green ppt. soluble in excess giving dark green solution | grey-green ppt. insoluble in excess | | | |
| copper(II), Cu ²⁺ (aq) | pale blue ppt. insoluble in excess | pale blue ppt. soluble in excess giving dark blue solution | | | |
| iron(II), Fe ²⁺ (aq) | green ppt. turning brown on contact with air insoluble in excess | green ppt. turning brown on contact with air insoluble in excess | | | |
| iron(III), Fe ³⁺ (aq) | red-brown ppt. insoluble in excess | red-brown ppt. insoluble in excess | | | |
| magnesium, Mg ²⁺ (aq) | white ppt. insoluble in excess | white ppt. insoluble in excess | | | |
| manganese(II), Mn ²⁺ (aq) | off-white ppt. rapidly turning brown on contact with air insoluble in excess | off-white ppt. rapidly turning brown on contact with air insoluble in excess | | | |
| zinc, Zn ²⁺ (aq) | white ppt. soluble in excess | white ppt. soluble in excess | | | |

2 Reactions of anions

| anion | reaction | | | | | | |
|---|---|--|--|--|--|--|--|
| carbonate, CO ₃ ²⁻ | CO ₂ liberated by dilute acids | | | | | | |
| chloride, Cl ⁻ (aq) | gives white ppt. with Ag ⁺ (aq) (soluble in NH ₃ (aq)) | | | | | | |
| bromide, Br -(aq) | gives cream/off-white ppt. with Ag+(aq) (partially soluble in NH ₃ (aq)) | | | | | | |
| iodide, I-(aq) | gives pale yellow ppt. with Ag ⁺ (aq) (insoluble in NH ₃ (aq)) | | | | | | |
| nitrate, NO ₃ ⁻ (aq) | NH ₃ liberated on heating with OH ⁻ (aq) and A <i>l</i> foil | | | | | | |
| nitrite, NO ₂ ⁻ (aq) | NH ₃ liberated on heating with OH ⁻ (aq) and A <i>l</i> foil; decolourises acidified aqueous KMnO ₄ | | | | | | |
| sulfate, SO ₄ ²⁻ (aq) | gives white ppt. with Ba ²⁺ (aq) (insoluble in excess dilute strong acids); gives white ppt. with high [Ca ²⁺ (aq)] | | | | | | |
| sulfite, SO ₃ ²⁻ (aq) | gives white ppt. with Ba ²⁺ (aq) (soluble in excess dilute strong acids); decolourises acidified aqueous KMnO ₄ | | | | | | |
| thiosulfate, S ₂ O ₃ ²⁻ (aq) | gives off-white/pale yellow ppt. slowly with H+ | | | | | | |

3 Tests for gases

| gas | test and test result |
|---------------------------------|-----------------------------------|
| ammonia, NH ₃ | turns damp red litmus paper blue |
| carbon dioxide, CO ₂ | gives a white ppt. with limewater |
| hydrogen, H ₂ | 'pops' with a lighted splint |
| oxygen, O ₂ | relights a glowing splint |

4 Tests for elements

| element | test and test result |
|------------------------|--|
| iodine, I ₂ | gives blue-black colour on addition of starch solution |

Important values, constants and standards

| molar gas constant | $R = 8.31 \mathrm{J}\mathrm{K}^{-1}\mathrm{mol}^{-1}$ |
|---------------------------------|---|
| Faraday constant | $F = 9.65 \times 10^4 \mathrm{C}\mathrm{mol}^{-1}$ |
| Avogadro constant | $L = 6.022 \times 10^{23} \text{mol}^{-1}$ |
| electronic charge | $e = -1.60 \times 10^{-19} \mathrm{C}$ |
| molar volume of gas | $V_{\rm m} = 22.4 {\rm dm^3 mol^{-1}}$ at s.t.p. (101 kPa and 273 K) $V_{\rm m} = 24.0 {\rm dm^3 mol^{-1}}$ at room conditions |
| ionic product of water | $K_{\rm w} = 1.00 \times 10^{-14} \rm mol^2 dm^{-6} (at 298 \rm K (25 ^{\circ} C))$ |
| specific heat capacity of water | $c = 4.18 \mathrm{kJ kg^{-1} K^{-1}} (4.18 \mathrm{J g^{-1} K^{-1}})$ |
