

Mark Scheme (Results)

January 2021

Pearson Edexcel International Advanced Level In Chemistry (WCH14) Paper 1: Rates, Equilibria and Further Organic Chemistry

Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at <u>www.edexcel.com</u> or <u>www.btec.co.uk</u>. Alternatively, you can get in touch with us using the details on our contact us page at <u>www.edexcel.com/contactus</u>.

Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

Using the mark scheme

Examiners should look for qualities to reward rather than faults to penalise. This does NOT mean giving credit for incorrect or inadequate answers, but it does mean allowing candidates to be rewarded for answers showing correct application of principles and knowledge. Examiners should therefore read carefully and consider every response: even if it is not what is expected it may be worthy of credit.

The mark scheme gives examiners:

- an idea of the types of response expected
- how individual marks are to be awarded
- the total mark for each question
- examples of responses that should NOT receive credit.

/ means that the responses are alternatives and either answer should receive full credit. () means that a phrase/word is not essential for the award of the mark, but helps the examiner to get the sense of the expected answer.

Phrases/words in **bold** indicate that the meaning of the phrase or the actual word is **essential** to the answer. ecf/TE/cq (error carried forward) means that a wrong answer given in an earlier part of a question is used correctly in answer to a later part of the same question.

Candidates must make their meaning clear to the examiner to gain the mark. Make sure that the answer makes sense. Do not give credit for correct words/phrases which are put together in a meaningless manner. Answers must be in the correct context.

Quality of Written Communication

Questions which involve the writing of continuous prose will expect candidates to:

• write legibly, with accurate use of spelling, grammar and punctuation in order to make the meaning clear

• select and use a form and style of writing appropriate to purpose and to complex subject matter

• organise information clearly and coherently, using specialist vocabulary when appropriate.

Full marks will be awarded if the candidate has demonstrated the above abilities. Questions where QWC is likely to be particularly important are indicated (QWC) in the mark scheme, but this does not preclude others.

Section A

Question Number	Answer	Mark
1	The only correct answer is A (carbon dioxide, CO ₂)	(1)
	B is not correct because copper is a solid at 298 K and 1 atm pressure so has the lowest entropy	
	C is not correct because ethanol is a liquid at 298 K and 1 atm pressure and has a lower entropy than a gas	
	D is not correct because hydrogen is also a gas at 298 K and 1 atm pressure, but its molecules are smaller than carbon dioxide molecules	

Question Number	Answer	Mark
2	The only correct answer is B(reactions P and Q only)	(1)
	A is not correct because both reactions P and Q have a positive value for ΔS_{total}	
	C is not correct because reaction R has a negative value for ΔS_{total} so is not feasible	
	D is not correct because both reactions R and S have a negative value for ΔS_{total} so are not feasible	

Question Number	Answer	Mark
3	The only correct answer is A $(\frac{1}{2}Br_2(1) \rightarrow Br(g))$	(1)
	B is not correct because the standard enthalpy change of atomisation refers to the formation of 1 mol of atoms	
	C is not correct because bromine's standard state is as a liquid	
	D is not correct because bromine exists as diatomic molecules in the liquid state in its standard state and only 1 mol of atoms should be formed	

Question Number	Answer	Mark
4(a)	The only correct answer is C (potassium bromide)	(1)
	A is not correct because the least exothermic lattice energy is between the largest ions with the smallest charge and calcium ions are smaller and have a higher charge than potassium ions	
	B is not correct because the least exothermic lattice energy is between the largest ions with the smallest charge and magnesium ions are smaller and have a higher charge than potassium ions	
	D is not correct because sodium ions are smaller than potassium ions	

Question Number	Answer	Mark
4(b)	The only correct answer is B (magnesium chloride)	(1)
	A is not correct because Ca^{2+} ions are larger than magnesium ions so will polarise less	
	C is not correct because K^+ ions are larger than magnesium ions and have a lower charge so will polarise less	
	D is not correct because Na ⁺ ions are larger than magnesium ions and have a lower charge so will polarise less	

Question Number	Answer	Mark
5	The only correct answer is C(the total entropy when KCl dissolves is positive)	(1)
	A is not correct because the enthalpy change of hydration for all ions and lattice energy for all ionic compounds are exothermic so this does not explain why KCl is soluble	
	\boldsymbol{B} is not correct because the enthalpy change of hydration for all ions and lattice energy for all ionic compounds are exothermic	
	D is not correct because the total entropy must be positive for a spontaneous reaction	

Question Number	Answer	Mark
6	The only correct answer is A (3.61×10^{-5})	(1)
	B is not correct because R and ΔS_{total} are the wrong way up	
	C is not correct because the temperature should not be included	
	D is not correct because the negative sign for ΔS_{total} has been omitted	

Question Number	Answer	Mark
7		(1)
	The only correct answer is A $(CH_3COCH_3 + H^+ \rightleftharpoons CH_3C(O^+H)CH_3 \text{ fast,}$	
	$CH_{3}C(O^{+}H)CH_{3} \rightarrow CH_{3}C(OH) = CH_{2} + H^{+} \text{ slow, } CH_{3}C(OH) = CH_{2} + I_{2} \rightarrow CH_{3}COCH_{2}I + HI \text{ fast})$	
	B is not correct because the steps up to and including the slow step must include CH_3COCH_3 and H^+ ions and I_2 must only be involved in a fast step	
	<i>C</i> is not correct because the steps up to and including the slow step must include CH ₃ COCH ₃ and H^+ ions and I_2 must only be involved in a fast step	
	D is not correct because the steps up to and including the slow step must include CH ₃ COCH ₃ and H^+ ions and I ₂ must only be involved in a fast step	

Question Number	Answer	Mark
8	The only correct answer is C (1.0×10^{-3})	(1)
	A is not correct because the initial rate and the rate constant have been mixed up	
	B is not correct because [A] has not been squared	
	D is not correct because [B] has been included	

Question Number	Answer	Mark
9(a)	The only correct answer is B(1.95)	(1)
	A is not correct because pK_a has not been converted to K_a	
	C is not correct because this is the pH of 0.100 mol dm^{-3} ethanoic acid	
	D is not correct because the square root of $K_a x$ [CH ₂ ClCOOH] has not been used to calculate [H ⁺]	

Question Number		Answer	Mark
9(b)	The only correct answer is C	(Acid: CH ₂ ClCOOH, Conjugate base: CH ₂ ClCOO ⁻)	(1)
	A is not correct because ethanoic acid reaction	d has a higher pK _a than chloroethanoic acid so acts as a base in this	
	B is not correct because ethanoic acid reaction	d has a higher pK _a than chloroethanoic acid so acts as a base in this	
	D is not correct because chloroethan	oic acid loses a proton when it acts as an acid	

Question Number	Answer	Mark
10(a)	The only correct answer is B (region U)	(1)
	A is not correct because in region T there is only aqueous ammonia at the start of the titration	
	C is not correct because in region V , the vertical part of the graph, represents the end-point of the titration	
	D is not correct because in region W all the aqueous ammonia has been neutralised	

Question Number	Answer	Mark
10(b)	The only correct answer is A (methyl red)	(1)
	B is not correct because phenol red has a pH range of 6.8 to 8.4 and 8.4 is not in the vertical region	
	C is not correct because phenolphthalein has a pH range of 8.2 to 10.0 and this is not in the vertical region	
	D is not correct because thymol blue has a pH range of 1.2 to 2.8 and this is not in the vertical region	

Question Number	Answer	Mark
10(c)	The only correct answer is B(5.8)	(1)
	 A is not correct because this is the approximate pH when excess hydrochloric acid has been added C is not correct because this is the approximate pH near the start of the end point when there is still excess aqueous ammonia D is not correct because this is the approximate pH of aqueous ammonia 	

Question Number	Answer	Mark
11	The only correct answer is B $(9.77 \times 10^{-2} \pmod{\text{dm}^{-3}})$	(1)
	A is not correct because the two volumes have been reversed	
	C is not correct because a mole ratio of 1:1 has been used instead of 1 mol of acid : 2 mol NaOH	
	D is not correct because a mole ratio of 2 mol of acid : 1 mol NaOH has been used	

Question Number	Answer	Mark
12	The only correct answer is C (tertiary only)	(1)
	A is not correct because primary bromoalkanes react by an $S_N 2$ mechanism and the product would be optically active	
	B is not correct because secondary bromoalkanes react by an S_N1 or an S_N2 mechanism and the product could be optically active	
	D is not correct because primary and secondary bromoalkanes react by S_N1 and S_N2 mechanisms and the products could be optically active	

Question Number	Answer	Mark
13	The only correct answer is D	(1)
	A is not correct because this is an aldehyde and it would give a silver mirror with Tollens' reagent	
	B is not correct because this is an aldehyde and it would give a silver mirror with Tollens' reagent	
	C is not correct because this is an aldehyde and it would give a silver mirror with Tollens' reagent	

Question Number	Answer	
14	The only correct answer is C (CH ₃ COONa and CH ₃ CH ₂ CH ₂ OH) A is not correct because ethanoic acid reacts with NaOH to form the sodium salt	
	 B is not correct because ethanoic acid reacts with NaOH to form the sodium salt and propan-1-ol does not react with NaOH D is not correct because propan-1-ol does not react with NaOH 	

Question Number	Answer	Mark
15	The only correct answer is C(90.5 %)	(1)
	A is not correct because the molar masses have been used for the incorrect substances and the amount of ethanoic acid should be the numerator of the fraction	
	<i>B</i> is not correct because the masses have not been converted into moles and the amount of ethanoic acid should be the numerator of the fraction	
	D is not correct because the masses have not been converted into moles	

Question Number	Answer	Mark
16	The only correct answer is D (weak attraction to stationary phase, strong attraction to mobile phase)	(1)
	A is not correct because if there was a strong attraction to the stationary phase the component would not move very far and would have a low R_f value	
	B is not correct because if there was a weak attraction to the mobile phase the component would not move very far and would have a low R_f value	
	C is not correct because if there was a weak attraction to the mobile phase the component would not move very far and would have a low R_f value	

(Total for Section A = 20 marks)

Section B

Question Number	Answer	Additional Guidance	Mark
17(a)(i)	 An answer that makes reference to the following point: it / lactic acid is non-superimposable on its mirror image 	Allow there are four different atoms / groups attached to a carbon (atom) Allow it is chiral / has a chiral centre / has a chiral carbon (atom) / has an asymmetric carbon (atom) Ignore rotates the plane of plane-polarised light	(1)
		Do not award four different molecules attached to a carbon (atom)	

Question Number	Answer	Additional Guidance	Mark
17(a)(ii)	 An answer that makes reference to the following point: it is a racemic mixture or contains equal amounts of the two enantiomers / (optical) isomers 	Allow rotations caused by both enantiomers / isomers cancel Ignore just contains two enantiomers / isomers	(1)
		Do not award plane-polarised light cannot pass through the solution	

Question Number	Answer	Additional Guidance	Mark
17(a)(iii)	• CH ₂ =CHCOOH	Allow any combination of structural or displayed formulae or skeletal formulae / COOHCH=CH ₂	(1)

Question Number	Answer		Additional Guidance	Mark
17(b)	 X: butan-1-ol or or OH or CH₃CH₂CH₂CH₂OH / CH₃(CH₂)₂CH₂OH 	(1)	Mark independently If names and formulae are given, both must be correct but penalise missing H from carbon chain displayed formulae once only Allow any combination of skeletal, structural or displayed formulae Ignore molecular formulae for X , Y and Z Ignore butanol / C4H9OH Do not award CH3CH2CH2CH3O Do not award butanal	(3)
	• Y: phosphorus(V) chloride / phosphorus pentachloride / PCl5	(1)	Allow phosphorus(III) chloride / PCl ₃ / thionyl chloride / SOCl ₂ Do not award hydrochloric acid / HCl	
	 Z: N-methylbutanamide or Or Or Or Or Or CH₃CH₂CH₂CONHCH₃ / CH₃(CH₂)₂CONHCH₃ 	(1)	Ignore methylbutanamide / butanamide in addition to a correct structure Allow NH in skeletal formula Do not award CH ₃ CH ₂ CH ₂ COHNCH ₃ / CH ₃ CH ₂ CH ₂ COCH ₃ NH	

Question Number	Answer		Additional Guidance	Mark
17(c)			Allow monomers in either order Allow any combination of structural or displayed formulae / skeletal formulae Allow OH	(2)
			Ignore bond lengths and bond angles	
			Penalise OH-C on left of molecules once only Penalise missing H from carbon chain displayed formulae once only	
	• Monomer 1			
	носон сон 	(1)		
	• Monomer 2 H = 0 = 0 = 0 = 0 = 0 = 0 = 0 = 0 = 0 =		Accept cis isomers	
	or			
		(1)		

Question Number	Answer	Additional Guidance	Mark
17(d)(i)	• C ₅ H ₁₀ O ₂	Allow symbols in any order Ignore any working Ignore + charge	(1)

Question Number	Answer	Additional Guidance	Mark
17(d)(ii)	• E is not a carboxylic acid or does not contain COOH (group)	If name and formula are given, both must be correct Allow E is not an acid Do not award additional functional groups	(1)

Question Number	Answer	Additional Guidance	Mark
17(d)(iii)	• E is an ester	Ignore saturated / -COO- / C=O	(1)
		Do not award additional functional groups	

Question Number	Answer		Additional Guidance	Mark
17 (d)(iv)			Example of structure:	(3)
	 structure of E 2 or 3 proton environments correct 4th proton environment correct 	(1)(1)(1)		
	• 4 proton environment correct		Protons can be circled and labelled or just labelled Allow labels using data from the table	
			Only 1 proton from each group needs to be labelled	
			Allow whole groups to be labelled, including the carbon atom	
			(Total for Question $17 - 14$ m	

(Total for Question 17 = 14 marks)

Question Number	Answer	Additional Guidance	Mark
18(a)(i)	• no effect / none / nothing / no change	Ignore references to rate	(1)

Question Number	Answer		Additional Guidance	Mark
18(a)(ii)	An explanation that makes reference to the following points:			(2)
	 (equilibrium) yield (of sulfur trioxide / SO₃ / product) decreases 	(1)	Allow less sulfur trioxide / SO ₃ / product forms Ignore equilibrium position shifts to the left Ignore more reactants formed	
	 the equilibrium constant / K_p / K_c / K decreases (as temperature increases) and because the (forward / right) reaction is exothermic / releases heat (energy) / ΔH is negative 	(1)	Allow the equilibrium constant / K_p / K_c / K decreases (as temperature increases) and because the reverse / backward / left reaction is endothermic / absorbs heat (energy) Allow K decreases because $\Delta S_{surroundings}$ / ΔS_{total} decreases / becomes less positive (as temperature increases and assuming ΔS_{system} is constant) Ignore reference to rate	

Question Number	Answer	Additional Guidance	Mark
18(a)(iii)	• expression for K_p	Example of expression for K_p : $K_p = \frac{p(SO_3(g))^2}{p(SO_2(g))^2 (x) p(O_2(g))}$	(1)
		Allow $P/PP/pp$ etc for partial pressure and this can be inside the brackets Allow e.g. p^2SO_3	
		Ignore missing (g) / brackets around formulae	
		Do not award square brackets	

Question Number	Answer			Additional (Juidance		Mark
18(a)(iv)		Example of calculation:				(4)	
				SO ₂	O 2	SO ₃	
			Initial mol	2.00	1.00	-	
	• calculation of eqm moles	(1)	Eqm mol	2.00 - 1.60	1.00 - 0.80	1.60	
				= 0.40	= 0.20		
			Total mol at eqm	0.40 +	0.20 + 1.60 = 2.5	20	
	• calculation or expressions for 3 partial		Partial pressure	0.40 x 5.00	<u>0.20 x 5.00</u>	1.60 x 5.00	
	pressures	(1)	/atm	2.20	2.20	2.20	
	1			= 0.90909	= 0.45455	= 3.6364	
	• substitution of values into <i>K</i> _p	(1)	TE for partial pressur	es on eqm moles			
	expression	(1)	K 2 C2C1 ²				
	 calculation of K_p and 		$K_{\rm p} = \frac{3.6364^2}{0.90909^2 \mathrm{x} 0.454}$	55			
	answer to 2 / 3 SF		$= 35.2 / 35 \text{ atm}^{-1}$				
	and		TE on expression for	$K_{\rm p}$ in (a)(iii)			
	units	(1)	1	r ()()			
			Allow answer from p 0.45 and 3.6 gives 34		ounding to 2 or m	nore SF e.g. 0.91,	
			Penalise incorrect rou		e.g. 0.909 to 0.9		
			Allow fractions in we	orking but not in f	final answer		
			Allow atm ⁻ for units		•		
			Allow correct units w	vritten in (a)(iii) if	f not written here		
			Correct answer to 2 c	or 3 SF with units	and no working	scores (4)	

Question Number	Answer	Additional Guidance	Mark
18(b)(i)	• calculation of mass of H ₂ SO ₄ in 1 dm ³ (1)	Example of calculation: mass of H_2SO_4 in 1 dm ³ concentrated acid = 0.985 x 1800 = 1773 (g)	(2)
	• calculation of concentration of acid (1)	concentration of acid = $\frac{1773}{(2 \text{ x } 1.0) + 32.1 + (4 \text{ x } 16.0)}$ = 18.073 / 18.07 / 18.1 / 18 (mol dm ⁻³) TE on mass of H ₂ SO ₄ in 1 dm ³ Allow 98 for molar mass of H ₂ SO ₄ giving 18.092 / 18.09 / 18.1 / 18 (mol dm ⁻³) Correct answer to 3 or more SF with no working scores (2) Do not award (2) for 18 unless 0.985 has been used in calculation	

Question Number	Answer	Additional Guidance	Mark
18(b)(ii)	• calculation of [H ⁺ (aq)] / [H ₃ O ⁺ (aq)]	Example of calculation:	(1)
		$[H^+(aq)] / [H_3O^+(aq)] = 10^{-0.97}$ = 0.10715 / 0.1072 / 0.107 / 0.11 (mol dm ⁻³)	
		Ignore SF except 1 SF Ignore incorrect units	
		Correct answer with no working scores (1) Do not award $0.1 / 0.10 / 0.214$	

Question Number	Answer		Additional Guidance	Mark
18(b)(iii)	An explanation that makes reference to the following points:		Allow [H ⁺ (aq)] for [H ₃ O ⁺ (aq)] Ignore missing state symbols	(2)
	 First equilibrium the first ionisation of sulfuric acid is complete or the equilibrium position of the first equation lies very far to the right 	(1)	Allow high [H ₃ O ⁺ (aq)] from first equilibrium Allow acid fully dissociates in first equilibrium Ignore just acid fully dissociates	
	 Second equilibrium so [H₃O⁺(aq)] (from the second equilibrium) is very small 	(1)	Allow second equilibrium shifts to the left Allow second dissociation is suppressed / further dissociation is prevented	

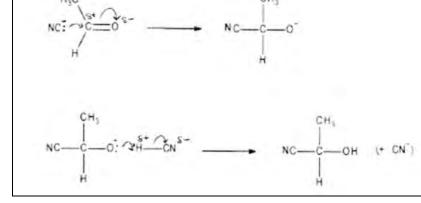

Question Number	Answer		Additional Guidance	Mark
18(c)(i)			Allow equations in either order	(2)
			Allow ≓ provided equations written in directions shown	
			Ignore state symbols even if incorrect	
			Penalise non-ionic equations once only e.g. using HCl and NaOH	
	• $HSO_4^- + OH^- \rightarrow SO_4^{2-} + H_2O$	(1)	Allow $HSO_4^- \rightarrow SO_4^{2-} + H^+$ and $H^+ + OH^- \rightarrow H_2O$	
	• $SO_4^{2-} + H^+ \rightarrow HSO_4^-$		for M1	
	or SO ₄ ²⁻ + H ₃ O ⁺ \rightarrow HSO ₄ ⁻ + H ₂ O	(1)		

Question Number	Answer		Additional Guidance	Mark
18(c)(ii)	• calculation of the concentration of SO ₄ ²⁻ ions	(1)	Example of calculation: $[SO_4^{2^-}] = \frac{25.0 \text{ x } 0.150 \text{ x } 1000}{1000}$ $= 0.0375 \text{ (mol dm}^{-3}\text{)}$ Allow mol SO ₄ ²⁻ = 0.00375 / 3.75 x 10 ⁻³ (mol)	(5)
	• calculation of the concentration of HSO ₄ ⁻ ions	(1)	$[HSO_4^-] = \frac{75.0 \text{ x } 0.100}{1000} \text{ x } \frac{1000}{100}$ = 0.075 (mol dm ⁻³) Allow mol HSO ₄ ⁻ = 0.0075 / 7.5 x 10 ⁻³ (mol) Do not award this mark if subtraction then done	
	• expression for <i>K</i> _a	(1)	$K_{a} = \frac{[H^{+}][SO_{4}^{2^{-}}]}{[HSO_{4}^{-}]} / 0.012 = \frac{[H^{+}] \times 0.0375}{0.075}$ Allow mol substituted into correct expression	
	 re-arrangement of expression and calculation of [H⁺] 	(1)	$[H^{+}] = \frac{K_{a}[HSO_{4}^{-}]}{[SO_{4}^{2^{-}}]} = \frac{0.012 \times 0.075}{0.0375}$ $= 0.024 \text{ (mol dm}^{-3}\text{)}$ TE on expression, [SO ₄ ^{2^{-}}] and [HSO ₄ ⁻] or mol	
	• calculation of pH	(1)	pH = -log[H ⁺] = -log 0.024 =1.6198 / 1.620 / 1.62 / 1.6 TE on [H ⁺]	
			Ignore SF except 1 SF Correct answer without working scores (5)	
			Allow alternative methods (Total for Question 18 – 20	

(Total for Question 18 = 20 marks)

Question Number	Answer	Additional Guidance	Mark
19(a)	• C ₁₀ H ₁₈ O	Allow symbols in any order i.e. C10OH18 / H18C10O / H18OC10 / OC10H18 / OH18C10	(1)
		Allow large numbers e.g. C10H18O	
		Do not award superscripts e.g. C ¹⁰ H ¹⁸ O	

Answer		Additional Guidance	Mark
An answer that makes reference to the following points:		Penalise an incorrect dipole in M1 and M4 once only Penalise curly arrow not starting from lone pair once only in M1 and M4 Penalise half arrow-heads once only	(4)
 curly arrow from lone pair on C of CN⁻ towards C of aldehyde group 	(1)	Allow CN ⁻ to attack C=O from any angle Allow CN bond displayed	
 curly arrow from C=O to, or just beyond, O and dipole on C=O 	(1)		
• intermediate	(1)	If M1 lost as curly arrow from N of CN ⁻ , allow CN joined to carbon through N Ignore connectivity for vertical CN groups	
 curly arrow from lone pair on O⁻ to H and curly arrow from H-CN bond to anywhere on CN and final organic product 	(1)	Allow curly arrow from lone pair on O^- to H^+ Ignore missing dipole in HCN	
	 An answer that makes reference to the following points: curly arrow from lone pair on C of CN⁻ towards C of aldehyde group curly arrow from C=O to, or just beyond, O and dipole on C=O intermediate curly arrow from lone pair on O⁻ to H and curly arrow from H-CN bond to anywhere on 	An answer that makes reference to the following points: • curly arrow from lone pair on C of CN ⁻ towards C of aldehyde group (1) • curly arrow from C=O to, or just beyond, O and dipole on C=O (1) • intermediate (1) • curly arrow from lone pair on O ⁻ to H and curly arrow from H-CN bond to anywhere on (1)	An answer that makes reference to the following points: Penalise an incorrect dipole in M1 and M4 once only Penalise curly arrow not starting from lone pair once only in M1 and M4 Penalise half arrow-heads once only • curly arrow from lone pair on C of CN ⁻ towards C of aldehyde group (1) • curly arrow from C=O to, or just beyond, O and dipole on C=O (1) • intermediate (1) If M1 lost as curly arrow from N of CN ⁻ , allow CN joined to carbon through N Ignore connectivity for vertical CN groups • curly arrow from lone pair on O ⁻ to H and curly arrow from H-CN bond to anywhere on

Question Number	Answer	Additional Guidance	Mark
19 (c)(i)	• CH ₃ CO- / -COCH ₃ / methyl ketone	Allow any combination of structural / displayed formula or skeletal formula	(1)
		Allow methyl next to ketone / methyl and ketone / methylcarbonyl	
		Allow CH ₃ COR / RCOCH ₃	
		Ignore missing continuation bond from structures	
		Do not award ethanal / methyl secondary alcohol / a specific compound	

Question Number	Answer	Additional Guidance	Mark
19(c)(ii)	 any 2 skeletal formulae (1) remaining 2 skeletal formulae (1) 	Examples of skeletal formulae:	(2)

Answer		Additional Guidance	Mark
	Exa	mple of displayed formula: $H \rightarrow 4$	(2)
	н-		
• displayed formula of F	(1) Allo	ow CH ₃	
• carbon atoms labelled	(1) Allo ator	w other unambiguous labels for the carbon	
		ow M2 for labels on structural / skeletal nulae, including labels on formulae in (c)(ii)	

Ignore reference to singlet / splitting patterns

Question

Number 19(c)(iii)

Question Number		Answer		Additional Guidance	Mark
19(d)*	logically structured reasoning. Marks are awarded is structured and sl The following tabl indicative content. Number of indicative marking points seen in answer 6 5–4 3–2 1 0	d answer with linkage d for indicative conten- hows lines of reasonin e shows how the mark Number of marks awarded for indicative marking points 4 3 2 1 0 e shows how the mark	t and for how the answer	Guidance on how the mark scheme should be applied: The mark for indicative content should be added to the mark for lines of reasoning. For example, an answer with five indicative marking points that is partially structured with some linkages and lines of reasoning scores 4 marks (3 marks for indicative content and 1 mark for partial structure and some linkages and lines of reasoning). If there are no linkages between points, the same five indicative marking points would yield an overall score of 3 marks (3 marks for indicative content and no marks for linkages).	(6)

Answer shows a coherent and logical	Number of marks awarded for structure of answer and sustained line of reasoning 2	In general it would be expected that 5 or 6 indicative points would get 2 reasoning marks, and 3 or 4 indicative points would get 1 mark for reasoning, and 0, 1 or 2 indicative points would score zero marks for reasoning.	
structure with linkages and fully sustained lines of reasoning demonstrated throughout.			
Answer is partially structured with some linkages and lines of reasoning.	1		
Answer has no linkages between points and is unstructured.	0	Additional incorrect chemistry loses a structure and lines	
Comment: Look for the indicative marking points f mark for structure of answer and sustain		of reasoning mark (if 1 or 2 have been awarded).	

In	dicative content	Allow dispersion forces / van der Waals' forces /	(6)
•	IP1 London forces Pentane (only) has London forces / all have London forces	forces between an instantaneous dipole and an induced dipole for London forces throughout answer Do not award IP1 if any other forces mentioned	
•	 IP2 Butanal Butanal (also) has (permanent) dipole-dipole interactions IP3 Propanoic acid Propanoic acid (also) has (dipole-dipole and) hydrogen bonding 	Allow dipole-dipole forces / attractions / bonds Do not award IP2 if hydrogen bonding included	
•	IP4 Intermolecular forces The London forces have about the same strength as they have a similar number of electrons / pentane has 42, butanal has 40 (and propanoic acid has 40 electrons) or butanal has dipole-dipole interactions because it is polar / has a dipole on C=O or propanoic acid has hydrogen bonding because it contains OH / COOH group	Allow similar relative molecular masses (butanal 72, pentane 72, propanoic acid 74) Do not award incorrect numbers of electrons / relative molecular masses Allow dipole-dipole interactions linked to C=O Allow diagram of hydrogen bond between two molecules Ignore formation of dimer	
•	IP5 Butanal and pentane Dipole-dipole interactions are stronger than London forces or more energy is needed to overcome the dipole-dipole interactions than London forces	Allow London forces are the weakest (intermolecular force) Do not award if covalent bonds broken or explanation is about intermolecular forces with water	
•	IP6 Butanal and propanoic acid Hydrogen bonding is stronger than dipole-dipole interactions or more energy is needed to overcome hydrogen bonding than dipole- dipole interactions	Allow hydrogen bonding is the strongest (intermolecular force) Do not award if covalent bonds broken or explanation is about intermolecular forces with water

Question Number	Answer		Additional Guidance	Mark
20(a)			Example of calculation:	(5)
	• substitution of values into expression for ΔS_{system}	(1)	$\Delta S_{\text{system}} = (2 \text{ x } 95.9) + (3 \text{ x } 205.0) - (2 \text{ x } 149.2)$ Allow 191.8 + 615.0 - 298.4 / 806.8 - 298.4	
	• calculation of ΔS_{system}	(1)	$\Delta S_{\text{system}} = (+)508.4 \text{ (J } \text{K}^{-1} \text{ mol}^{-1})$	
	• substitution of values into expression for $\Delta S_{\text{surroundings}}$	(1)	$\Delta S_{\text{surroundings}} = -\frac{(-67.2)}{298}$	
	• calculation of $\Delta S_{\text{surroundings}}$	(1)	$\Delta S_{\text{surroundings}} = (+)0.2255 \text{ (kJ } \text{K}^{-1} \text{ mol}^{-1}\text{)}$ or (+)225.5 (J $\text{K}^{-1} \text{ mol}^{-1}$)	
	• calculation of ΔS_{total}	(1)	$\Delta S_{\text{total}} = 508.4 + 225.5 = (+)733.9 \text{ (J K}^{-1} \text{ mol}^{-1})$ or (+)0.7339 (kJ K ⁻¹ mol ⁻¹) TE on calculated values for ΔS_{system} and $\Delta S_{\text{surroundings}}$ Do not award ΔS_{system} added to $\Delta S_{\text{surroundings}}$ in different units e.g. $508.4 + 0.2255 = 508.6255$ Ignore SF except 1 SF Units are not needed. Units in any order e.g. J mol ⁻¹ K ⁻¹ Penalise incorrect / incomplete units in ΔS_{total} but allow: e.g. J / mol/ K or J/mol.K mol ⁻ and K ⁻ in otherwise correct units Correct answer with no working scores (5)	

Question Number	Answer		Additional Guidance	Mark
20(b)(i)	 working for at least one half-life shown on graph 	(1)	Example of half-lives:	(3)
	• values of two half-lives	(1)	half-lives may be written or clearly shown on graph first half-life = 200 s and second half-life = 200 s \pm 20 s Allow 2 nd half-life = 400 - 200 = 200 s	
	 first order and because the half-lives are constant / the same / similar 	(1)	Stand alone mark Do not award zero order / second order	

Question Number	Answer	Additional Guidance	Mark
20(b)(ii)	An explanation that makes reference to the following points:	In M1 and M2, the working may be shown in the table Allow implied runs e.g. as [BrO ₃ ⁻] doubles (and [H ⁺] is constant), the rate doubles	(3)
	 first order with respect to BrO₃⁻ ions and because in runs 1 and 2 as [BrO₃⁻] doubles (and [H⁺] is constant) the rate doubles 		
	 in runs 1 and 3, as [BrO₃⁻] triples rate should triple (to 1.08 x 10⁻²) and [H⁺] also doubles and rate increases by a factor of 4 (1) 	Allow correct alternative explanations using runs 2 and 3 and others e.g. [BrO ₃ ⁻] triples, [H ⁺] doubles and rate x 12 Do not award just [H ⁺] doubles and rate x 4 with no mention of bromate ions	
	• so reaction is second order with respect to H ⁺ ions (1)	Stand alone mark	

Question Number	Answer		Additional Guidance	Mark
20(b)(iii)	• rate equation	(1)	rate = $k[Br^{-}(aq)][BrO_{3}^{-}(aq)][H^{+}(aq)]^{2}$ TE on orders in (a)(i) and (ii) Allow species in any order / R for rate / K for k Ignore missing state symbols If no order given in (a)(i), allow rate equation with Br ⁻ included or omitted	(2)
	• units of <i>k</i>	(1)	$dm^9 mol^{-3} s^{-1}$ Allow these in any order Allow $dm^9 mol^{-3} s^{-1}$ TE on rate equation	

Question Number	Answer		Additional Guidance	Mark
20(c)	 axes correct way around and suitable scale 	(1)	Points / line must cover at least half the grid in both directions ln <i>k</i> values must become more negative down the axis with negative signs shown Allow horizontal axis shown at bottom of graph	
	 both axes labelled and units for x axis 	(1)	y axis: ln k with no units on y axis and x axis: 0.0033 etc with $(1/T) / K^{-1}$ or 3.3 etc with $(1/T) / 10^{-3} K^{-1}$ or 3.3 x 10^{-3} etc with $(1/T) / K^{-1}$ or 3.3 etc with $(1/T) \times 10^3 / K^{-1}$ Brackets are not needed around $1/T$	
	 all points plotted correctly and best-fit straight line 	(1)	Allow $\pm \frac{1}{2}$ square Allow line covering points provided it is straight Ignore extrapolation in either direction	
	• calculation of gradient	(1)	This may be shown on the graph Allow gradient in the range (-)12800 to (-)13800 Allow gradient calculated from data in the table	
	• sign and units of gradient	(1)	If gradient not evaluated, allow correct working Negative sign and units K Allow $1/K^{-1}$ for units Allow -12.8 to -13.8 kK for M4 and M5	
	• calculation of activation energy	(1)	$E_{a} = 13167 \ge 8.31 / 1000 = 109.418$ Expected range 106 to 115 or 13167 $\ge 8.31 = 109418$ TE on gradient	
	• sign and corresponding units of activation energy	(1)	+ 109.418 kJ mol ⁻¹ or +109418 J mol ⁻¹ Allow kJ mol ⁻ or J mol ⁻ Ignore missing + but do not award – sign Penalise 1 SF for gradient and E_a value once only (Total for Question 20)
