

UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS General Certificate of Education Advanced Level

CHEMISTRY Paper 4 Structo	ured Questions		9701/41 May/June 2011 2 hours
CENTRE NUMBER		CANDIDATE NUMBER	
CANDIDATE NAME			

Candidates answer on the Question Paper.

Additional Materials: Data Booklet

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Section A Answer all questions. Section B Answer all questions. You may lose marks if you do not show your working or if you do not use appropriate units. A Data Booklet is provided. At the end of the examination, fasten all your work securely together. The number of marks is given in brackets [] at the end of each question or part question.

This document consists of 18 printed pages and 2 blank pages.

For Examiner's Use

Section A

Answer **all** questions in the spaces provided.

- 1 Taken together, nitrogen and oxygen make up 99% of the air. Oxygen is by far the more reactive of the two gases, and most of the substances that react with air combine with the oxygen rather than with the nitrogen.
 - (a) State one reason why the molecule of nitrogen, N_2 , is so unreactive.

.....[1]

Despite the apparent lack of reactivity of N_2 , nitrogen atoms have been found to form bonds with almost all of the elements in the Periodic Table. Lithium metal reacts with nitrogen gas at room temperature to give lithium nitride, Li₃N. Magnesium produces magnesium nitride, Mg₃N₂, as well as magnesium oxide, when heated in air.

(b) Calculate the lattice energy of magnesium nitride using the following data, in addition to relevant data from the *Data Booklet*.

enthalpy change	value/kJ mol ⁻¹
atomisation of Mg(s)	+148
total of electron affinities for the change $N(g) \rightarrow N^{3-}(g)$	+2148
enthalpy of formation of $Mg_3N_2(s)$	-461

lattice energy =kJ mol⁻¹ [3]

(c) Lithium reacts readily with nitrogen, and because of this Li₃N has been considered as a possible intermediate in the 'fixing' of nitrogen to make ammonia-based fertilisers.

 $N_2(g) \xrightarrow{+ Li} Li_3N \xrightarrow{+ H_2O} NH_3 + A$

(i) Construct an equation for the reaction between Li₃N and H₂O, and hence identify compound **A**.

.....

(ii) Using your knowledge of the Haber process, consider one advantage and one disadvantage of using lithium as a means of fixing nitrogen, rather than the Haber process.

advantage of the lithium method

.....

disadvantage of the lithium method

[3]

- (d) Another possible advantage of Li_3N is that it contains a large percentage by mass of nitrogen. Another fertiliser that contains a large percentage by mass of nitrogen is urea, NH_2CONH_2 .
 - (i) Calculate and compare the percentages by mass of nitrogen in $\rm Li_3N$ and $\rm NH_2CONH_2.$

.....

.....

.....

(ii) What class of organic compound is urea?

.....

(iii) Write an equation for the production of ammonia by the reaction between urea and water.

.....

(iv) Urea can be applied directly to the soil either before or during the growing of crops.

What would be a major disadvantage of using lithium nitride in this way?

.....

.....

[5]

[Total: 12]

(a)			Fo Exam 1 Is
	(1)	reversible reaction	
	(ii)	dynamic equilibrium	
		[2]	
(d)	vva	ter ionises to a small extent as ionows.	
	(i)	Write an expression for K_c for this reaction.	
	(ii)	Write down the expression for K_w , the ionic product of water, and explain how this can be derived from your K_c expression in (i) .	
	(iii)	State and explain how the value of $K_{\rm w}$ for hot water will differ from its value for cold water.	
		[3]	
(c)	K _w o	can be used to calculate the pH of solutions of strong and weak bases.	
	(i)	Use the value of $K_{\rm w}$ in the Data Booklet to calculate the pH of 0.050 moldm ⁻³ NaOH.	
		pH =	
		Ammonia ionises slightly in water as follows.	
		$NH_3(aq) + H_2O(I) \rightleftharpoons NH_4^+(aq) + OH^-(aq)$	
		The following expression applies to this equilibrium.	
		$[H, O] \dots K = [N[H, \pm](O[\pm])/[N[H, 1] = 1.8 \dots 10^{-5} moldm^{-3}]$	

(ii)	Calculate $[OH^-(aq)]$ in a 0.050 mol dm ⁻³ solution of NH ₃ . You may assume that only a small fraction of the NH ₃ ionises, so that $[NH_3]$ at equilibrium remains at 0.050 mol dm ⁻³ .	For Examiner's Use
	[OH ⁻ (aq)] =	
(iii)	Use the value of K_w in the <i>Data Booklet</i> , and your answer in (ii) , to calculate [H ⁺ (aq)] in 0.050 mol dm ⁻³ NH ₃ (aq).	
	[H+(aq)] =	
(iv)	Calculate the pH of this solution.	
	pH =[6]	
	[Total: 11]	

(a) (1	State and explain the variation in the oxidation numbers of the chlorides of the elements Na, Mg, Al and Si.				
		[2]			
(b) [t	Des the r	cribe the reaction of phosphorus(V) chloride with water, and write an equation for reaction.			
(c) \ F E	Whe pres B cc appr	en microwave radiation is passed through phosphorus(III) chloride, PCl_3 , at low sure, a new chloride of phosphorus, B , is formed. Pontains 69.6% by mass of chlorine and 30.4% by mass of phosphorus, and its M_r is roximately 200.			
((i)	Calculate the empirical and molecular formulae of B .			
(i	ii)	Assuming phosphorus and chlorine show their typical valencies, draw the displayed formula of B , showing all bonds and lone pairs.			
(ii	ii)	Calculate the oxidation number of phosphorus in B .			
(i)	v)	One mole of B reacts with four moles of water. Suggest the structure of the phosphorus-containing product of this reaction.			
		[6]			
		[Total: 10]			

BLANK PAGE

(i) How is the NO ₂ removed from the exhaust gases of motor vehicles? (ii) Write an equation for this process. (ii) Write an equation for this process. (iii) Write an equation for this process. (iii) Write an equation of the pollutant NO ₂ would be reduced if fossil fuel were replaced by hydrogen as a fuel for combustion. Explain your answer. (iii) In the atmosphere, NO ₂ acts as a catalyst for the oxidation of SO ₂ to SO ₃ . SO ₂ (g) + ½ O ₂ (g) $\xrightarrow{NO_2}$ SO ₃ (g) (i) What is the environmental significance of this reaction? The oxidation takes place in two steps. The initial reaction is that between NO ₂ and SO ₂ . <i>reaction</i> 1 NO ₂ (g) + SO ₂ (g) \rightleftharpoons NO(g) + SO ₃ (g) $\Delta H = -168$ kJ mol ⁻¹ (ii) Write an equation to show how the NO ₂ is regenerated in the second step of the oxidation. (iii) Write an expression for the equilibrium constant, K_p for <i>reaction</i> 1, stating its units $K_p =$ units	a) Writ	rite an equation to show how NO ₂ is formed in these situations.
(b) (i) How is the NO ₂ removed from the exhaust gases of motor vehicles? (ii) Write an equation for this process. (iii) Write an equation for this process. (iii) Write an equation for this process. (iii) Write an equation for the pollutant NO ₂ would be reduced if fossil fuel were replaced by hydrogen as a fuel for combustion. Explain your answer. (iii) In the atmosphere, NO ₂ acts as a catalyst for the oxidation of SO ₂ to SO ₃ . $SO_2(g) + \frac{NO_2}{2} O_2(g) \xrightarrow{NO_2} SO_3(g)$ (i) What is the environmental significance of this reaction? The oxidation takes place in two steps. The initial reaction is that between NO ₂ and SO ₂ . <i>reaction</i> 1 NO ₂ (g) + SO ₂ (g) \rightleftharpoons NO(g) + SO ₃ (g) $\Delta H = -168$ kJ mol ⁻¹ (ii) Write an equation to show how the NO ₂ is regenerated in the second step of the oxidation. (iii) Write an expression for the equilibrium constant, K_p for <i>reaction</i> 1, stating its units $K_p =$ units		[1
(ii) Write an equation for this process. [2 (c) Suggest whether the production of the pollutant NO ₂ would be reduced if fossil fuel were replaced by hydrogen as a fuel for combustion. Explain your answer. [1 (d) In the atmosphere, NO ₂ acts as a catalyst for the oxidation of SO ₂ to SO ₃ . $SO_2(g) + \frac{1}{2}O_2(g) \xrightarrow{NO_2} SO_3(g)$ (i) What is the environmental significance of this reaction? The oxidation takes place in two steps. The initial reaction is that between NO ₂ and SO ₂ . reaction 1 NO ₂ (g) + SO ₂ (g) $\rightleftharpoons NO(g) + SO_3(g) \qquad \Delta H = -168 \text{ kJ mol}^{-1}$ (ii) Write an equation to show how the NO ₂ is regenerated in the second step of the oxidation. (iii) Write an expression for the equilibrium constant, K_p for <i>reaction</i> 1, stating its units $K_p =$ units	b) (i)	How is the NO_2 removed from the exhaust gases of motor vehicles?
[2 (c) Suggest whether the production of the pollutant NO ₂ would be reduced if fossil fuel were replaced by hydrogen as a fuel for combustion. Explain your answer. [1] (d) In the atmosphere, NO ₂ acts as a catalyst for the oxidation of SO ₂ to SO ₃ . $SO_2(g) + \frac{1}{2}O_2(g) \xrightarrow{NO_2} SO_3(g)$ (i) What is the environmental significance of this reaction? The oxidation takes place in two steps. The initial reaction is that between NO ₂ and SO ₂ . <i>reaction 1</i> NO ₂ (g) + SO ₂ (g) \rightleftharpoons NO(g) + SO ₃ (g) $\Delta H = -168$ kJmol ⁻¹ (ii) Write an equation to show how the NO ₂ is regenerated in the second step of the oxidation. (iii) Write an expression for the equilibrium constant, K_p for <i>reaction 1</i> , stating its units $K_p =$ units (iv) If equal amounts of NO ₂ (g) and SO ₂ (g) are allowed to react at room temperature, is found that 99.8% of the gases have been converted into products at equilibrium Calculate a value for K_p .	(ii)	Write an equation for this process.
 (c) Suggest whether the production of the pollutant NO₂ would be reduced if fossil fuel were replaced by hydrogen as a fuel for combustion. Explain your answer. [1] (d) In the atmosphere, NO₂ acts as a catalyst for the oxidation of SO₂ to SO₃. SO₂(g) + ½ O₂(g) → SO₃(g) (i) What is the environmental significance of this reaction? The oxidation takes place in two steps. The initial reaction is that between NO₂ and SO₂. <i>reaction 1</i> NO₂(g) + SO₂(g) ⇒ NO(g) + SO₃(g) △H = -168 kJmol⁻¹ (ii) Write an equation to show how the NO₂ is regenerated in the second step of the oxidation. (iii) Write an expression for the equilibrium constant, K_p for <i>reaction 1</i>, stating its units K_p = units (iv) If equal amounts of NO₂(g) and SO₂(g) are allowed to react at room temperature, is found that 99.8% of the gases have been converted into products at equilibrium Calculate a value for K_p. 		[2
 (d) In the atmosphere, NO₂ acts as a catalyst for the oxidation of SO₂ to SO₃. SO₂(g) + ½ O₂(g) → SO₃(g) (i) What is the environmental significance of this reaction? The oxidation takes place in two steps. The initial reaction is that between NO₂ and SO₂. <i>reaction</i> 1 NO₂(g) + SO₂(g) ⇒ NO(g) + SO₃(g) ΔH = -168 kJ mol⁻¹ (ii) Write an equation to show how the NO₂ is regenerated in the second step of the oxidation. (iii) Write an expression for the equilibrium constant, <i>K_p</i> for <i>reaction</i> 1, stating its units <i>K_p</i> = units (iv) If equal amounts of NO₂(g) and SO₂(g) are allowed to react at room temperature, is found that 99.8% of the gases have been converted into products at equilibrium Calculate a value for <i>K_p</i>. 	c) Sug wer	Iggest whether the production of the pollutant NO ₂ would be reduced if fossil fuel are replaced by hydrogen as a fuel for combustion. Explain your answer.
 (d) In the atmosphere, NO₂ acts as a catalyst for the oxidation of SO₂ to SO₃. SO₂(g) + ½ O₂(g) → SO₃(g) (i) What is the environmental significance of this reaction? The oxidation takes place in two steps. The initial reaction is that between NO₂ and SO₂. <i>reaction</i> 1 NO₂(g) + SO₂(g) ⇒ NO(g) + SO₃(g) ΔH = -168 kJ mol⁻¹ (ii) Write an equation to show how the NO₂ is regenerated in the second step of the oxidation. (iii) Write an expression for the equilibrium constant, <i>K_p</i> for <i>reaction</i> 1, stating its units <i>K_p</i> = units (iv) If equal amounts of NO₂(g) and SO₂(g) are allowed to react at room temperature, is found that 99.8% of the gases have been converted into products at equilibrium Calculate a value for <i>K_p</i>. 		[1
$SO_{2}(g) + \frac{1}{2}O_{2}(g) \xrightarrow{NO_{2}} SO_{3}(g)$ (i) What is the environmental significance of this reaction? The oxidation takes place in two steps. The initial reaction is that between NO ₂ and SO ₂ . <i>reaction 1</i> NO ₂ (g) + SO ₂ (g) \rightleftharpoons NO(g) + SO ₃ (g) $\Delta H = -168 \text{ kJ mol}^{-1}$ (ii) Write an equation to show how the NO ₂ is regenerated in the second step of the oxidation. (iii) Write an expression for the equilibrium constant, K_{p} for <i>reaction 1</i> , stating its units $K_{p} =$ units	d) In th	the atmosphere, NO_2 acts as a catalyst for the oxidation of SO_2 to SO_3 .
 (i) What is the environmental significance of this reaction? The oxidation takes place in two steps. The initial reaction is that between NO₂ and SO₂. <i>reaction 1</i> NO₂(g) + SO₂(g) ← NO(g) + SO₃(g) ΔH = −168 kJ mol⁻¹ (ii) Write an equation to show how the NO₂ is regenerated in the second step of the oxidation. (iii) Write an expression for the equilibrium constant, <i>K_p</i> for <i>reaction 1</i>, stating its units <i>K_p</i> = units (iv) If equal amounts of NO₂(g) and SO₂(g) are allowed to react at room temperature, is found that 99.8% of the gases have been converted into products at equilibrium Calculate a value for <i>K_p</i>. 		$SO_2(g) + \frac{1}{2}O_2(g) \xrightarrow{NO_2} SO_3(g)$
The oxidation takes place in two steps. The initial reaction is that between NO ₂ and SO ₂ . <i>reaction 1</i> NO ₂ (g) + SO ₂ (g) \rightleftharpoons NO(g) + SO ₃ (g) $\Delta H = -168$ kJ mol ⁻¹ (ii) Write an equation to show how the NO ₂ is regenerated in the second step of the oxidation. (iii) Write an expression for the equilibrium constant, K_p for <i>reaction 1</i> , stating its units $K_p =$ units (iv) If equal amounts of NO ₂ (g) and SO ₂ (g) are allowed to react at room temperature, is found that 99.8% of the gases have been converted into products at equilibrium Calculate a value for K_p .	(i)	What is the environmental significance of this reaction?
The oxidation takes place in two steps. The initial reaction is that between NO ₂ and SO ₂ . <i>reaction 1</i> NO ₂ (g) + SO ₂ (g) \rightleftharpoons NO(g) + SO ₃ (g) $\Delta H = -168 \text{ kJ mol}^{-1}$ (ii) Write an equation to show how the NO ₂ is regenerated in the second step of the oxidation. (iii) Write an expression for the equilibrium constant, K_p for <i>reaction 1</i> , stating its units $K_p =$ (iv) If equal amounts of NO ₂ (g) and SO ₂ (g) are allowed to react at room temperature, is found that 99.8% of the gases have been converted into products at equilibrium Calculate a value for K_p .		
<i>reaction</i> 1 NO ₂ (g) + SO ₂ (g) \rightleftharpoons NO(g) + SO ₃ (g) $\Delta H = -168 \text{ kJ mol}^{-1}$ (ii) Write an equation to show how the NO ₂ is regenerated in the second step of the oxidation. (iii) Write an expression for the equilibrium constant, K_p for <i>reaction</i> 1, stating its units $K_p =$ units (iv) If equal amounts of NO ₂ (g) and SO ₂ (g) are allowed to react at room temperature, is found that 99.8% of the gases have been converted into products at equilibrium Calculate a value for K_p .	The o	oxidation takes place in two steps. The initial reaction is that between NO_2 and SO_2 .

K_ =		

(v)	The temperature of the atmosphere decreases with height. How will this affect the position of the equilibrium in <i>reaction 1</i> ? Explain your answer.	For Examiner's Use
	[7]	
	[Total: 11]	

5 (a) There are several ways of introducing chlorine atoms into organic molecules. State the reagents and conditions necessary to carry out the following transformations.

For Examiner's Use

transformation	reagents + conditions
$C_2H_4 \longrightarrow C_2H_5Cl$	
$C_2H_5OH \longrightarrow C_2H_5Cl$	
$C_2H_6 \longrightarrow C_2H_5Cl$	
$C_2H_4 \longrightarrow C_2H_4Cl_2$	
CH ₃ CO ₂ H → CH ₃ COC <i>l</i>	
$CH_3 \rightarrow Cl - CH_3$	
$CH_3 \longrightarrow CH_2Cl$	
	[6]

(b) (i) When treated with concentrated HNO₃ + H₂SO₄ at 55 °C, benzene produces nitrobenzene.
 Outline the mechanism of this reaction. You should include all charges, and use curly arrows to represent the movement of electron pairs.

In aromatic substitution of monosubstituted benzenes, the orientation of an incoming For group depends on the nature of the group already attached to the ring. For example, using the same reagents and conditions as in (i), methylbenzene and benzoic acid produce the following nitro compounds.

Examiner's Use

(ii) Using this information as an aid, suggest a structure for compound C in the following synthesis of 3-bromobenzoic acid.

(iii) Suggest reagents and conditions for steps 1 and 2.

step 1	step 2

[6]

[Total: 12]

- 6 (a) The reaction producing tri-iodomethane (iodoform) can be used as a test for the presence of certain groups within a molecule.
 - (i) State the reagents and conditions used for this reaction.

(ii) Write the structural formula of **one** functional group that would give a positive result with this iodoform reaction.

.....

(iii) What do you observe in a positive test?

.....

(iv) In the following table place a tick (✓) in the column against each compound that would give a positive result with this test, and a cross (✗) against each compound that would give a negative result.

compound	result
СН ₃ ОН	
CH ₃ CH ₂ OH	
CH ₃ CHO	
CH ₃ CO ₂ H	
СНО	

[6]

(b) The iodoform test can be used, along with other reactions, to work out the structures of unknown compounds.

Use the information in the table below to deduce the structures of the compounds in the following scheme, and draw these structures in the boxes provided.

$$C_7H_{12}O \xrightarrow{\text{hot concentrated acidified KMnO_4}} C_7H_{6}O + C_4H_6O_3 \xrightarrow{\text{E}} F$$

Results of tests (/ indicates a positive result; / indicates a negative result)

toot	results of tests with each compound			
lesi	D	Е	F	
iodoform	×	1	1	
Fehling's solution	1	×	X	
2,4-dinitrophenyl- hydrazine reagent	1	√	1	
Na ₂ CO ₃ (aq)	×	X	1	

structures

- [3]
- (c) Treatment of compound **F** with NaBH₄ gives compound **G**, C₄H₈O₃. Heating **G** with Al₂O₃ gives a mixture of three isomeric unsaturated carboxylic acids **H**, **J** and **K**, C₄H₆O₂, two of which are stereoisomers of each other.

Suggest structures for **G**, **H**, **J**, and **K**, and name the type of stereoisomerism shown.

For Examiner's Use

Section B

Answer **all** questions in the spaces provided.

- 7 Enzymes are a special group of protein molecules present in large amounts in living organisms. Enzymes behave as catalysts but, unlike inorganic catalysts, they generally catalyse only one particular reaction.
 - (a) Inorganic catalysts often work better on heating, but enzymes rarely work at temperatures much above 45°C. Explain why this is the case.

(b) Using the shape below to represent an enzyme, sketch how an enzyme is specific to the breakdown of a particular substrate molecule

enzyme + substrate

enzyme-substrate complex

enzyme + products

[3]

(c) Describe the effects of a competitive, and of a non-competitive inhibitor on the interaction For between enzyme and substrate. Examiner's Use[2] The diagram shown illustrates an enzyme-catalysed reaction. On the diagram (d) (i) sketch the graph that would be obtained if the same reaction was carried out in the presence of a **non-competitive** inhibitor. initial reaction rate/mol dm⁻³ s⁻¹ concentration of substrate/mol dm⁻³ (ii) Explain why a non-competitive inhibitor has this effect on the reaction. [3] [Total: 10]

- 8 Chromatography is an important analytical technique in chemistry. There is a number of techniques under the general heading of chromatography.
 - (a) Paper and gas chromatography rely on partition to separate the components in a mixture, whereas thin-layer chromatography uses adsorption.

Explain what is meant by (i) *partition* and (ii) *adsorption*, in the context of chromatography.

- (b) In paper or thin-layer chromatography, better separation may be achieved by running the chromatogram in one solvent, then turning the paper at right angles and running it in a second solvent. The chromatogram below was produced in this way.

- (i) Ring the spot which was insoluble in solvent 1.
- (ii) Label as A and B the spots which were not resolved using solvent 1.

[2]

(c) The mass spectrum shown was obtained from a compound of formula C_pH_qX , where $X_{Examiner's}$

ln Th po	today nis inc olymer	's world, many traditional materials have been replaced by different sorts of polymers. Iudes rigid polymers such as those used in car bodies to replace steel and flexible is like those used in textiles to replace cotton or wool.	For Examine Use
(a)) (i)	To form a polymer, what is the minimum number of functional groups that the monomer must possess?	
	(ii)	Illustrate your answer to (i) with the structure of a possible monomer.	
		[2]	
/h	۰ ۰	to two differences between addition and condenaction not merication	
(D)) 31a	te two differences between addition and condensation polymensation.	
	(i)		
	(ii)		
		[2]	
(c)) The as	e polymer formed from the co-polymerisation of the two monomers shown is known <i>Terylene.</i>	
		$C \longrightarrow C \qquad H_2C \longrightarrow CH_2$	
		O' OH HO	
		benzene-1, 4-dicarboxylic acid ethane-1-2-diol	
	(i)	The two monomers react by condensation polymerisation. What other molecule is formed in this reaction?	

For Examiner's Use

(ii) Draw the structure of **one** repeat unit of *Terylene*.

(iii) What is the name given to polymers containing the same functional group as *Terylene*?
 [4]
 (d) The monomers ethene and but-1-ene can also co-polymerise to form a polyalkene, but this does not produce a regular alternating structure like *Terylene*. Explain why this is the case, drawing diagrams if you wish.
